

### Key DTM figures in the sites (MSLA Round 15)<sup>1</sup>

**73 resettlement sites**

**19,575 IDP households**

16,953 by Cyclone Idai  
2,622 by floods

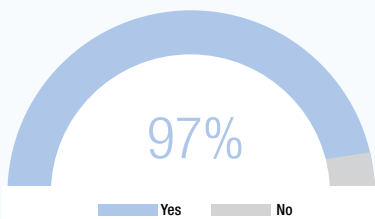

**93,804 IDPs**

81,734 by Cyclone Idai  
12,070 by floods

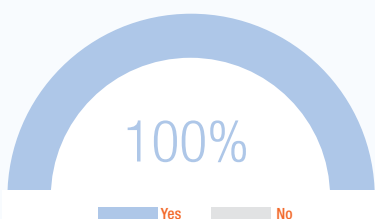

**6 migrant workers  
have returned from  
South Africa and  
joined their families in  
the resettlement sites**

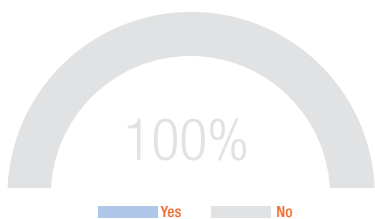

### Actions on COVID-19 prevention and control taken in almost all sites

Reportedly, people living  
in all the sites have been  
informed of COVID-19  
precaution measures

Did any family or individuals  
depart the site because of  
COVID-19?

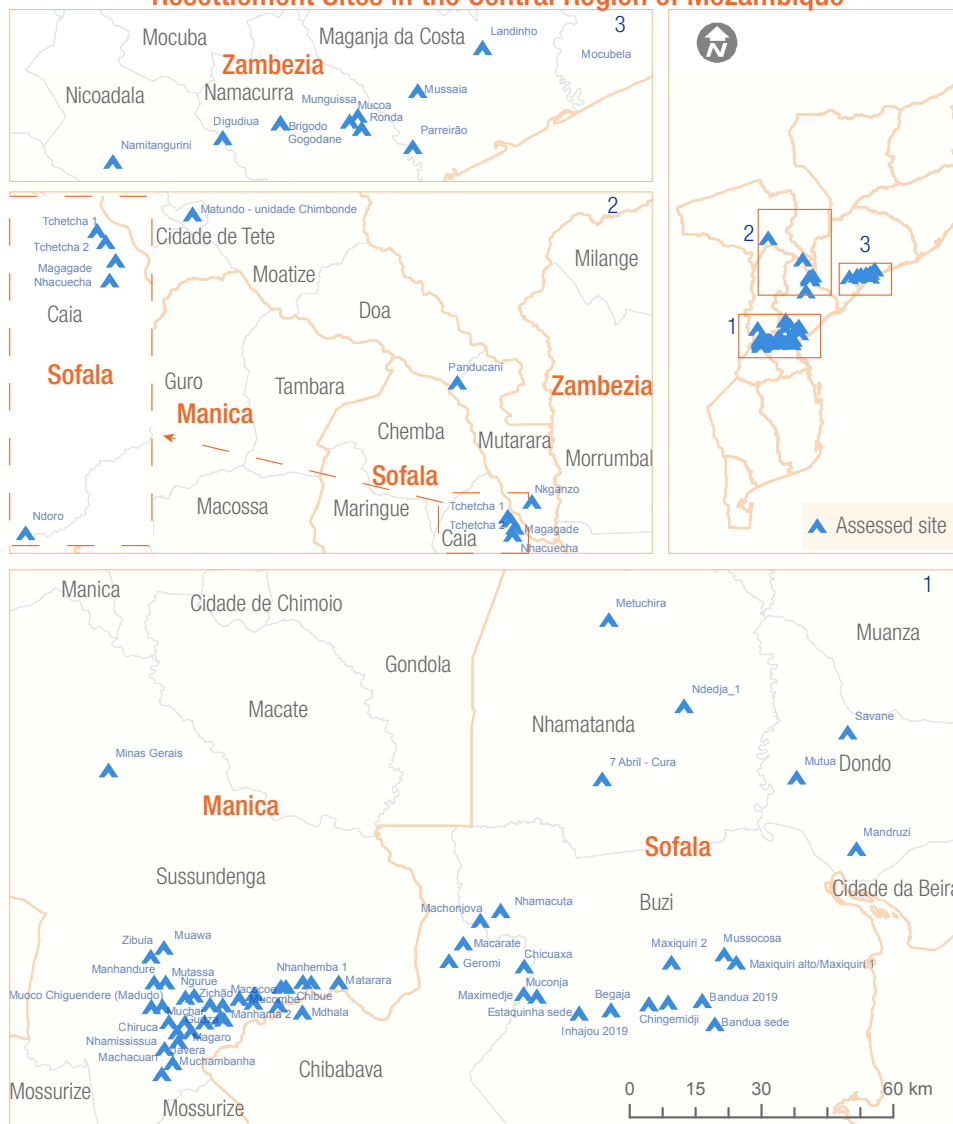

The current outbreak of COVID-19 has resulted in a global pandemic, heightening the risk to vulnerable populations, internally displaced people and people on the move. On 22 March 2020, the Government of Mozambique officially declared the first positive COVID-19 case. In late March, South Africa declared a lock-down due to the spread of COVID-19, which prompted over 14,000 Mozambican migrants to return home from South Africa, through the Ressano Garcia border, within a span of a few days<sup>2</sup>. This further heightened the risks and concerns over the spread of the virus in Mozambique, in particular for vulnerable populations such as Internally Displaced Persons (IDPs).

In response to the COVID-19 pandemic, IOM's Displacement Tracking Matrix (DTM) in collaboration with the Government of Mozambique's National Disaster Management Agency (INGC) conducted an assessment in the resettlement sites from 8 to 11 September 2020, with the sole purpose to inform government and humanitarian partners on preparedness levels and precautionary measures currently available in resettlement sites hosting populations displaced by Cyclone Idai. The information gathered is intended to help partners plan interventions. This information will further allow partners to identify recommended health and site preparation measures to prevent and contain an outbreak in the resettlement sites in the central region.

In the past month, among the 73 resettlement sites assessed, three sites (Maximedje, Mdhala and Muconja all in Sofala province) reported the arrival of six Mozambican migrant workers returning from South Africa. All sites reported a noticeable change in people's behaviours and habits to better prevent COVID-19.

### Resettlement Sites in the Central Region of Mozambique

The depiction and use of boundaries, geographic names, and related data shown on maps and included in this report are not warranted to be error free nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by IOM.

## Preparedness measures and facilities

In 97 per cent of the assessed sites key informants reported that sites were taking actions to prevent the spread of COVID-19 within the site. The two sites reporting that no action was taken for the prevention and control of COVID-19 are situated in Nhamatanda district in Sofala province (Metuchira and Ndedja 1).

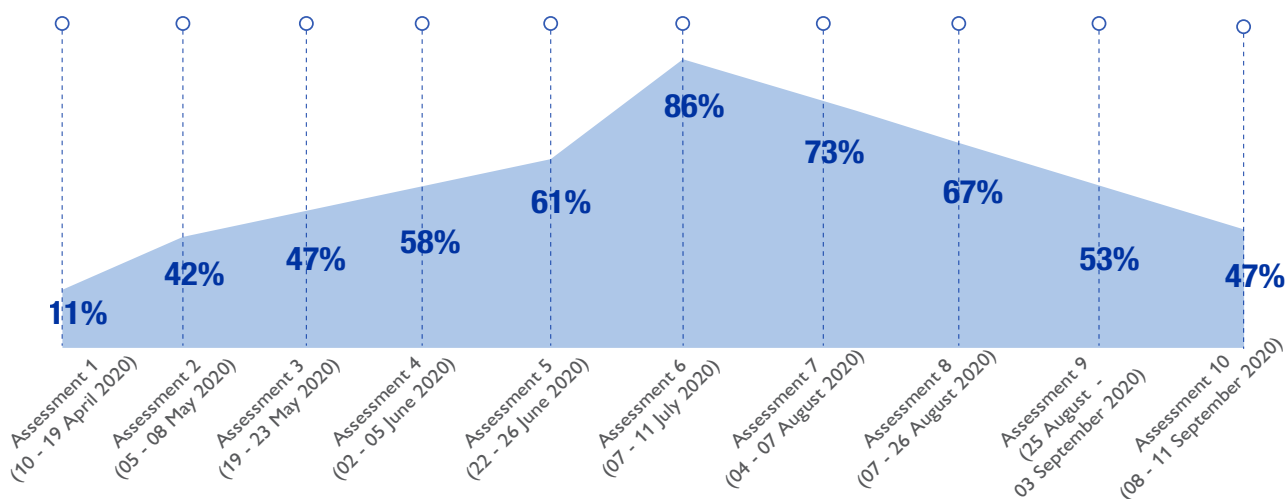

Forty-seven per cent of the assessed sites reported that new hand-washing stations have been built in the past month. Since the peak in construction of new hand-washing stations in July 2020, there has been a continued decrease in the number of newly built hand-washing stations. This trend could possibly signal that sites now have sufficient hand-washing facilities.

Compared to the previous assessment, a slightly higher number of sites reported the availability of COVID-19 protective equipment, such as masks or gloves, in the resettlement site. Specifically, during this assessment, 65 out of 73 assessed sites (89% compared to 84% in the previous assessment) reported the availability of COVID-19 protective equipment, the highest number to date, as illustrated in the graph below. Half of the sites without available COVID-19 protective equipment (4 out of 8) are situated in Sofala province, while the remaining ones are located in Tete (3 sites) and Manica (1 site). It is also noteworthy that all three resettlement sites assessed in Tete province reported the lack of COVID-19 protective equipment. Local government, INGC, IOM and Red Cross have been mentioned as the main actors providing COVID-19 protective equipment to the resettlement sites.

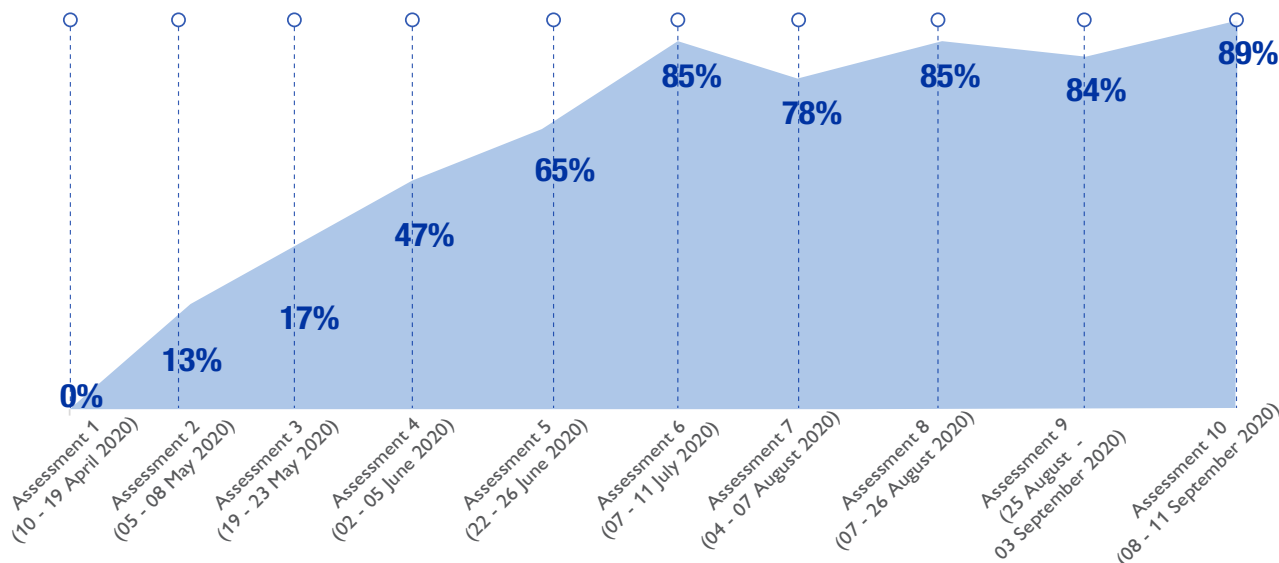

Finally, it is noticeable that none of the sites have an available isolation space in the event of a suspected COVID-19 case.

### In the past month, have any new hand-washing stations with soap and water been built?

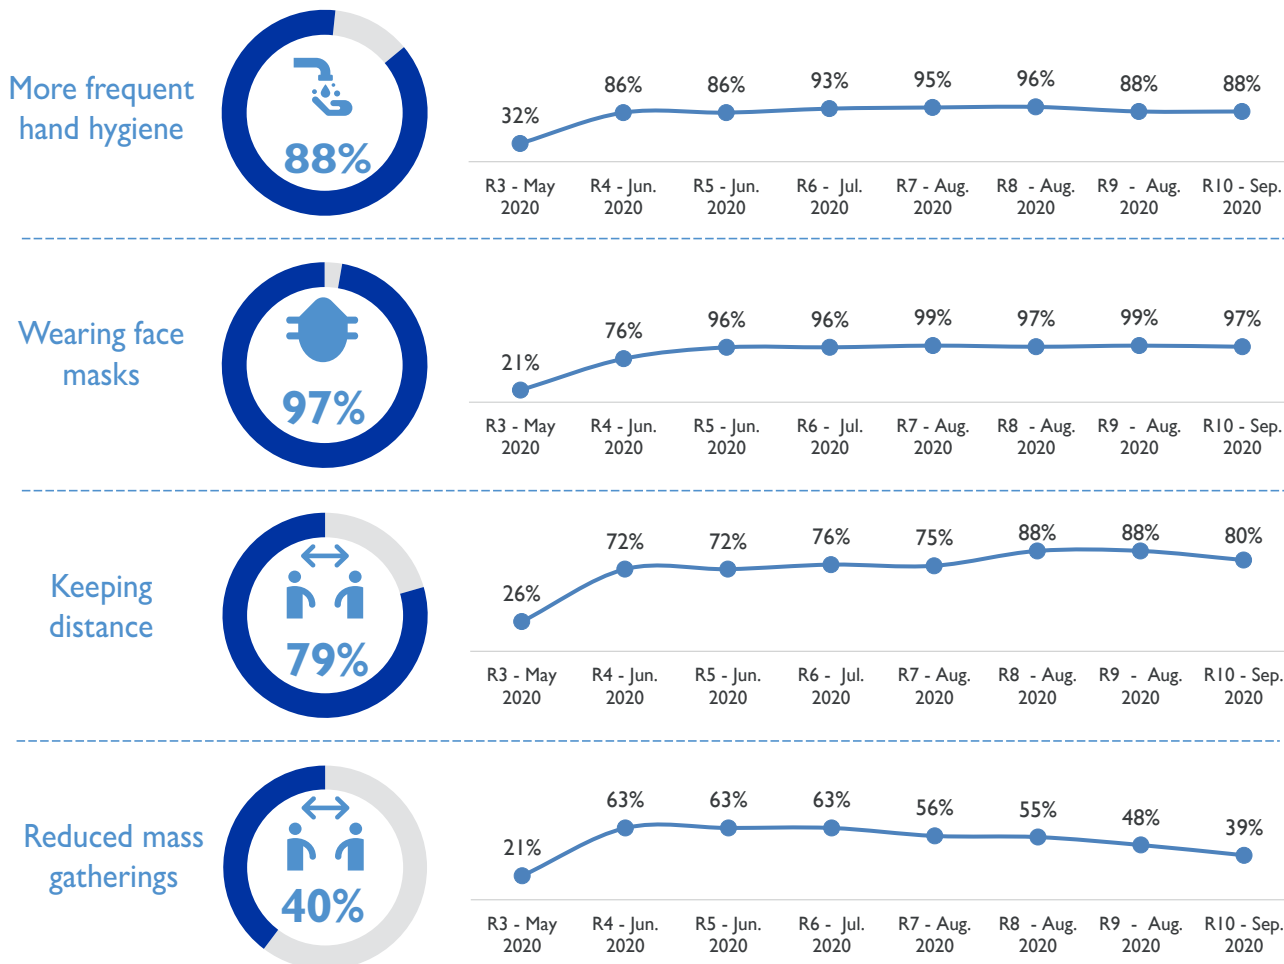

### Is there any COVID-19 protective equipment available in the site (masks, gloves, etc.)?

### Observed changes in people’s behaviours and habits

All the focal points reported that they have noticed changes in people’s behaviours and habits to prevent the spread of COVID-19. Specifically, interviewed key informants reported the following changes: site residents wearing face masks (97% of sites, the sole exceptions being Panducani site in Tete province and Namitangurini site in Zambezia province), more frequent hand hygiene (88%), keeping distance in queues, at water points and other gatherings (79%), and reduced mass gatherings (40%).

### Reported noticeable changes in people’s behaviours and habits to prevent the spread of COVID-19

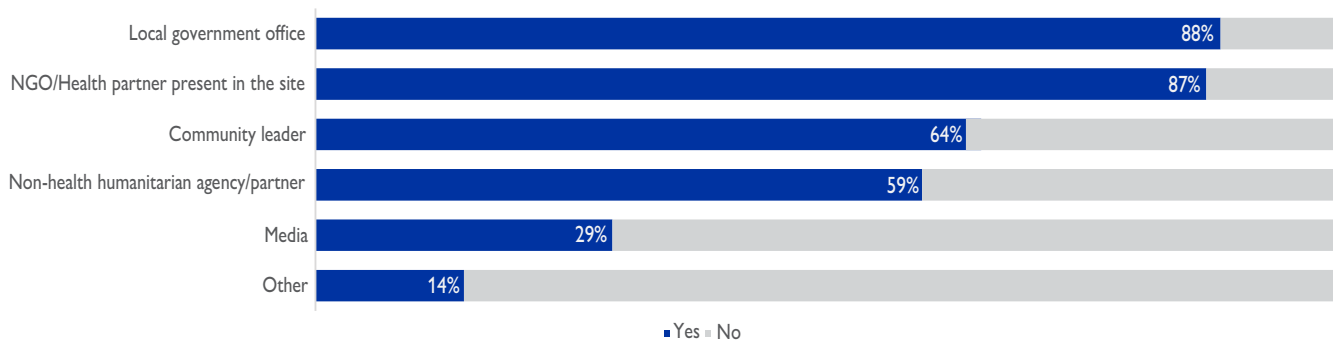

### Awareness raising

Reportedly, people living in all the sites have been informed about COVID-19 preventive measures. Moreover, in all sites awareness sessions have been held to inform the IDPs residing in the site about COVID-19 preventive measures.

As indicated in the graph below, the main actors involved in informing the resettlement site population about COVID-19 preventive measures have been the local government office (in 64 assessed sites, 88%), NGOs and health partners working at the site (63 sites, 87%), community leaders (47 sites, 64%), non-health humanitarian agencies and partners (43 sites, 59%), the media (21 sites, 29%) and other actors (10 sites, 14%).

#### Awareness Sessions Actors

## Annex 1: Preparedness Matrix for Resettlement Sites in Central Mozambique

Province	District	Site name	Were there any actions for COVID-19 prevention and control taken in the site?	Were people living in the site informed of the COVID-19 precaution measures?	Were there any awareness sessions held in the site to inform people of the COVID-19 precaution measures?	In the past month, any new hand washing station with soap and water was built?	Any of the COVID-19 protective equipment available in the site (masks, gloves, etc.)?	Is there isolation space available in the site?	Have you noticed any change in people's behaviours and habits to better prevent COVID-19 in this site?
