

Global Mobility Restriction Overview

Bi-Weekly Update • 25th June 2020

COVID-19 Mobility Impacts Update Series
<https://migration.iom.int> • dtmccovid19@iom.int

Overview

The global number of COVID-19 cases across the world have exceeded 9 million (9,129,146 cases and 473,797 deaths) as of 24th June 2020, according to the [World Health Organization](https://www.who.int). The COVID-19 impact on global mobility continues to vary depending on the different measures issued by Governments and authorities. As of 25th June 2020, a total of 219 countries, territories or areas have issued 68,721 travel restrictions, indicating an increase of two per cent from 67,572 restrictions recorded on 22nd June 2020. However, there has been an increase of ten per cent in medical restrictions and an increase of three per cent in other requirements such as new travel documents. In addition to this, there was a decrease of one per cent in the restriction on passengers arriving from specific countries, territories, or areas. In parallel to existing travel restrictions, a total of 169 countries, territories or areas have issued 647 exceptions enabling mobility despite blanket travel restrictions. Between 22nd and 25th June 2020, 4 countries, territories or areas have issued 8 new exceptions whilst 18 countries, territories or areas have removed 71 exceptions.

Most Commonly Imposed Restriction Types

*Other limitations include suspended visas on arrival and entry permits, requirements for international travel certificates and medical coverages.

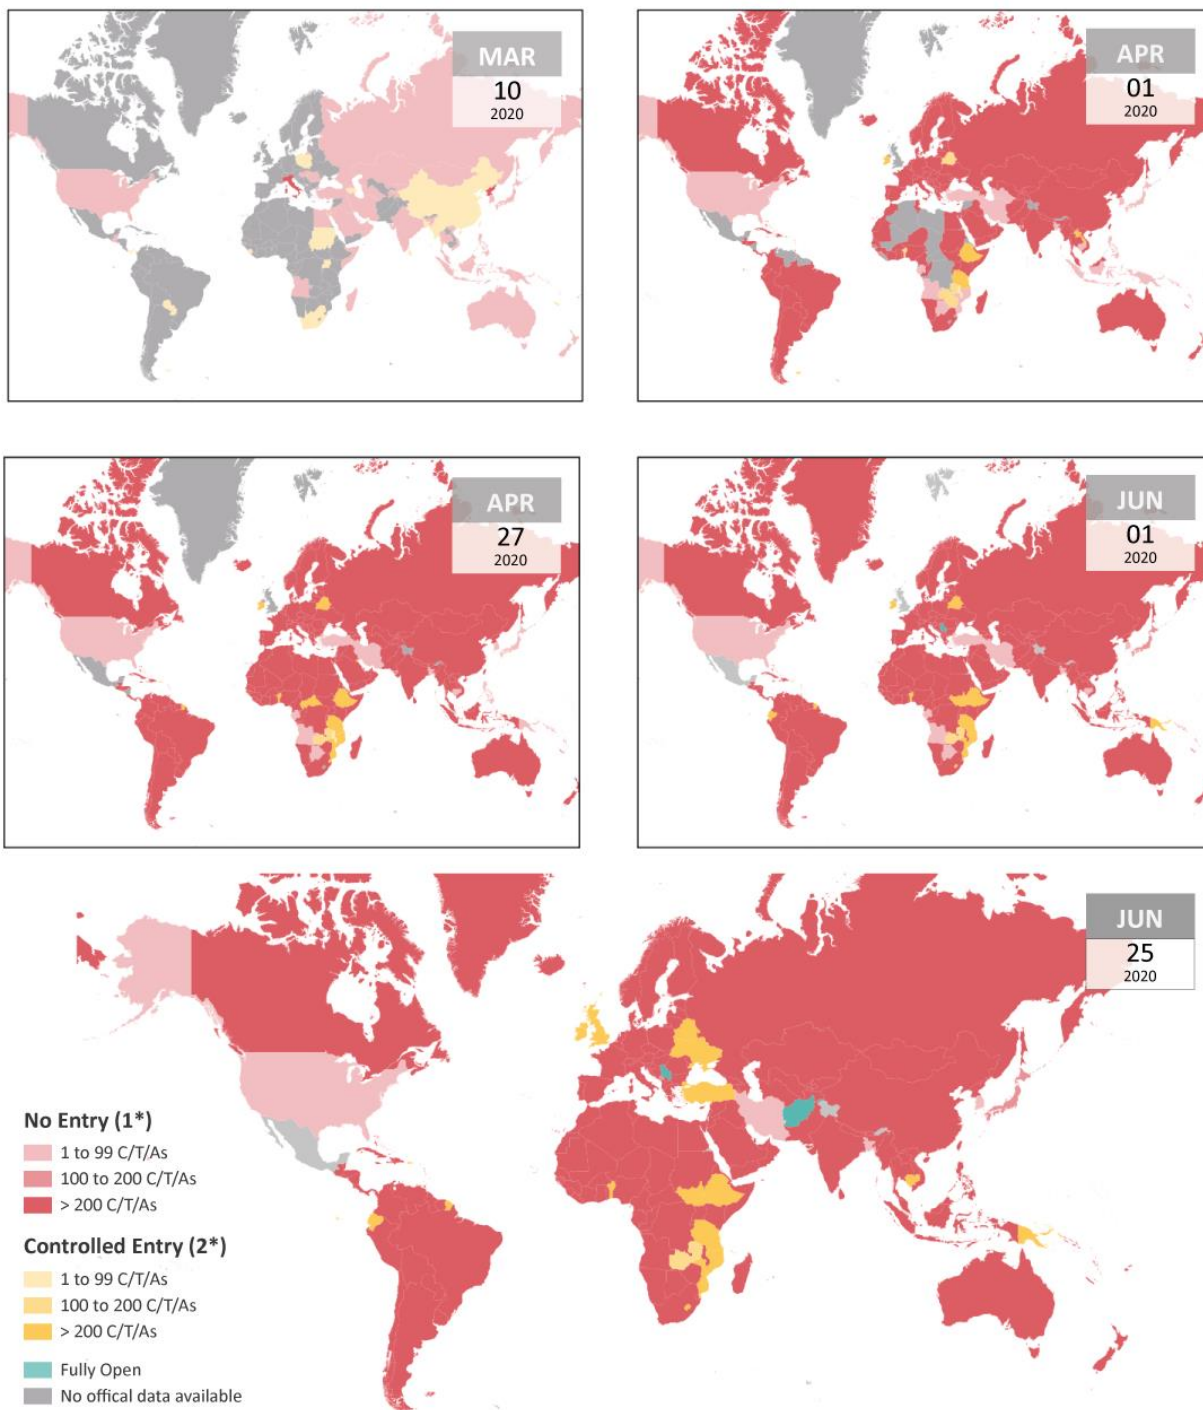

As of 25th June 2020, 219 C/T/As have imposed restrictions. Despite the stabilisation, entry restrictions for passengers from restricted C/T/As still had the highest share of the total restrictions (64%). Closure of borders has been a common and preferred response, followed by medical measures making up 24 per cent of the restrictions. Changes in visa requirements and entry restrictions for certain nationalities have also followed a stable trend, continuing to represent a small share (1% and <1% respectively) in total restrictions.

Restrictions Imposed, by type

Important: This analysis does not capture pre-COVID-19 related travel restrictions, rather it draws attention to various travel restrictions issued as a result of COVID-19. This report focuses on the changes to pre-existing measures affecting passengers travelling through specific routes or with specific travel documentation and nationalities. The number of restrictions recorded in this report is indicative of the total number of COVID-19 related travel restrictions since 8th March 2020, when IOM began monitoring the impact of travel restrictions on global mobility as a result of COVID-19. More specifically, this analysis highlights emerging changes as a result of COVID-19 travel requirements to support identifying border management practices. This analysis does not aim to provide information on exact travel requirements. For specific and updated travel information, kindly refer to respective Consular authorities of the destination country. International Air Transport Association (IATA) and relevant airline companies may be a valid alternative to explore.

Changes in Restrictions on Arrival since 10th March 2020

(1*) Restricted entry on passengers coming from other countries, territories and areas (C/T/A).

(2*) C/T/As imposing medical measures, changes in Visa or ID or other measures on arrival.

The opinions expressed in this document do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the document do not imply the expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries.
