

OVERVIEW

In August 2021, a total of **23,724** movements were observed across five of Ethiopia's flow monitoring points (FMPs). It should be noted that data collection at Humera Flow Monitoring Point in Tigray region did not take place due to security and access constraints, thus affecting the total number of movements for the month. This represents a **7.6% increase** in daily average movement in comparison with July 2021 when an average of 711 movements per day were observed.

Following the steady increase in movements this month, outgoing movements during August have continued to be higher than ever (85.0%) than incoming movements (15.0%). The percentage of outgoing versus incoming movements has continued to climb even above the proportions observed prior to the outbreak of COVID-19 in Ethiopia. A total of **20,169** outgoing movements were observed of which 9,105 (45.4%) were heading towards the Kingdom of Saudi Arabia, 3,025 (15%) were going to Kenya, 2,428 (12%) were travelling towards Djibouti, 1,165 (5.8%) to South Africa, 893 (4.2%) intended to reach the United Arab Emirates, and 493 (2.4%) headed to Qatar.

At the same time 3,555 incoming movements were observed, of which 1,219 (34.3%) had originated from Djibouti, while 1,099 (30.9%) came from Kenya, 684 (19.2%) from Sudan, 314 (8.8%) movements from Somalia, and 202 (5.7%) from Yemen. Almost all of these were Ethiopian nationals who were likely returning home. The number of incoming movements from Sudan into Ethiopia has continued to decline by more than 60.0% (from 2,429 to 684) for the second month after a steady increase since the outbreak of the Northern Ethiopia Crisis between November 2020 and June 2021.
