# RETURN INTENTION SURVEY

AVRIL 2017

International Organization for Migration (IOM)

The UN Migration Agency

**DTM**

IOM is committed to the principle that humane and orderly migration benefits migrants and society. As an intergovernmental organization, IOM acts with its partners in the international community to: assist in meeting the operational challenges of migration; advance understanding of migration issues; encourage social and economic development through migration; and uphold the human dignity and well-being of migrants.

## Summary

The Return Intention Survey (RIS) is meant to streamline data collection efforts in order to gather information on the living conditions of IDPs in both formal and informal displacement sites. Such an exercise has the capacity to greatly contribute to determining concrete recommendations for the potential return of the affected population to their area of origin and thus the closure of sites through the analysis of needs, issues and concerns that are preventing the affected population's return to their previous community.

This pilot document presents sites profiles for each displacement sites surveyed, as well as a map of these sites.

## Methodology

IOM Haiti has undertaken a pilot of the RIS between the 18th and the 28th of April to better understand the circumstances of the displacement of individuals in the departments of Grande Anse and Sud. This exercise has been carried out, in a total of 4 communes. Individuals were randomly selected, were briefed on the goal of the survey and willingly provided information. The data collection was carried out in an interview/conversational format; minors were not interviewed. Data collection occurred during week days as part of daily DTM Site Assessments data collection exercise in the field.

The information collected is anonymous, omitting personal information and tracked the following:

- Demographic information (household size, age, previous occupation);
- Areas of origin;
- Available services at the displacement site;
- Priority needs, both at the site and place of origin;
- Humanitarian support received;
- Return intentions;

The sample is calculated through the overall IDP population per site with a margin of error of 5% and a confidence level of 95%.

The enumerators trained on the RIS methodology are current IOM employees, well versed in data collection activities. The current report presents site profiles created thanks to this pilot exercise.

For this pilot, IOM enumerators have been able to collect information in the following settlements:

Date	SSID	Site name	Dep	Com	Section Com	Households	Individuals	Number of RIS Forms	Status

28-04-17	721_02_S002	Ecole Nationale de Douyon	Sud	Port Salut	2eme Dumont	14	41	3	Ouvert

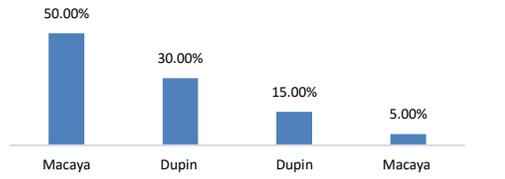

A total of 231 interviews were conducted in 9 sites; 4 in the department of Grande Anse and 5 in the Sud department. Individuals were selected at random, following a random sampling methodology and agreed to participate anonymously in the survey after having been informed of IOM's objectives in conducting the survey. The population interviewed were also briefed of their rights as voluntary participants.
