

The DTM Emergency Event Tracking (EET) is deployed to track sudden displacement and population movements, provide more frequent updates on the scale of displacement, and quantify the affected population when needed. As a subcomponent of the new Mobility Tracking methodology in Sudan ([Round One](#)), and activated on a need basis, EET utilises a broad network of key informants to capture best estimates of the affected population presence per location – a useful tool for humanitarian response planning and design.

Event Overview

DTM teams activated EET to monitor the displacement of individuals affected by heavy rainfall and flooding in Nyala, South Darfur on 24 July 2021. The first EET update estimates that a total number of 9,750 individuals (1,650 households) have been displaced and are currently seeking shelter in Otash IDP camp in Nyala, South Darfur. The IDP caseload was displaced from Mukjar (30%) in Central Darfur, Beliel (20%) and Mirshing (50%) in South Darfur.

Field teams indicate that there has been one reported death and no reported injuries, with 450 individuals reporting lost goods, cattle, and/or livestock. All displaced individuals are Sudanese nationals. DTM teams identified at least 447 cases of additional vulnerabilities in need of assistance and support. Based on a ranking scale, the three priority needs across the caseload are Non-Food items, Emergency Shelter, and WASH (water, sanitation and hygiene).
