

WEEKLY FLOODS UPDATE

DIM

(May - 20 October 2022)

This map is for illustration purposes only. Names and boundaries on this map do not imply official endorsement or acceptance by IOM

HIGHLIGHTS¹

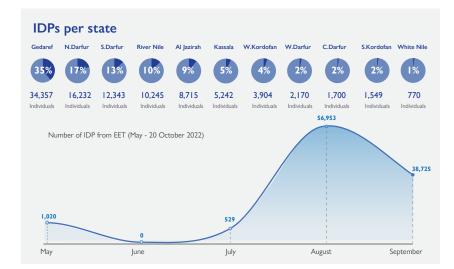

97,227 Newly Displaced

17,512 Newly Displaced

Affected population and houses damaged 2

48,250 Houses Damaged

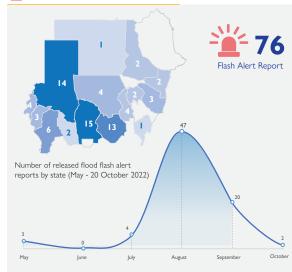

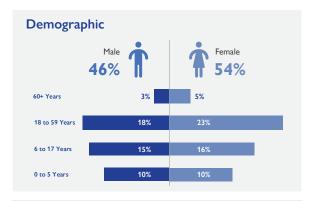

24,859
Houses Destroyed

The Rainy Season in Sudan typically occurs on an annual basis with greatest concentration between the months of June and September. In 2021, all flooding EETs were implemented between the month of July and October. In 2022, DTM Sudan first implemented its EET to monitor flooding taking place in At Tadamon locality, South Kordofan in May. The need for the implementation of a flooding EET this early in the year reflects the fluctuating raining patterns across Sudan, particularly across the water basins of the two Nile rivers, as well as climate change acceleration around the world.

The information provided reflects published data collected by DTM Sudan's Emergency Event Tracking (EET) tool up to 20 October 2022. The last flash alert released as a result of the Rainy Season reported on flooding in Kadugli Town in Kadugli locality, South Kordofan on 8 and 9 October 2021. As the rainy season reaches its end, field teams have not released any EET reports following individuals displaced due to flooding during October 2022. Given that the IDP caseload has remained constant, this will be DTM Sudan's final weekly floods summary this year. DTM field teams will continue to monitor displaced caseload across Sudan and update the humanitarian community should the need arise. DTM Sudan is currently preparing a Rainy Season overview, which will review displacement and return during the 2022 Rainy Season — to be published shortly.

Early Warning Flash Alerts

Data on displacement only reflects the accumulative figures captured from the published Emergency event tracking (EET) reports on floods from May until 20 October 2022.

²The caseload of flood-affected population is estimated at 348,724 individuals – according to UNOCHA, the Humanitarian Aid Commission, and local authorities on the ground. for further information please refer to Sudan Floods: people and areas affected dashboard.
