# **FLOW MONITORING REPORT**

# Dashboard # 51 APRIL 2020

Reporting period: 1 to 30 April 2020

MALI

IOM works with national and local authorities to gain a better understanding of population movements throughout West and Central Africa. Flow Monitoring Points (FMPs) allow IOM to quantify and qualify migration flows, trends and routes at entry, exit and transit points (such as border crossing posts, bus stations, rest areas, police checkpoints and reception centres). Since July 2016, several Flow Monitoring Points have been progressively installed in important localities of Mali, particularly in the regions of Gao, Timbuktu, Kidal, Menaka, Mopti, Kayes, Segou, Sikasso and Bamako, to monitor the daily movements of migrants heading to West and North African countries.

This map is for illustrative purposes only. Representations do not imply a judgment on the legal status of a territory, nor official recognition or acceptance of these boundaries by IOM

In April 2020, the average daily number of individuals observed at the Flow Monitoring Points decreased by 55 per cent compared to the previous month. This decrease is due to border closures to stop the spread of COVID-19.

Nationals from Burkina Faso, Mali, Guinea-Conakry, Senegal and Gambia accounted for 83 per cent of all the migrants recorded at the Flow Monitoring Points.

Burkina Faso, Algeria, Mauritania, and the Niger are major transit countries for migrants after their stopover in Mali.

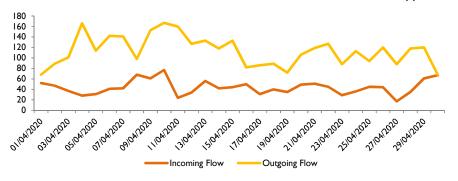

Economic migration, including long-term migration of more than six months (77% of flows) and seasonal migration (23% of flows), is the main observed type of movement.

# **DEFINITIONS USED**

**Incoming flows**: refers to migrants who arrive at a Flow Monitoring Point with the intention of travelling further into Mali.

Outgoing flows: refers to migrants who arrive at a Flow Monitoring Point with the intention of travelling towards the outer borders of Mali.

### **EVOLUTION OF FLOWS OF INDIVIDUALS OBSERVED IN APRIL 2020(\*)**

(\*) To avoid double counting, migrants recorded at the transit points of Bamako, Sevare, Wabaria (Gao) and Inhalid are not included in this total. Only those recorded at entry and exit points are considered. In addition, due to data completeness issues, Inhalid's FMP is now inactive.

#### NEXT DESTINATIONS OF OBSERVED MOVEMENTS BY TYPE OF

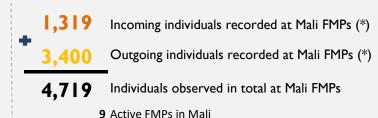

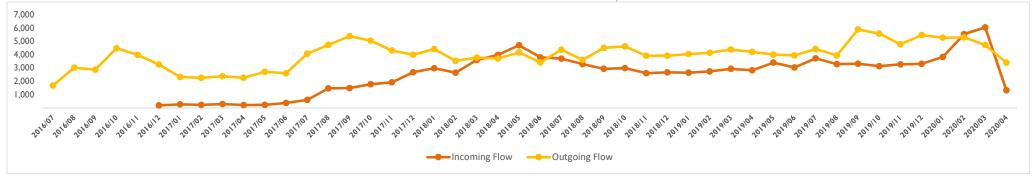

FLOW MONITORING POINTS Page 2

Most migrants travel through the capital city, Bamako, to the strategically located towns of Gao and Timbuktu, as well as through border areas such as Benena, Gogui and Heremakono, before heading towards Algeria, the Niger, Libya, Mauritania or Morocco. Some will ultimately travel on to Europe. Gao is an important transit point and is commonly favoured by migrants for its accessibility to routes leading to the Mediterranean sea. The majority of outgoing migrants identified at the Gao and Timbuktu FMPs continue through Algeria (primarily through the Algerian towns of Tamanrasset and Bordj). Migrants transiting through Benena and Heremakono travel on to Burkina Faso, while those transiting through Gogui travel on to Mauritania. Mali is also a transit country for incoming migrants, notably those who were unable to cross the Sahara desert and those returning to countries such as Guinea-Conakry, Côte d'Ivoire, Senegal and other countries in Sub-Saharan Africa. With the closure of the borders due to the Coronavirus pandemic, a gradual decline in daily flows is observed from 22 March to reach a very low level (one third of the average daily flows), hence a decrease in monthly flows. However, migrants have still found ways to cross officially closed borders.

Following the appearance of the first cases of COVID-19 in West Africa in March 2020, some decisions were taken by public authorities, including the closing of borders. Migrants who do not want to defer their plans to migrate find unofficial ways and means to cross officially closed borders despite the prohibition of people passing through. Although some manage to cross officially closed borders, a significant decline in the number of registered migrants was observed in April 2020 (a decrease of more than half compared to March). Indeed, incoming flows decreased by 74 per cent compared to the monthly average of the previous quarter, compared to 33 per cent for outcoming flows. It can then be noted that incoming flows are relatively more than 2 times affected compare to outcoming flows.

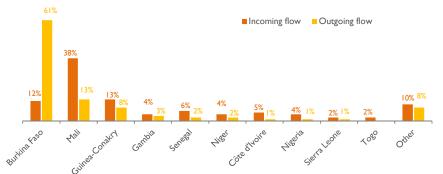

TOTAL NUMBER OF INCOMING AND OUTGOING INDIVIDUALS AT MALI FMPs BETWEEN I JULY 2016 AND 30 APRIL 2020 (\*\*)

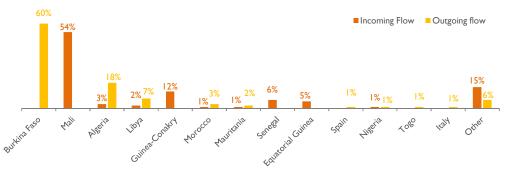

- (\*) To avoid double counting, migrants recorded at the transit points of Bamako, Sevare and Wabaria, are not included in this total. Only those recorded at entry and exit points are considered.
- (\*\*) The data collection on incoming flows at FMPs started in December 2016. Due to the new FMP set up since the start of June 2017, any significant deviation observed in the figures provided from that date should not be interpreted as a significant increase in migratory flows but as an increase in data collected.

#### MAIN NATIONALITIES OF MIGRANTS

Since the beginning of 2020, the flows of seasonal migrant from Burkina Faso continue to increase significantly. These migrants most often intend to travel to gold mining sites.

# MAIN INTENDED DESTINATIONS

European countries were declared as the final intended destination by 2 per cent of outgoing migrants.

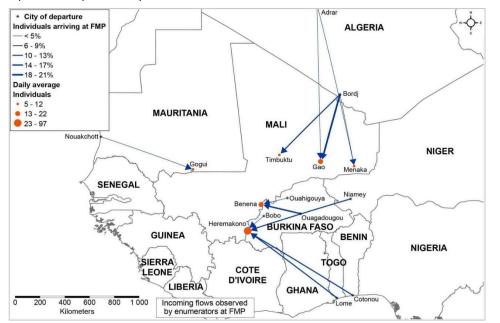

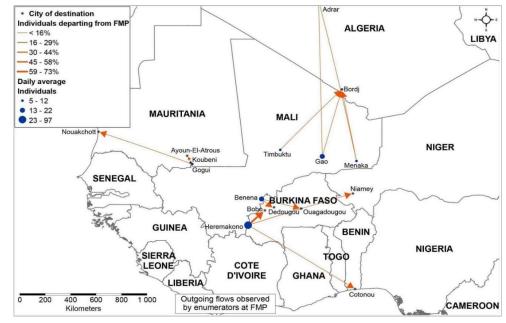

FLOW MONITORING POINTS

Page 3

Because of the difficulties in accessing entry and exit points in the Kidal region, and because data from the Inhalid FMP alone does not accurately reflect migration flows in the Kidal region, data collection at the Inhalid FMP has been stopped. To determine incoming and outcoming flows to and from Algeria, DTM used the data collected at the Gao, Timbuktu and Menaka FMPs where migrants headed for Algeria usually begin their journey.

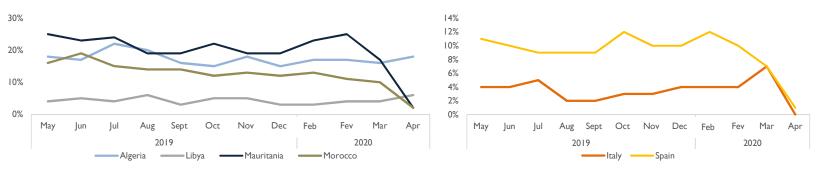

As a result, the figures presented in pages one through three of this report do not include the numbers collected from the Inhalid FMP, nor do they incorporate the numbers from the Bamako, Sevare or Wabaria FMPs, which are transit points and not points of entry or exit.

Base Map Source: ESRI. This map is for illustration purposes only. The depiction and use of boundaries, geographic names and related data shown on maps and included in this report are not warranted to be free of error nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by IOM.

### **EVOLUTION OF INTENDED FINAL DESTINATIONS BETWEEN 1 MAY 2019 AND 30 APRIL 2020**

The number of migrants wishing to travel to Europe through Algeria and Libya increased; however, migrants wishing to travel to Europe via Mauritania and Morocco is declining.

The number of migrants wishing to travel to Spain have again decreased. In April 2020, no migrant asserted he intended to go to Italy;

Yet, it should be noted that these figures indicate the intentions of migrants rather than confirmed destinations.

The FMPs are funded by the

Wabaria, located at the entrance of the city of Gao, is predominantly a crossing point for migrants travelling to Gao, coming from the South and the Centre of Mali or who have transited through those areas.

At this Flow Monitoring Point, data collectors identify migrants who wish to travel to North African and European countries. Most of them transit through Bamako to reach Gao, where they spend a couple of days before continuing their journey.

During the reporting period, most migrants transiting through the Wabaria FMP were nationals of Niger (32%), Mali (25%), Guinea-Conakry (19%), Burkina Faso (6%) and Nigeria (5%).

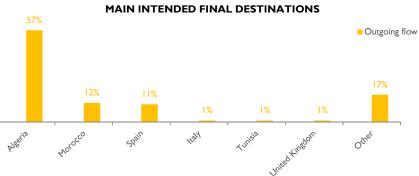

For outgoing flows, Algeria (57%), Morocco (12%) or Spain (11%) are the main destinations for migrants.

The average of daily flow observed in Wabaria increased by 11 per cent compared to last month. A similar increase could lead to the assertion that this FMP has not been as affected by COVID-19. Part of the reason is that Wabaria is a transit point, not an entry-exit point.

During the reporting period, 533 migrants were recorded at this FMP (Incoming flow: 145; Outgoing flow: 388).

Place Kidal is mainly an exit point for migrants leaving Gao.

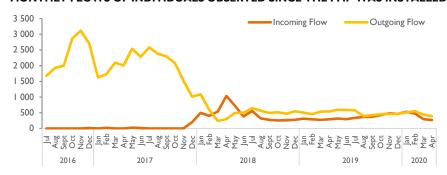

At this Flow Monitoring Point, the data collectors identify migrants who have spent a number of days in Gao in transit before travelling onwards, predominantly to North African and European countries. Incoming migrants who transit through Niger or Algeria and return to Mali or their countries of origin (Guinea-Conakry, Côte d'Ivoire) are also identified at this FMP.

During the reporting period, most migrants identified at Place Kidal FMP were nationals of Mali (45%), Guinea-Conakry (23%), Côte d'Ivoire (7%), Burkina Faso (5%) and Senegal (5%).

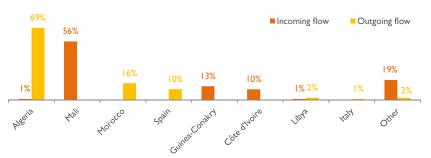

For outgoing flow, Algeria (69%), Morocco (16%) or Spain (10%) are the main destination destinations for migrants.

During the reporting period, 654 migrants were recorded at this FMP (Incoming flow: 270; Outgoing flow: 384). Although migrants continue their travel across this entry-exit point in northern Mali, a 19 per cent decrease in average of daily flow has been noted due to measures to stop the expansion of COVID-19.

TIMBUKTU

The Timbuktu Flow Monitoring Point is primarily a migrant exit point for outgoing flows in direction to North Africa.

At this Flow Monitoring Point, data collectors observe migrants who travel through Timbuktu before going on to North Africa and Europe.

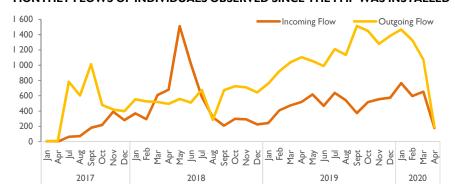

Incoming migrants who transit through Algeria and return to Mali are also identified at this FMP. Some identified migrants were also returning from Mauritania or Niger.

During the reporting period, most migrants identified at the Timbuktu FMP were nationals of Mali (41%), Guinea-Conakry (32%), Senegal (6%), Gambia (5%) and Niger (5%).

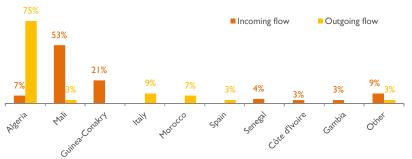

Most outgoing migrants reported either Algeria (75%), Italy (9%) or Morocco (7%) as their intended final destination.

During the reporting period, 369 migrants were recorded at this FMP (Incoming flow: 179; Outgoing flow: 190). The daily average of migrants registered at Timbuktu in April decreased drastically compared to March 2020. This decrease is equivalent to a drop of almost 80 per cent of the volume reported in March 2020.

MENAKA

### **TRAVELLERS' PROFILE**

(Data obtained through direct observation and during interviews with bus drivers and bus station managers. Variations calculated from previous month's data.)

The Menaka Flow Monitoring Point is located in the city of Menaka, in the Menaka region.

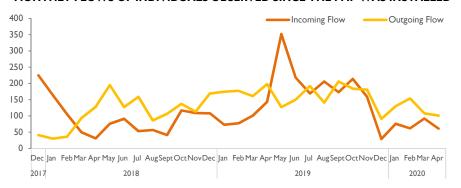

According to information received by data collectors, some migrants, following the reinforcement of security measures in the Niger, cross the Menaka border from the Niger into Mali in order to get to Algeria.

During the reporting period, most migrants identified at Menaka were Malians (41%), followed by nationals of the Niger (32%), Ghana (10%), Nigeria (8%), and Benin (3%).

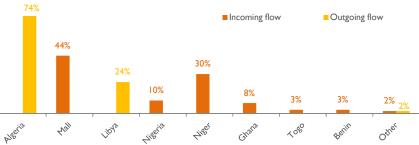

Most outgoing migrants reported Algeria (74%), followed by Libya (24%) as their intended final destination.

During the reporting period, 162 migrants were recorded at this FMP (Incoming flow: 61; Outgoing flow: 101). The daily average of the flow recorded in Ménaka remained constant in April compared to March 2020. Coronavirus does not seem to have affected Menaka FMP in April 2020.

The Sevare Flow Monitoring Point is a transit point located in Sevare town.

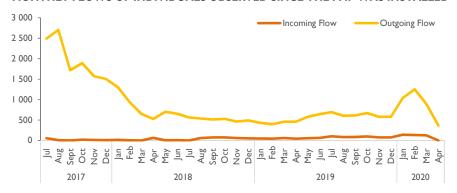

At this Flow Monitoring Point, data collectors observed migrants traveling to Gao and Timbuktu.

During the reporting period, most migrants identified at the Sevare FMP were of Guinea-Conakry (33%), Mali (21%), Burkina Faso (17%), Côte d'Ivoire (14%) and Senegal (9%).

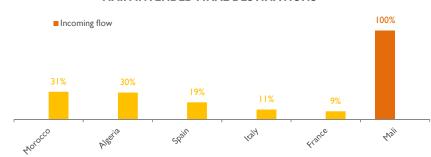

For outgoing migrants, Morocco (31%), Algeria (30%), Spain (19%), Italy (11%) and France (9%) are the main final destinations envisaged by migrants.

During the reporting period, 368 migrants were recorded at this FMP (Incoming flow : 2; Outgoing flow : 366). It corresponds to a 64 per cent decrease in the daily flow average recorded compared to March 2020.

The Gogui Flow Monitoring Point is located at the border post between Mali and Mauritania.

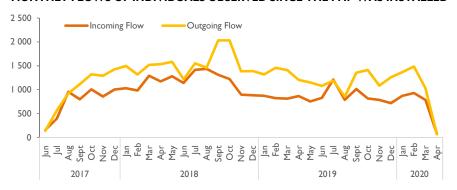

At this Flow Monitoring Point, data collectors identify outgoing flows of migrants travelling to Mauritania or Morocco. Some of them say they want to gather enough savings to continue their journey to Europe.

A large number of incoming migrants who had transited through Mauritania, or were deported from Mauritania and were returning to Mali were also identified at this FMP. Most expelled individuals obtain a pass and return to Mauritania.

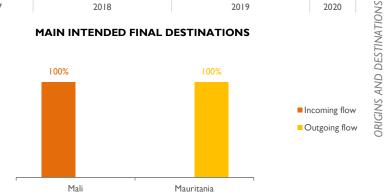

During the reporting period, all migrants identified at the Gogui FMP were nationals of Mali. The totality of outgoing migrants reported Mauritania as their intended final destination.

During the reporting period, 144 migrants were recorded at this FMP (Incoming flow: 78; Outgoing flow: 66). During this month, with mobility restriction related to the COVID-19 pandemic, the average of daily flows decreased to 92 per cent compared to March 2020.

The Benena Flow Monitoring Point is located at a border post between Mali and Burkina Faso, in the Segou region.

At this Flow Monitoring Point, data collectors observe outgoing flows of migrants who intend to travel to West and Central African, North African and European countries after having transited through Mali, Burkina Faso and Niger, as well as incoming migrants entering Mali after having transited through Burkina Faso.

During the reporting period, most migrants identified at Benena were nationals of Burkina Faso (67%), Mali (8%), Nigeria (6%), Benin (4%). and Togo (4%).

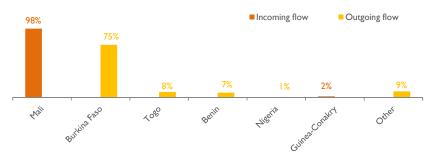

Most outgoing migrants reported either Burkina Faso (75%), Togo (8%) or Benin (7%) as their intended final destination.

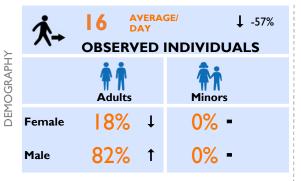

During the reporting period, 469 migrants were recorded at this FMP (Incoming flow: 243; Outgoing flow: 226). A decrease of more than half of the daily flows average of migrants compared to the records for the month of March, has been noted during the reporting period.

#### TRAVELLERS' PROFILE

(Data obtained through direct observation and during interviews with bus drivers and bus station managers. Variations calculated from previous month's data.)

The Heremakono Flow Monitoring Point is located at a border post between Mali and Burkina Faso, in the Sikasso region. At this Flow Monitoring Point, data collectors observe outgoing flows of migrants who intend to travel to West African, North African and European countries after having transited through Mali, Burkina Faso and Niger, as well as incoming flows of migrants who enter in Mali after having transited through Burkina Faso.

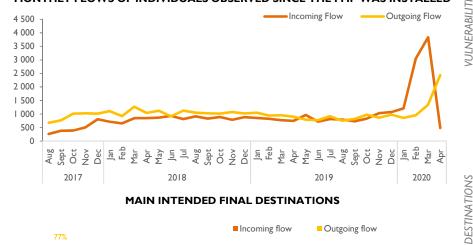

During the reporting period, most migrants identified at Heremakono were nationals of Burkina Faso (64%), Mali (9%) or Guinea-Conakry (6%).

For outgoing flows, Burkina Faso (77%), Libya (8%) or Algeria (6%) were the main intended final destinations, reported.

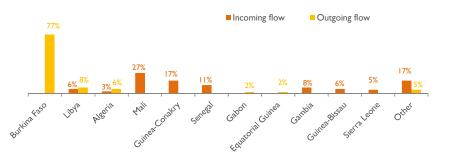

During the reporting period, 2,921 migrants were recorded at this FMP (Incoming flow: 488; Outgoing flow: 2.433).

The information collected at this FMP shows a notable number of migrants who declared that they came to Mali to work in the mining and agricultural regions, among other activities. From February 2020, an emphasis was placed on registration seasonal migration flows, hence the large numerous of seasonal migrants from February 2020. In April 2020, a decrease of 42 per cent of daily flow average compared to March 2020, has been noted. The closure of borders related to COVID-19 measures, is the main reason of this decrease.

AND

**BAMAKO** 

The capital city of Bamako is a major transit point for migrants travelling to West and North African countries.

In Bamako, migrant flows are recorded at bus stations where data collectors primarily observe migrants travelling to Gao or Timbuktu, as well as to border areas on their way to neighbouring countries such as Mauritania and Burkina Faso.

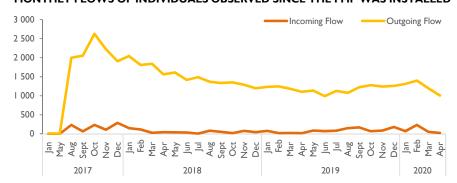

Most outgoing migrants reported either Algeria (49%), Niger (13%), Morocco (9%), Mauritania (8%), Spain (7%), France (7%) and Italy (5%) as their intended final destination.

During the reporting period, most migrants identified at the Bamako FMP were from Mali (31%), Guinea-Conakry (29%), Niger (15%), Burkina Faso (10%) and Côte d'Ivoire (4%).

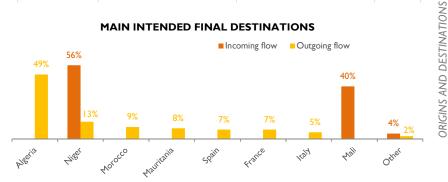

According to the information received from data collectors, migrants from Côte d'Ivoire transit through Sikasso, where they then travel to Mopti, bypassing Bamako. This explains the low number of Ivorian nationals observed at the Bamako FMP.

During the reporting period, 1,032 migrants were recorded at this FMP (Incoming flow: 24; Outgoing flow: 1,008). A decrease of 15 per cent on daily flow average has been observed in April, compared to March.

FLOW MONITORING POINTS
Page 13

# WHAT IS FLOW MONITORING?

Flow monitoring is a component of IOM's Displacement Tracking Matrix (DTM). It has been developed to track migrant flows (groups or individuals) through data collection carried out at key points of origin, transit and/or destination. The purpose of flow monitoring is to provide regularly updated information on the scale and profiles of population movements (migrants, internally displaced persons, returnees, etc.) through specific locations. The information and analysis provided through the flow monitoring methodology also helps to better understand and define shortcomings and priorities in the provision of assistance along the displacement/ migration routes. The purpose of flow monitoring is not to replace border monitoring or border surveillance. Data collected by IOM flow monitoring exercises does not replace government border controls and should not be interpreted as such.

# A BETTER UNDERSTANDING OF MIGRATION FLOWS - A REGIONAL INITIATIVE IN WEST AFRICA

Monitoring population movements in West and Central Africa represents an important regional initiative. It allows for a better understanding of intentions, trends, routes, and risks as well as demographic and socio-economic profiles of migrants. It serves as a common source of data contributing to inform policymaking by authorities in countries of origin, transit and destination. IOM aims to install over thirty of these flow monitoring points throughout the West and Central African region to assist in reducing the operational challenges of migration; advance understanding of migration issues; encourage social and economic development through migration; and uphold the human dignity and well-being of migrants.

METHODOLOGY Flows Monitoring of Populations (FMP) is an investigative work that aims to highlight areas that are particularly vulnerable to cross-border and intraregional migration. Areas of high mobility are identified across the country. DTM teams then work at the local level to identify strategic transit points. Trained agents collect data from key informants at the flow monitoring point: the latter may be bus station staff, police or customs officials, bus drivers or migrants themselves. A basic questionnaire mixed with direct observations allows to collect disaggregated data by gender and nationality. In Mali, ten data collection points are active in the regions of Gao, Timbuktu, Kidal, Menaka, Mopti, Sikasso, Segou, Kayes and the district of Bamako. Daily data collection is performed in the FMPs.

**LIMITATIONS** The data used in this analysis are estimates and represent only a part of the existing flows in Mali. The geographic and temporal coverage of these surveys is partial insofar as the flow monitoring activities do not cover some private bus stations existing in the various cities including Gao, Timbuktu, Kidal, Menaka, Mopti and Bamako. The data on the final destinations of migrants are obtained based on their declaration and must be taken with caution because they indicate only an intention. The data on the vulnerabilities are based on direct observations of the enumerators and must be taken only for information.

All data included in this report is based on estimations. IOM expressly disclaims all warranties of any kind, whether express or implied, including, but not limited to, the appropriateness, quality, reliability, timeliness, accuracy or completeness of the data included in this report.
