IOM Yemen DTM's Rapid Displacement Tracking (RDT) tool collects data on estimated numbers of households forced to flee on a daily basis from their locations of habitual residence or displacement, allowing for regular reporting of new displacements¹ in terms of estimated numbers, causes of displacement, geography and needs. It also tracks returnees who returned to their location of habitual residence.

Between 4 and 10 December 2022, IOM Yemen DTM tracked 123 households (738 individuals)² who experienced displacement at least once.

Safety and security concerns as a result of the conflict were the main reason for displacement, accounting for 80 per cent (99 HHs) of the total and followed by economic reasons related to conflict, accounting for 20 per cent (24 HHs).

From 1 January to 10 December 2022, IOM Yemen DTM tracked 9,849 households (HH)³ (59,094 Individuals) who experienced displacement at least once.

Since the beginning of the year, the number of tracked new instances of displacement has been declining in an irregular pattern mainly from mid-August 2022.
