THE UN MIGRATION AGENCY

### DISPLACEMENT TRACKING MATRIX

Funded by the European Union the Displacement Tracking Matrix (DTM) in Libya tracks and monitors population movements in order to collate, analyze and share information packages on Libya's populations on the move. DTM is designed to support the humanitarian community with demographic baselines needed to coordinate evidence-based interventions. DTM's Flow Monitoring and Mobility Tracking package includes analytical reports, datasets, maps, interactive dashboards and websites on the numbers, demographics, locations of origin, displacement and movement patterns, and primary needs of mobile populations. For all DTM reports, datasets, static and interactive maps and interactive dashboard please visit [www.globaldtm.info/libya/](http://www.globaldtm.info/libya/)

## OVERVIEW

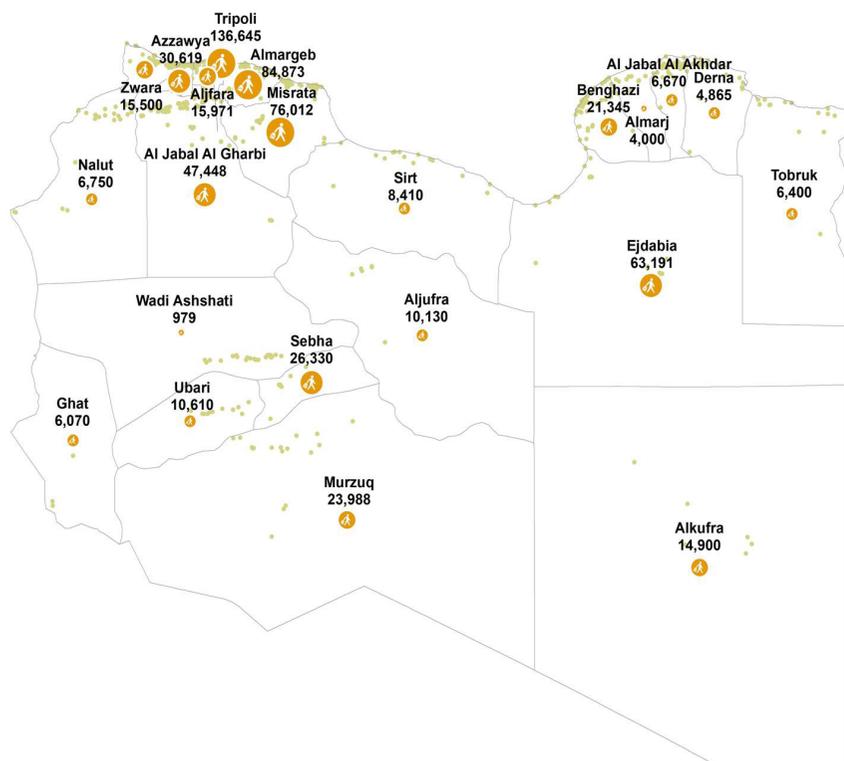

### FIGURES

OVERALL POPULATION PROFILE

**621,706** total

MIGRANT DISTRIBUTION PER MANTIKA

### CONTEXT

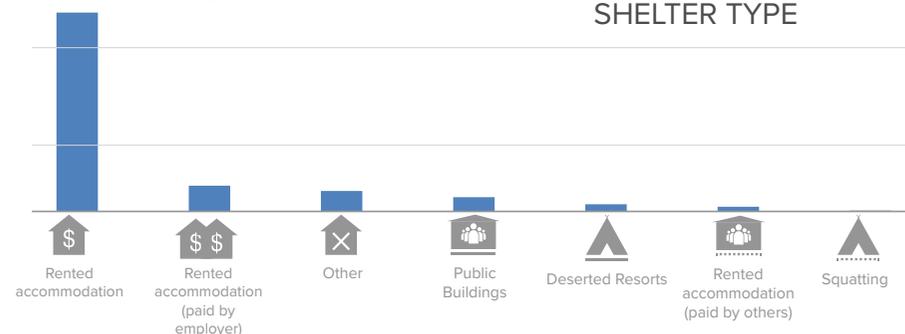

DTM Libya identified **621,706 migrants in December 2017**. During Round 16, IOM assessed all of Libya's 22 mantikas (regions) identifying migrants in 99 baladiyas and 544 muhallas. Up to 40 different nationalities were identified during this round.

Out of the total number of migrants identified, 575,569 individuals (93%) originate from 31 different African countries, 45,902 individuals (7%) from Asian and Middle Eastern countries and a final group of up to 235 individuals did not disclose a country of origin.

The top 4 nationalities identified were Egyptian, Nigerien, Chadian and Sudanese, together these nationalities account for up to 57% of Libya's migrant population. In addition to those identified in urban and rural settings DTM estimates the current number of migrants in Libya's Detention Centers at 5,189 individuals (1/08/17).

Part of IOM's effort to provide a comprehensive overview of Libya's migration dynamics, this report provides key insights into specific nationalities present across Libya. Based on 16,021 interviews in 138 locations this report delivers country-specific factsheets on the age, sex, areas of origin, levels of education, cost of journey, motives, and intentions of Libya's migrant populations. Libya's Flow Monitoring Migrant Profiles report is complimented by DTM's Flow Monitoring Migrant report that delivers a statistical breakdown of the number, nationalities and locations of migrants in Libya and the key transitory movements observed during the data collection period of December.

#### SHELTER TYPE

# METHODOLOGY

## OBJECTIVE

This report is part of IOM Libya’s Flow Monitoring operations, dedicated to delivering routine information packages on migration. Following consultations with humanitarian actors, Government and Donor stakeholders DTM Libya revised its methodology to broaden its assessment forms, revise how migrants are identified and expand its outreach. The Flow Monitoring Migrant Profiles are part of DTM’s 2017 initiatives towards creating more dynamic, accessible and stronger sources of data on migration in Libya.

This document is developed based on survey interviews with migrants at key locations (referred to as Flow Monitoring Points – FMPs). Profile surveys are used to periodically collect comprehensive information at monitoring points to understand the general and humanitarian situation of migrants across Libya.

Collected information includes location information, general movement flows, status, basic needs, availability of services and access to basic facilities at the location (if relevant). In addition, DTM’s Flow Monitoring operations look to deliver a sample profile of Libya’s migrant population to examine the main nationalities transiting through Libya, their vocational attributes, intended destinations and routes utilized to arrive to Libya. All of DTM’s Flow Monitoring efforts are accompanied by user-friendly datasets and maps.

## ENUMERATORS

## COVERAGE

in 138 Flow Monitoring Points...

16,021 migrants interviewed

...in 20 Mantikas

**Disclaimer:** The content of this report is based on the evidence collected during the survey. Thus the reported findings and conclusions represent the views and opinions of the surveyed households, for which DTM cannot be held responsible.

# MIGRANTS IN LIBYA - KEY FINDINGS

33% of those willing to return indicate better conditions as the main motive

## LEVEL OF EDUCATION

379 total number of migrants interviewed

2% of women 98% of men

# METHODOLOGY AND DEFINITIONS

DTM Libya categorizes migrant populations in Libya as Mobile & Visible and Mobile & Invisible.

The Mobile & Visible populations are primarily regarded as migrants that reside in Libya either for a short period or an extended period for the purpose of work. DTM data gathered through Mobility Tracking and Flow Monitoring modules is primarily focused on this category of migrants in Libya, due to the ability to have access to these populations.

The Mobile & Invisible migrants are primarily considered as transiting Libya through smuggling and trafficking networks. Access to these migrants is more difficult due to the nature of their presence in Libya and very little data can be obtained for this population.

The Mobile & Visible and Mobile & Invisible categories can be further refined into three different groups: Long-term migrants (mainly from Egypt, Niger, Chad, Sudan), circular migrants (mainly from Niger, Egypt, Bangladesh, Chad, Sudan, Tunisia, Algeria, Morocco), and transit migrants (mainly West and East African migrants).

Circular and transit migrants are more likely to attempt to leave the country either for Europe or back to their countries of origin in the case of an escalation of conflict, while long-term migrants are considered as having been in Libya for extended periods of time for work.

It is worth noting that these categories are fluid and migrants may transition between these different categories at various parts of their journey. As a country of destination and transit for migrant flows in the region, Libya is an important site for the study of regional flows to feed into a broader understanding of migratory drivers and

dynamics. IOM's DTM programme aims to analyse Libya's migration profile towards developing a more articulated and evidenced-based picture of migration in Libya.

IOM defines a migrant as any person who is moving or has moved across an international border or within a state away from his/her habitual place of residence, regardless of (1) the person's legal status; (2) whether the movement is voluntary or involuntary; (3) what the causes for the movement are; or (4) what the length of the stay is. For DTM programmatic purposes in Libya, a migrant is considered any person present in Libya who does not possess Libyan nationality.

Accordingly, DTM does not differentiate between migrant statuses, length of residence in the country, or migratory intentions. It counts as migrants those who may have come from refugee producing countries, along with long-term residents and labour migrants who engage in a circular migration pattern between Libya and their homes.
