

### OVERVIEW

During the month of November 2022, a total of 48,755 movements were recorded and 3,245 migrants were interviewed across 33 Flow Monitoring Points (FMPs) in Zimbabwe. The total movements recorded increased by 8% compared to the previous month. 61% of movements observed were inflows, whilst 39% were outflows. The top three sending districts were Beitbridge (43%), Harare (13%), and Masvingo (6%).

The South Africa-Zimbabwe corridor recorded the highest movement of 38,422 (79%) followed by the Zambia-Zimbabwe corridor which recorded 6,144 (13%) movements. Thirty-four per cent of movements along the South Africa-Zimbabwe corridor were short-term local movements. These are characterised by movements of less than 6 months of people travelling to conduct commercial activities, travelling to access services and daily regular commuting. Twenty-six per cent of movements along the South Africa-Zimbabwe corridor were family reunifications, and 24% were long-term economic movements. The Zambia-Zimbabwe corridor consisted of 72% short-term movements, and 16% long-term economic movements. Forty-four per cent of movements along the Botswana-Zimbabwe corridor were long-term economic movements. Sixty per cent of long-term economic movements were outflows while fifty-six of short-term local movements were inflows. The reporting period has generally been characterised by an increase in movements as a result of the approaching holiday seasons. Movements are predominantly for family reunification and travellers conducting commercial activities in anticipation for the December holiday season.

### HIGHLIGHTS

**230** of interviewed migrants were ZEP holders.

**15%** of incoming migrants were going to **Matabeleland South**

**47%** of outgoing migrants had departed **Matabeleland South**

**31%** of movements were for family reunification and **29%** were travelling to conduct commercial activities.

**38%** received the 3<sup>rd</sup> COVID-19 shot (booster)

**899** Pregnant Women

**837** Unaccompanied Children

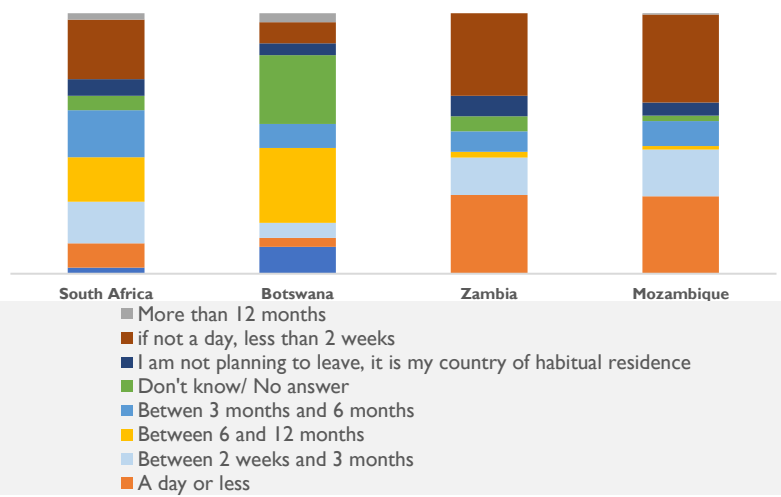

**111** Persons with a disability

### INTENDED DESTINATION COUNTRIES

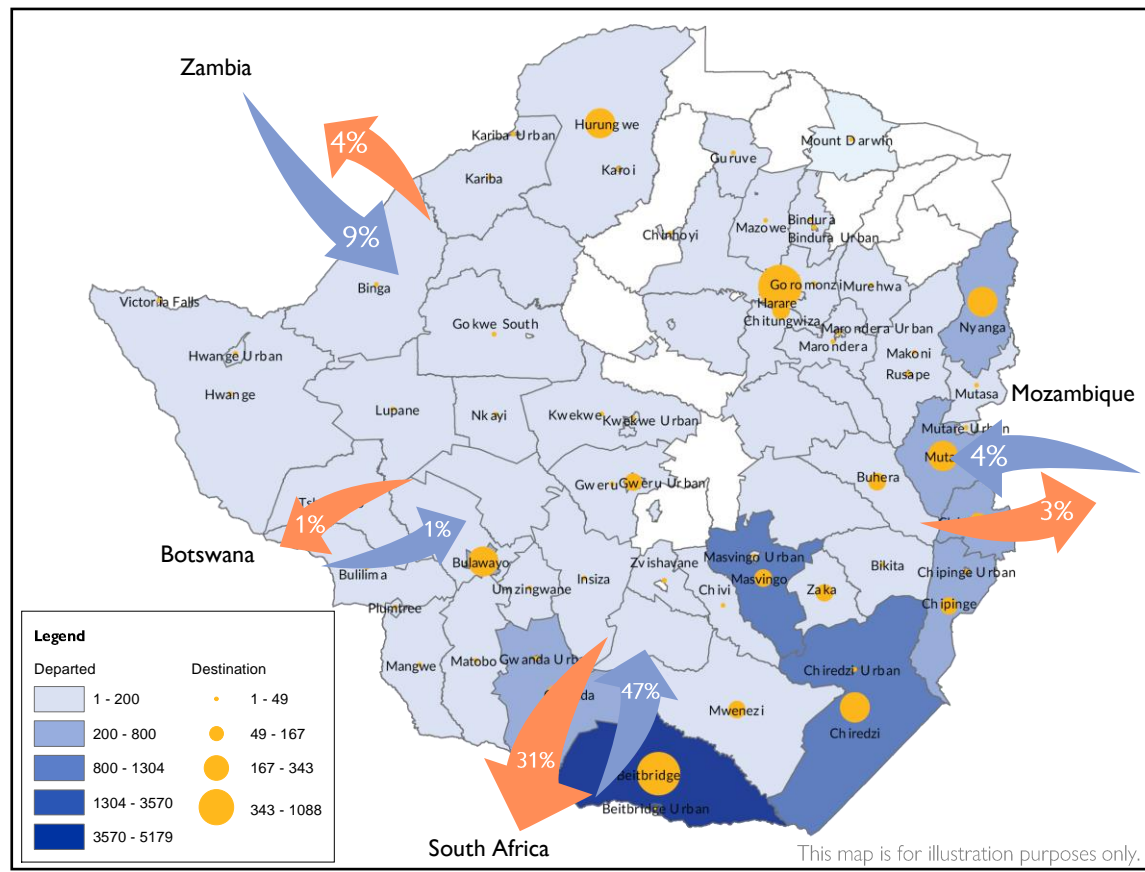

Sixty-six per cent of migrants indicated that South Africa was their final intended destination. Of the migrants going to South Africa, 41% indicated they had chosen the destination as they were returning to their existing employment, 23% were travelling to join their family and relatives, and 16% chose the destination due to its appealing socio-economic conditions. Twenty-three per cent of the respondents mentioned travelling to South Africa for a period of 2 weeks or less, while 18% planned to stay for a period of between 3-12 months. Forty-five per cent of migrants travelling to Mozambique were travelling to conduct commercial activities. Respondents mentioned the affordable prices in the country as a reason for their choice of destination.

### INTENDED PERIOD OF STAY BY DESTINATION

### MIGRANTS DEPARTED AND INTENDED DESTINATION DISTRICTS

**Legend**

Departed	Destination
1 - 200	1 - 49
200 - 800	49 - 167
800 - 1304	167 - 343
1304 - 3570	343 - 1088
3570 - 5179	

Beitbridge (49%), Harare (15%), Masvingo (7%), and Chiredzi (6%), districts were the highest migrant-sending districts. Beitbridge (17%), Nyanga (14%), and Chipinge (9%) districts were the highest migrant-receiving districts during the reporting period. Fifty-seven of migrants travelling to South Africa mentioned Gauteng as their final destination province. Seventy-five per cent of travellers to Zambia were headed to Lusaka and 90% of those travelling to Mozambique were headed to Manica. Twenty-nine per cent of migrants travelling to Botswana were planning to stay for a period of six months or more, and the majority (43%) were returning to their existing place of employment. Forty-nine per cent of migrants travelling to Zambia were travelling for a day with 31% indicating that they chose Zambia due to its geographic proximity.

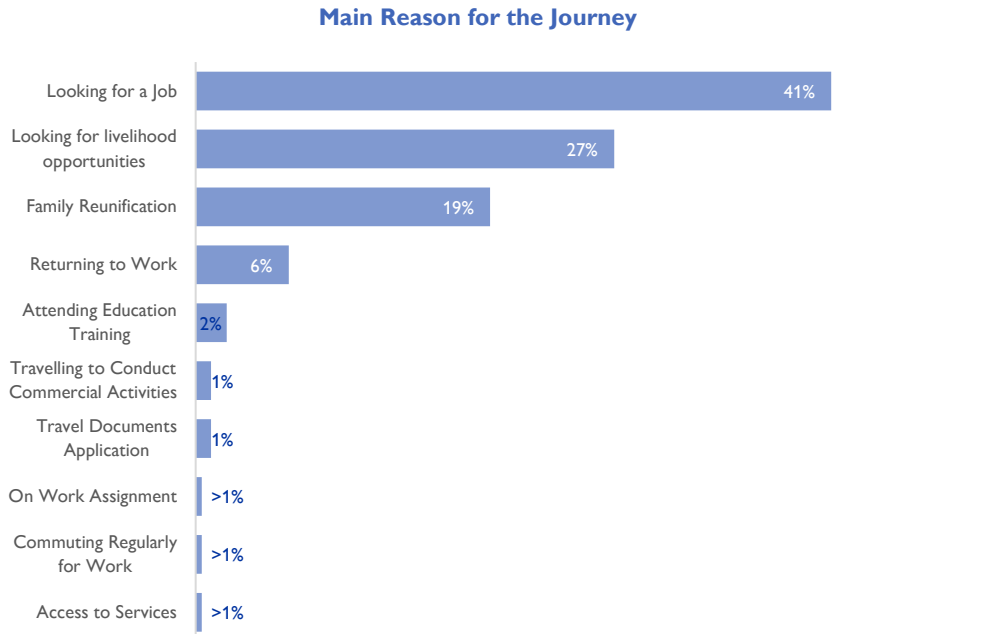

230

migrants interviewed were in possession of Zimbabwe Exemption Permit (ZEP) and were bringing some of their properties back home.

**57%**  
Males

**43%**  
Females

During the reporting period, 230 migrants indicated to be in possession of the Zimbabwe Exemption Permit (ZEP). 168 of the respondents cited South Africa as their place of usual residence, with 57 per cent reporting Gauteng province as their place of stay. Of the 168 respondents who cited South Africa as their place of usual residence, 90% indicated being employed in the host country. The top three employment sectors were the engineering, mining and construction sectors (19%), agriculture and forestry (15%), and mining (9%).

Of the migrants whose place of usual residence in South Africa was Gauteng, 50% indicated that their highest level of education was at tertiary level (Bachelor, Masters or Doctorate degree). Thirteen per cent were employed in engineering and manufacturing and in health and social work services. Sixty-eight per cent of migrants residing in the Western Cape had completed their tertiary education and 32% were predominantly employed in the hospitality industry. Migrants residing in Limpopo were mostly employed in the agricultural sector (32%) and their highest level of completed education was at the secondary level (82%).

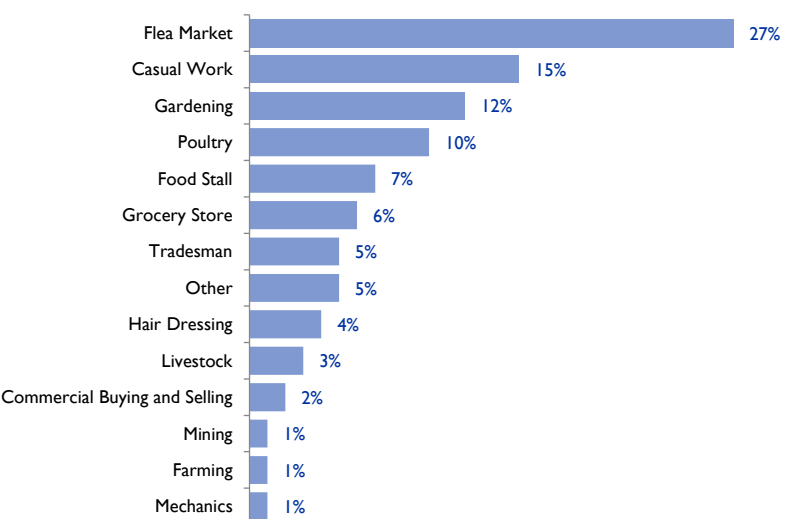

Most of the ZEP holders travelling to South Africa planned to stay for 12 months or more whilst others indicated that they had no intention to leave South Africa. Those travelling to Zimbabwe for a period of 2 weeks or more, were travelling for family reunifications.

### SOURCES OF INCOME\*

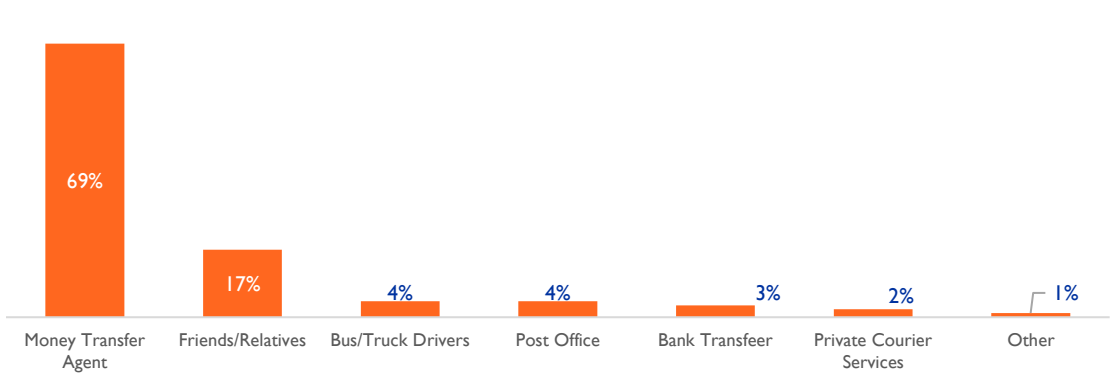

42 per cent of migrants reported that their source of income was from income-generating activities. 40% were receiving a salary from their place of employment. Of the migrants who reported undertaking income-generating activities, 27% were operating a flea market, and the majority (31%) were based in Manicaland. 5% of tradesmen included carpenters, bricklayers, moulders, weavers, and welders.

### TYPE OF INCOME-GENERATING ACTIVITY

### HOW DO YOU SEND/RECEIVE REMITTANCES AND HOW OFTEN?

Sixty-seven per cent of female migrants mentioned that their source of income was through remittances. The majority (69%) of migrants received their remittances through money transfer agents, while 17% received or sent their remittances through friends and family. Eighty-one per cent of migrants indicated that they sent money or received money on a monthly basis. Most of the remittances received went towards household needs.

### WHAT ARE REMITTANCES USED FOR

**58%** of migrants sent/received between \$100-\$500 in remittances

\* Please note that multiple answers were possible for this question.

### MAIN REASONS FOR THE JOURNEY BY INTENDED DESTINATION

South Africa remains the most popular destination for migrants who are seeking employment, livelihood opportunities, commercial activities and seasonal migration. 70% of migrants travelling for religious and cultural reasons were travelling to Mozambique. While those travelling to conduct artisanal mining reported Mozambique as their intended destination.

439 (26%) of travellers mentioned travelling to conduct commercial activities, of which 81% indicated travelling to buy goods. Of the migrants who indicated travelling to purchase goods, 36% were travelling to purchase clothing, with South Africa being the preferred destination. Twenty-seven per cent of migrants indicated that they were travelling to purchase food, and most (52%) were observed travelling to Mozambique. Zambia was a popular destination for those who were travelling to purchase tobacco/cigarettes (40%), building materials (33%) and fuel (36%).

### IF TRAVELLING TO PURCHASE IN THE DESTINATION COUNTRY, WHAT ARE YOU PURCHASING?

### MAIN REASONS FOR JOURNEY: ACCESS TO HEALTH

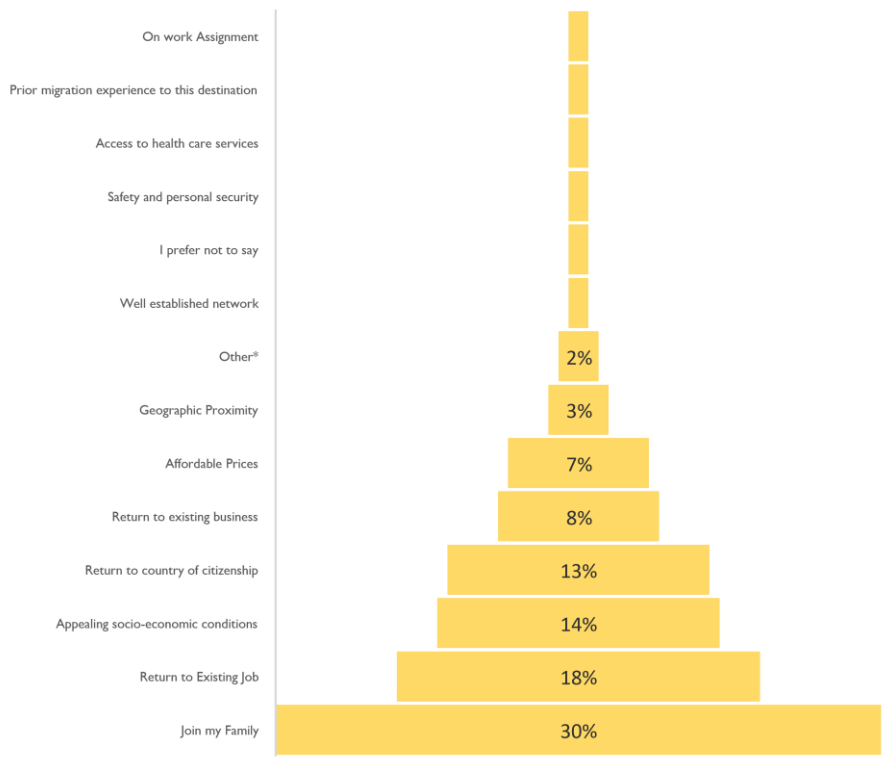

Of the migrants who reported travelling to access health services, the top three services were general medical care (34%), access to medication (21%) and chronic illness care (18%). Eighty-seven per cent of migrants who travelled to access health care travelled to South Africa for surgery. 50% of migrants who travelled to Mozambique to access health services needed general medical care.

### HEALTH SERVICES ACCESSED IN THE DESTINATION COUNTRY

50 per cent of Zimbabwean nationals who needed health care services travelled predominantly to South Africa. Migrants from Mozambique were observed travelling to Zimbabwe to access health care, the majority were females accessing general medical care and medication. 50% of migrants from Mozambique accessed services in Chipinge district.

### WHY DID YOU CHOOSE THIS FINAL DESTINATION?

Fifty-eight per cent of migrants who had started their journey in South Africa and were travelling to Zimbabwe indicated travelling to join their families. Thirty-one per cent of migrants travelling from Zambia to Zimbabwe indicated that they had chosen the destination due to its proximity and ease of travel. Forty-one per cent of migrants travelling from Zimbabwe to South Africa mentioned returning to an existing job or travelling to start a new job.

### CHALLENGES ENCOUNTERED

180 migrants encountered challenges along their journey. Thirty-seven per cent of those who encountered challenges were travelling between Zimbabwe and Mozambique. Twenty-seven per cent of the migrants reported theft and bribing as a challenge that they encountered. Four per cent of migrants travelling along Zimbabwe and South Africa encountered challenges with their identity documents. 6% of male migrants who had transited between Botswana and Zimbabwe reported having been arrested and detained by authorities.

Challenges	Botswana	Mozambique	South Africa	Zambia
Theft/Bribing/	1	14	10	13
Lack of information	0	0	0	0
Identity document issues	0	14	6	4

Myself or family member contracted Covid-19	1	0	4	0

### VULNERABILITIES

Seventy-six per cent of pregnant female were observed travelling along the South Africa-Zimbabwe corridor. Unaccompanied minors were mainly observed along the South Africa – Zimbabwe corridor.

### DISABILITIES

Of the 125 surveyed migrants who answered 'Yes' to having a disability, 83 consented to disclosing their disability. 35 indicated that they had a visual impairment and 25 mentioned having a physical impairment. Fifty-five per cent of migrants with disabilities indicated that South Africa was their intended destination country.

# FLOW MONITORING REGISTRY REPORT

## ZIMBABWE – SOUTH AFRICA (BEITBRIDGE) | NOVEMBER 2022

### KEY FIGURES

**38,422**  
Movements Observed

**1,621**  
Surveys Conducted

**10**  
Flow Monitoring Points

### OVERVIEW

Over the reporting period, a total of 38,422 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 1,746. This represented a 1 per cent decrease compared to October during which 1,759 individual movements were observed on a daily basis. South Africa (59%) and Zimbabwe (41%) were the main countries of departure whilst Zimbabwe (63%) and South Africa (41%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 38,422 individuals observed, 57 per cent were males and 43 per cent were females. There were 685 women who were visibly pregnant. Boys and girls (males and females below 18) made up 8 per cent of the individuals observed. Meanwhile, 589 children were unaccompanied. Thirty-seven per cent of interviewed migrants were travelling so as to join their family members and 56 per cent of these were travelling to Zimbabwe and 44 per cent to South Africa. Twenty-nine per cent of the surveyed migrants were travelling to South Africa to return to their existing jobs whilst 11 per cent chose South Africa because of appealing socio-economic conditions. Eleven per cent stated that they were travelling to South Africa to buy different items and 56% travelled to buy clothes whilst 22% wanted to buy food.

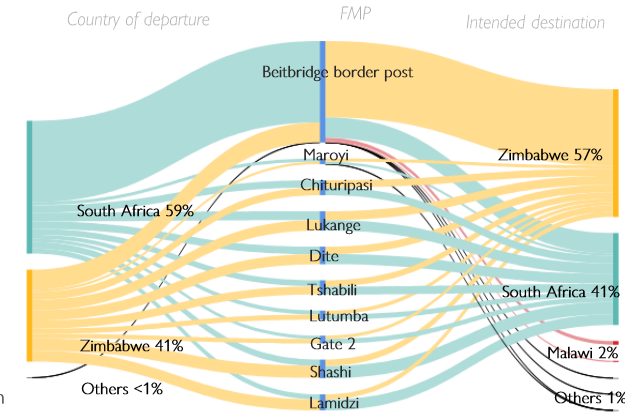

### DEMOGRAPHIC PROFILE

### FLOW DIRECTION

### AREAS OF ORIGIN AND INTENDED DESTINATIONS

### VULNERABLE GROUPS

Of the migrants with chronic diseases 36 per cent suffered from diabetes and 25 per cent suffered from hypertension as well as HIV (25%). 32 per cent of those with disabilities had visual impairment and 25 per cent were suffering from physical impairment.

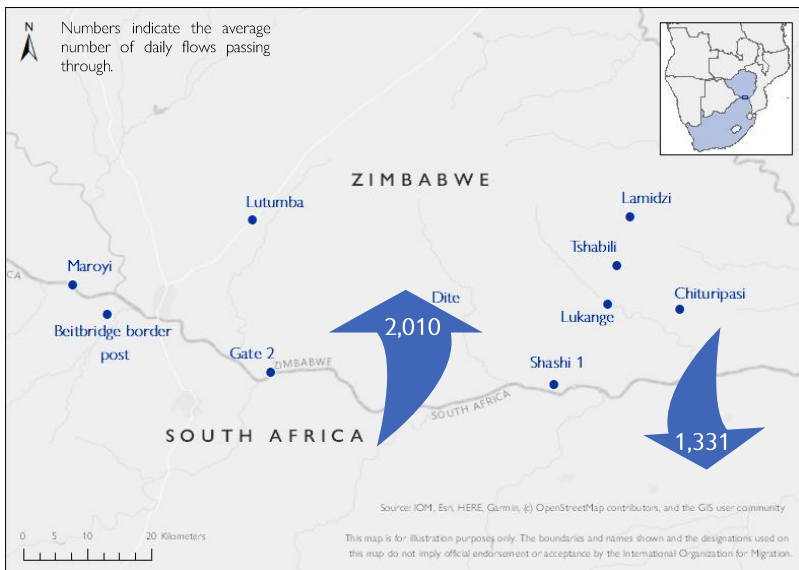

### MODES OF TRANSPORTATION

### REASONS FOR MOVEMENT

Reasons for Movement	Total	Flows to Zimbabwe	Flows to South Africa

# FLOW MONITORING REGISTRY REPORT

## ZIMBABWE (CHIRUNDU) – ZAMBIA | NOVEMBER 2022

### KEY FIGURES

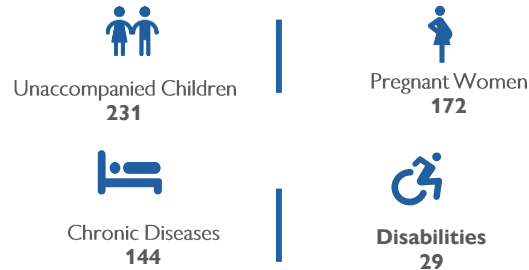

### OVERVIEW

Over the reporting period, a total of 6,144 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 279. This represented a 32 per cent increase compared to October, during which 211 individual movements were observed on a daily basis. Zambia (60%), Zimbabwe (26%) and South Africa (10%) were the main countries of departure while Zimbabwe (66%) and Zambia (32%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 6,144 individuals observed, 36 per cent were males and 64 per cent were females. There were 172 women who were visibly pregnant. Boys and girls (males and females below 18) made up 8 per cent of individuals observed. Of the 231 unaccompanied children observed, 104 were girls and 127 were boys. These minor children were travelling mainly for commercial purposes. However, this information is based on direct observation and self-reporting, therefore is likely under-reported. Of the interviewed migrants coming to Zimbabwe, 24 per cent were returning to their existing business or coming to start new businesses in Zimbabwe whereas 20 per cent were returning to their country of usual residence or citizenship. Twenty-four per cent of the interviewed migrants were going to Zambia to conduct commercial activities thus buying and selling and 14 per cent of these travelling to buy clothes.

### DEMOGRAPHIC PROFILE

### VULNERABLE GROUPS\*

Of the migrants with chronic diseases, 53 per cent suffered from hypertension and 26 per cent suffered from diabetes. Forty-one per cent of the disabled suffered from visual impairments and 14 per cent suffered from physical impairments

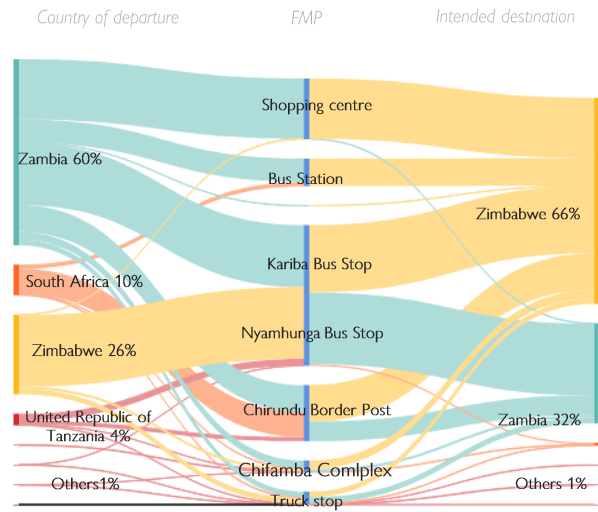

### MODES OF TRANSPORTATION

### FLOW DIRECTION

### CONCLUSION

IOM continues to offer psychosocial support to migrants in need across the 4 corridors. Migrants in need of additional support are referred to the Ministry of Social Welfare and Development and other supporting organisations such as Friendship Bench for further counselling services.

### METHODOLOGY

Flow Monitoring is a data collection activity which seeks to gather key information on mobility and migrant profiles. It begins by identifying zones in which large mobility flows occur and highlighting the characteristics and journeys of travellers in these zones. DTM teams, with the support of local authorities and partners, identify strategic points of transit, where Flow Monitoring Points (FMPs) are set up. At each FMP, DTM conducts two main activities: Flow Monitoring Registry (FMR) and Flow Monitoring Surveys (FMS). The tools collect data at FMPs through direct observation and interviews with key informants, including staff working at transit stations, border patrol officers, local authorities, bus or taxi drivers and travellers themselves.

The FM tools gather data on the number of travellers crossing FMPs, as well as the provenance, next destination, vulnerabilities, challenges, reasons and means of transport of travellers. At each FMP, data is collected by a team of enumerators. Data collection is carried out daily, between 8:00 am and 5:00 pm. Enumerators collect data via a mobile data collection form to ensure data integrity and quality. This report is an overview of the data collected from 1 to 30 November 2022.

### LIMITATIONS

Data collected in the framework of Flow Monitoring activities are the result of direct observations and interviews conducted at FMPs between 8:00 am and 5:00 pm. The data are not representative of all migration flows in the border area, and, because they only reflect the situation of observed or surveyed individuals, cannot be generalized. Temporal coverage of the data collection exercises is also limited to a specific time window. While data is collected daily, Flow Monitoring activities do not capture all flows transiting through FMPs. Data on vulnerability is based on direct observation and self-reporting. Therefore, the findings should be understood as mainly indicative.

Data collected for these exercises should be understood as estimations only. IOM does not make any warranties or representations as to the appropriateness, quality, reliability, timeliness, accuracy or completeness of the data included in this report. On some occasions demographic percentages are slightly below or above 100 per cent due to rounding in calculations, as it also occurs when breaking down the relative flows of different nationalities through a border crossing.

*The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the report do not imply the expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries. IOM is committed to the principle that humane and orderly migration benefits migrants and society. As an intergovernmental organization, IOM acts with its partners in the international community to: assist in the meeting of operational challenges of migration; advance understanding of migration issues; encourage social and economic development through migration; and uphold the human dignity and well-being of migrants.*

*The maps displayed in this report are for illustration purposes only. The depiction and use of boundaries, geographic names and related data shown on maps and included in this report are not warranted to be error free nor do they imply judgment on the legal status of any territory, or any endorsement or acceptance of such boundaries by IOM.*
