

BASELINE MOBILITY ASSESSMENT

**PAKTIKA
SUMMARY RESULTS
ROUND 10 • JAN – JUN 2020**

Shelter needs are high in Paktika, where 523 IDPs and returnees live in tents or open air. Like these families living in destroyed houses, many houses in Paktika are damaged by both conflict and natural disasters. © IOM 2020

ABOUT DTM

The Displacement Tracking Matrix (DTM) is a system that tracks and monitors displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route. For more information about DTM in Afghanistan, please visit www.displacement.iom.int/afghanistan.

In Afghanistan, DTM employs the Baseline Mobility Assessment tool, designed to track mobility, determine the population sizes and locations of forcibly displaced people, reasons for displacement, places of origin, displacement locations and times of displacement, including basic demographics, as well as vulnerabilities and priority needs. Data is collected at the settlement level, through key informant interviews, focus group discussions, and direct observations.

DTM enables IOM and its partners to deliver evidence-based, better targeted, mobility-sensitive and sustainable humanitarian assistance, reintegration, community stabilization and development programming.

5 TARGET POPULATIONS

Through the Baseline Mobility Assessments, DTM tracks the locations, population sizes, and cross-sectoral needs of five core target population categories:

- 1. Returnees from Abroad**
Afghans who had fled abroad for at least 6 months and have now returned to Afghanistan
 - 2. Out-Migrants**
Afghans who moved or fled abroad
- Internally Displaced Persons (IDPs), subdivided into the following three categories:
- 3. Fled IDPs**
Afghans from an assessed village who fled as IDPs to reside elsewhere in Afghanistan
 - 4. Arrival IDPs**
IDPs from other locations currently residing in an assessed village
 - 5. Returned IDPs**
Afghans from an assessed village who had fled as IDPs in the past and have now returned home

Data on population sizes for the 5 target population categories is collected by time of displacement, using each of the following time frames: 2012-2015 • 2016 • 2017 • 2018. • 2019 • 2020

HIGHLIGHTS

-  **19** districts assessed
-  **279** settlements assessed
-  **943** key informants interviewed
-  **52,850** returnees from abroad [2012-2020]
-  **49,919** IDPs [2012–2020] currently in host communities
-  **24,987** former IDPs have returned to their homes [2012–2020]
-  **38,585** out-migrants fled abroad [2012–2020]
-  **648** out-migrants fled to Europe (2%)
-  **523** returnees and IDPs live in tents or in the open air
-  **1 in 2** 46% of all returnees and IDPs reside in only 4 districts: Sharan, Mata Khan, Sar Rawzah and Urgun
-  **1 in 4** persons in Mata Khan, Turwo and Sar Rawzah are either IDPs or returnees
-  **1 in 3** 35% of all IDPs reside in only 2 districts: Urgun and Barmal
-  **1 in 4** 27% of all IDPs reside in only 2 districts: Urgun and Sar Rawzah districts
-  **1 in 6** persons (16%) in Mata Khan and Sar Rawzah districts are returnees

METHODOLOGY

The overall objective of DTM's Baseline Mobility Assessment in Afghanistan is to track mobility and displacement, provide population estimates, locations and geographic distribution of displaced, return and migrant populations, as well as refugees, nomads, cross-border tribal groups, and both domestic and international labour migrants. DTM captures additional mobility information, including reasons for displacement and return, places of origin and destination, times of displacement and return, secondary displacements, and population demographics, vulnerabilities and multi-sectoral needs.

DTM predominantly employs enumerators who originate from the areas of assessment. Enumerators collect quantitative data at the settlement level, through focus group discussions with key informants (KIs). Through direct observations, enumerators also collect qualitative data on living conditions, basic services, and security and socio-economic situation.

Due to security risks, enumerators cannot carry smart-phones or tablets in the field, therefore they collect data, daily, using a paper-based form, which is pre-filled with data from the previous round for verification of existing data and to expedite the assessment process. Completed forms are submitted weekly to the provincial DTM office and verified for accuracy by the team leader and data entry clerk. Once verified, the data is entered electronically via mobile devices, using KoBo forms, and submitted directly into DTM's central SQL server in Kabul, where it is systematically cleaned and verified daily, through automated and manual systems. This stringent review process ensures that DTM data is of the highest quality, accuracy and integrity.

When DTM assesses a province for the first time, enumerators collect data through two rounds of two-layered assessments:

1. District-level assessment (B1): this assessment aims to identify settlements with high inflows and outflows of Afghan nationals and provide estimated numbers of each target population category.
2. Settlement-level assessment (B2): based on the results of B1, this assessment collects information on inflows and outflows of each target population category at each settlement (village), identified through B1. Additional villages are also identified and assessed, based on referrals from KIs.

Since DTM has now assessed all 34 provinces, only settlement-level assessments will be conducted in the future. Pending continued funding, DTM aims to conduct baseline mobility assessments, nationwide, twice per year.

DTM enumerators contribute to the COVID-19 response by disseminating COVID-19 RCCE information/materials in communities during assessments, like this enumerator in Paktika. © IOM 2020

KEY INFORMANTS

DTM's field enumerators collect data at the settlement level, predominantly through focus group discussions with key informants. While assessing communities, enumerators also observe the living conditions and availability of multi-sectoral services. In the rare case that DTM's District Focal Points cannot physically reach a community, due to insecurity, conflict, or risk of retaliation, DFPs meet the focus groups at safe locations outside their communities or conduct the assessments by phone.

By actively recruiting more female enumerators, though challenging, DTM has made significant strides to improve gender inclusion in focus group discussions, although there is much room for improvement.

RETURNNEES

Returnees are Afghan nationals who have returned to Afghanistan in the assessed location after having spent at least six months abroad. This group includes both documented returnees (Afghans who were registered refugees in host countries and then requested voluntary return with UNHCR and relevant national authorities) and undocumented returnees (Afghans who did not request voluntary return with UNHCR, but rather returned spontaneously from host countries, irrespective of whether or not they were registered refugees with UNHCR and relevant national authorities).

Grand Total	52,850	49,919	102,769

Overall, Paktika province hosts a total inflow of 102,769 returnees and IDPs, of which 51% (52,850) are returnees and 49% (49,919) are IDPs. The table below shows the 40 settlements in Paktika that are most affected by this influx. These 40 settlements (14% of the 279 settlements assessed in Paktika) host 47% of the province’s returnees and IDPs. These communities are especially fragile and susceptible to social instability induced by this large influx and the subsequent competition for limited, already overstretched resources and job opportunities.
