Services

The most pressing need in Golo and surrounding locations is for nutrition interventions and improvements in provision of minimum basic health package (MBHP).

The food security situation is critical as residents reported a reduced agricultural yield compared to last year's produce, due to a reduction in the size of land that was successfully cultivated.

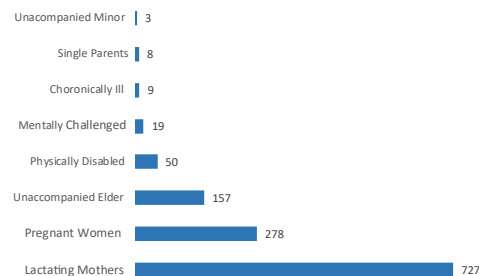

In terms of water, sanitation and hygiene (WASH) the most critical need is for clean drinking water for which the community can be provided with water filters, tablets for chlorination and jerry cans for safe storage of drinking water.

Three schools in Golo (one primary and two secondary) expressed a need for additional chairs and student kits. For the duration of the mission the general security situation in Golo town was calm and stable.

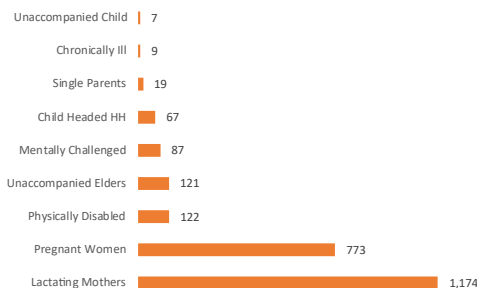

Vulnerability

Out of the registered individuals, the DTM team identified 3,360 individuals as most vulnerable including unaccompanied children and elders, pregnant and lactating women, mentally and physically challenged etc. of which 81 % are either pregnant or lactating women.

IDPs Vulnerable Cases

Returnees Vulnerable Cases

The IDPs have been displaced from 19 villages / locations in Darfur.

The returnees returned to three main locations (Golo town, Jokosti, and Boori).

Most of the IDPs were displaced between the month of January and March, 2016 (as reported).

Most of the returnees, returned during the month of June (as reported).

Notes:

As per the Recovery, Return, and Reintegration (RRR) Sector guidelines an assessment to confirm the voluntariness of the return needs to be conducted.

The beneficiary lists have already been shared with the key humanitarian partners.

Mission Duration:

27 February to 15 March 2017

The Mission was jointly conducted with HAC (State Level)
