The Rainy Season in Sudan typically occurs on an annual basis with greatest concentration between the months of June and September. In 2021, all flooding EETs were implemented between the month of July and September. In 2022, DTM Sudan first implemented its EET to monitor flooding taking place in At Tadamon locality, South Kordofan in May. The need for the implementation of a flooding EET this early in the year reflects the fluctuating raining patterns across Sudan, particularly across the water basins of the two Nile rivers, as well as climate change acceleration around the world.

The information provided reflects published data collected by DTM Sudan's Emergency Event Tracking tool up to 29 September 2022. Data collection exercises covering the Rainy Season remain ongoing with the rates of displacement data expected to decrease gradually as the rainy season is beyond its peak. Many localities still remain inaccessible to the humanitarian community due to the extreme weather patterns.

Early Warning Flash Alerts

HIGHLIGHTS¹

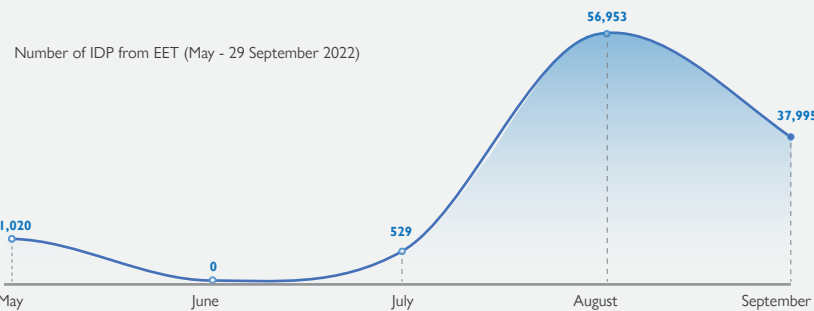

19 EET Reports

96,457 New IDP Individuals

17,402 New IDP Households

IDPs per state

State	Percentage	Number of Individuals
Gedaref	36%	34,357
N.Darfur	17%	16,232
S.Darfur	13%	12,343
River Nile	11%	10,245
Al Jazirah	9%	8,715
Kassala	5%	5,242
W.Kordofan	4%	3,904
W.Darfur	2%	2,170
C.Darfur	2%	1,700
S.Kordofan	1%	1,549

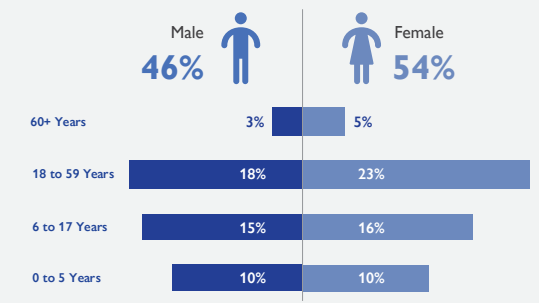

Affected population and house damage²

348,724 Affected people

48,250 House Damaged

24,859 House Destroyed

Demographic

¹ Data on displacement only reflects the accumulative figures captured from the published Emergency event tracking (EET) reports on floods from May until 29 September 2022.

² The caseload of flood-affected population is estimated at 348,724 individuals – according to UNOCHA, the Humanitarian Aid Commission, and local authorities on the ground. For further information please refer to [Sudan Floods: people and areas affected dashboard](#).
