

EMERGENCY EVENT TRACKING

Data collection: 10 April 2023

As a subcomponent of the Mobility Tracking methodology (Round Five), the Emergency Event Tracking (EET) tool is deployed to track sudden displacement, provide more frequent updates on the scale of displacement, and quantify the affected population when needed.

Event Overview

On 3 March 2023, intra-communal tensions within the Zaghawa community rose following the death of a Zaghawa tribesman in Haroun village of Kutum locality, North Darfur. Field teams reported that, on 2 April 2023, the Zaghawa community in Haroun village moved to the Ouro Bari (Kewell) area in Um Baru locality, North Darfur, due to fear of reprisals. The first EET update estimates a total number of 600 individuals (75 households) are currently seeking shelter in Ouro Bari (Kewell) area of Um Baru locality, North Darfur. Field teams report that there were no deaths, and that one individual has been injured. Field teams estimate that the entire IDP caseload are Sudanese nationals (100%). There are 10 individuals reporting losses of goods, cattle, and livestock. At least 109 cases of additional vulnerabilities in need of assistance and support were identified by key informants through DTM's Protection indicator. Additionally, DTM Sudan estimates that there are approximately 90 persons with disabilities among the IDP caseload.* Based on a ranking scale, the three priority needs across the caseload are WASH (Water, Sanitation, Hygiene), Food, and Emergency Shelter.

Demographics

Return Intention

Data collected through the return intention indicator estimates that the entire IDP caseload (100%) intends to remain in their current locations of displacement.
