AKRE 36

#### **DISPLACEMENT TIMELINE FROM 17 OCTOBER: WEEKLY UPDATES**

Following a close collaboration with local authorities initiated in early February 2017, DTM established a joint information collection system to gather consistent data at the neighborhood level, on IDPs displaced within the city of Mosul. The estimate of 380,000 IDPs (over 63,000 families) displaced to east Mosul due to the west Mosul operations is attributed to the integration of the new findings, not to a specific event.

All information collected on IDPs and returnees is included in the Emergency Tracking (ET) database once the locations of displacement or return have been identified and validated. The identification of the locations of displacement of the new arrivals requires some time, especially in out-of-camp locations. As some areas are not easily accessible, time is required between an actual population movement and its tracking and reporting.
