

### OVERVIEW

During the month of July 2023, a total of 45,194 movements were recorded and 3,186 migrants were interviewed across 41 Flow Monitoring Points (FMPs) in Zimbabwe. The total movements recorded decreased by 5% compared to the previous month. Sixty-four per cent of movements observed were inflows, whilst 36% were outflows. The top three sending districts were Beitbridge (48%), Harare (14%) and Chiredzi (6%). Matabeleland South province recorded the highest number of outflows (53%) whilst Harare province recorded the highest number of inflows (35%).

The South Africa-Zimbabwe corridor recorded the highest movement of 37,110 (82%) followed by the Zambia-Zimbabwe corridor which recorded 5,108 (11%) movements. Forty-two per cent of movements along the South Africa-Zimbabwe corridor were short-term movements, 25% were long-term economic movements whilst 17% were for family reunification. Of the migrants travelling from South Africa, 31% were going to Harare, 22% to Beitbridge and 7% to Bulawayo.

The Zambia-Zimbabwe corridor consisted of 59% short-term movements, 23% family reunification movements and 18% long-term movements. Of the migrants travelling to Zambia, 85% were travelling from Harare, 6% from Bulawayo and 4% from Karoi.

Migrants travelling from Matabeleland South highlighted Limpopo (68%) and Gauteng (22%) as their intended destinations. Of the incoming migrants travelling to Harare, 44% were travelling from Gauteng, 24% from Lusaka and 16% from Western Cape.

### HIGHLIGHTS

# FLOW MONITORING REPORT

IOM ZIMBABWE | JULY 2023

JOURNEY PROFILES

## INTENDED DESTINATION COUNTRIES

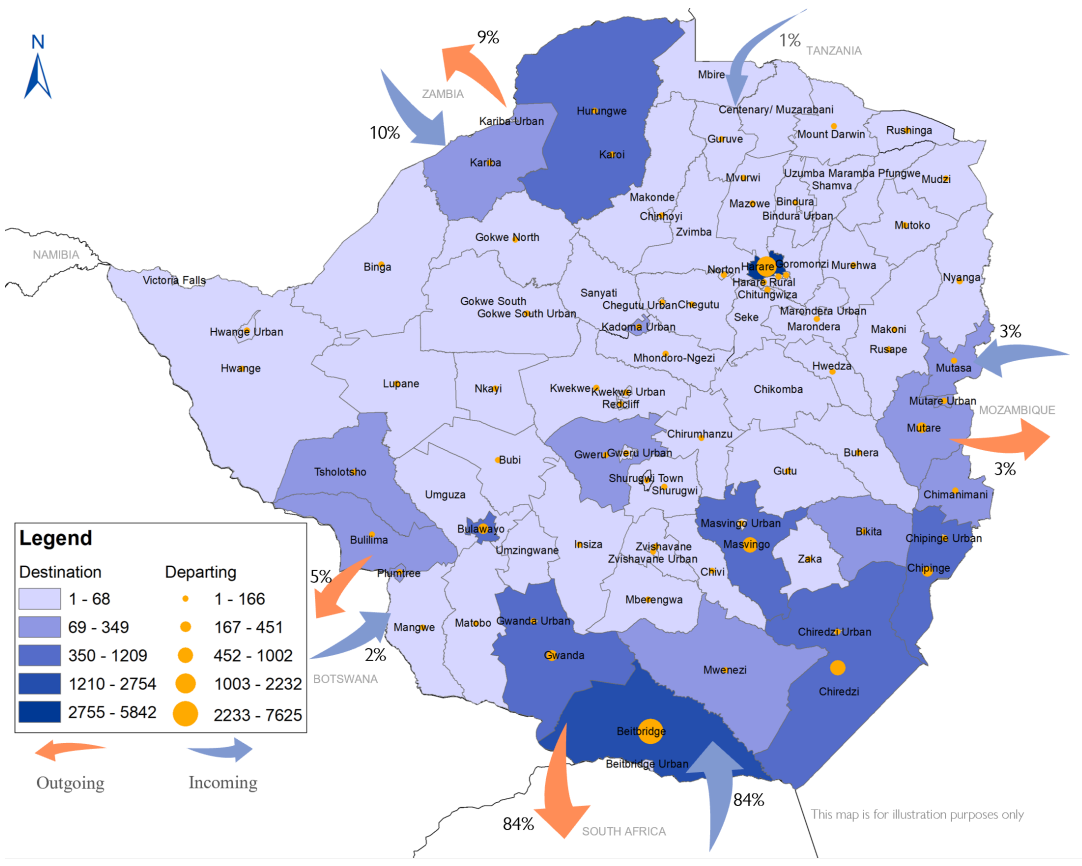

Seventy-six per cent of migrants indicated that South Africa was their final intended destination. Of the migrants going to South Africa, 27% were moving due to slow environmental change, 20% indicated that they were looking for employment whilst 16% were travelling for family reunification. According to migrants surveyed, the primary factors influencing their decision to choose South Africa as their destination country were either returning to their current job or finding a new job there (39%), attractive socio-economic conditions (24%), and reuniting with their families (22%). It was found that 25% of those travelling to South Africa were females aged between 26 – 35 years. Fourteen per cent of the surveyed migrants indicated that Mozambique was their final intended destination. Thirty-seven per cent indicated that they were travelling to conduct commercial activities, 37% were reuniting with family whilst 5% were travelling due to religious or cultural reasons. Thirty-one per cent of migrants travelling to Mozambique chose the country as their destination because they had family there, 20% due to the affordable prices and 19% due to the appealing socio-economic conditions. Nineteen per cent of those travelling to Mozambique were males aged 26-35.

## INTENDED PERIOD OF STAY BY DESTINATION

## MIGRANTS DEPARTED AND INTENDED DESTINATION DISTRICTS

Beitbridge (48%), Harare (14%), Chiredzi (6%), and Masvingo (6%) districts were the highest sending districts, while Harare (34%), Beitbridge (17%), Bulawayo (7%) and Hwange (6%) districts received the highest number of migrants during the reporting period. Of the surveyed migrants travelling to Zimbabwe, 56% were short-term local movements, 27% were travelling to reunite with their families whilst 9% were long-term economic movements. Forty-five per cent of the outgoing migrants indicated that their movements were short-term local, 32% were long-term economic movements whilst 15% were for family reunification. Twenty-eight per cent of the migrants travelling to South Africa were planning to stay for a period of between 3 months and 6 months whilst 27% were planning to stay for a period between 6 months and 12 months. Of the migrants travelling from South Africa to Zimbabwe, 34% were between 2 weeks and 3 months whilst 22% were planning to stay for less than 2 weeks.

**EMPLOYMENT STATUS**

Migrants Residing Outside Zimbabwe

Of the surveyed respondents who stated that they were Zimbabwean nationals but resided outside of Zimbabwe, 66% stated that they were employed in their country of usual residence, 17% were self-employed and 7% were unemployed. Of the respondents residing in Zimbabwe, 32% were self-employed, 31% were unemployed and were looking for employment, and 21% were employed. Female respondents made up 17% of the self-employed respondents while most of the unemployed migrants were males (18%). Most of the migrants who were self-employed as well as unemployed were between the ages of 26-35.

**SOURCES OF INCOME**

Migrants Residing in Zimbabwe

Of the 1751 migrants surveyed who stated that their place of usual residence was Zimbabwe, 45% stated that their source of income was through income-generating activities. 27% of these migrants resided in Manicaland, 21% in Masvingo, and 17% in Matabeleland South. Migrants residing in Bulawayo made up the highest number of migrants relying on remittances (37%), 20% in Masvingo, and 11% in Manicaland. Overall, female migrants residing in Zimbabwe were relying more on remittances as a source of income. Male migrants who stated that their source of income was through menial jobs resided in Bulawayo and Matabeleland South provinces.

**INCOME GENERATING ACTIVITIES**

Migrants Residing in Zimbabwe

Most of the migrants who stated receiving income from income generating activities were operating flea markets/ food stalls or vending stalls. A total of 37%, of which 22% were females. Thirty-one per cent were residing in Manicaland, 19% in Masvingo, and 13% in Matabeleland South. Female migrants were predominantly involved in poultry projects, hairdressing, and weaving, while male migrants were predominantly involved in casual work, gardening, and operating grocery stores.

### MAIN REASONS FOR THE JOURNEY BY GENDER

Migrants whose usual residence is Zimbabwe Top 10 reasons for Movement

During the reporting period, 35% of migrants were travelling to unite with family or attend family events. 26% stated they were travelling to conduct commercial activities while 15% stated that they were looking for employment.

Of the surveyed migrants who were travelling to South Africa and who also indicated that their place of usual residence was Zimbabwe, 26% stated that their reason for travel was to unite with family or attend family events. 17% of the surveyed migrants were female.

Travelling to conduct commercial activities, access services, and slow environment change were cited as the main reason for travel by female migrants. While male migrants cited, travelling to conduct commercial activities, looking for employment, and travelling due to work assignments or commuting regularly for work as their main reason for travel.

Of the migrants who stated that they were travelling to conduct commercial activities, South Africa, Zambia, and Mozambique remained the preferred destinations. Most migrants were travelling to purchase clothing and food, mostly in Mozambique and South Africa.

### WHAT ARE YOU PURCHASING IN THE INTENDED DESTINATION

### MAIN REASON FOR JOURNEY: ACCESS TO HEALTH

Thirty-one per cent of migrants surveyed stated that they had diabetes, 27% had hypertension whilst 12% disclosed that they had been diagnosed with cancer. Thirty-three per cent of those going to access General medical care were travelling from Hurungwe, 13% from Bulawayo whilst 13% were from Harare.

### HEALTH SERVICES ACCESSED IN DESTINATION COUNTRY

### WHY DID YOU CHOSE THIS FINAL DESTINATION?

Migrants whose usual residence is Zimbabwe

Thirty-nine per cent of those travelling to South Africa chose the destination because they were returning to their existing jobs or starting a new one there, 24% because of appealing socio-economic conditions whilst 11% chose the destination due to family reunification. The top three sending districts for those returning to their jobs were Bulawayo (26%), Beitbridge (13%) and Harare (11%).

Of the migrants travelling to Zambia, 38% chose the destination due to appealing socio-economic conditions there whilst 15% chose the destination due to affordable prices. Of those travelling to Zambia due to the appealing socio-economic conditions, 74% were planning to stay for 2 weeks or less whilst 11% were planning to stay for less than a day.

The top three reasons why migrants travelling to Mozambique chose the destination were to join family/relatives there (31%), appealing socio-economic conditions (19%) and affordable prices (19%).

### CHALLENGES ENCOUNTERED

585 migrants encountered challenges along their journey. Fifty-one per cent of those who faced challenges were female and of those, 47% were aged 26-35. Fifty-one per cent of the migrants experienced forced eviction or loss of housing/shelter, 13% discrimination and stigmatization, 11% encountered roadblocks and delays whilst 4% faced deportation. Migrants who encountered forced eviction from South Africa were travelling to Gwanda (16%), Bulawayo (14%), Tsholotsho (9%) and Chitungwiza (9%).

It was found that 50% of those who faced deportation went through the Zimbabwe-Botswana border whilst 44% went through the Zimbabwe-South Africa border. Twenty-eight per cent of those who faced deportation were males aged between 36 – 45 years.

Challenges	Botswana	Mozambique	South Africa	Zambia	Grand Total
Forced eviction or loss of housing/shelter	0	0	416	0	416

### VULNERABILITIES

**695**  
Pregnant Women

**339**  
Unaccompanied Children

**394**  
Persons with chronic illness

**231**  
Elderly in need of care

**67**  
Persons with a disability

Seventy-six per cent of the observed pregnant women were transiting along the Zimbabwe-South Africa corridor. Among the respondents, 418 reported having more than 8 members in their household and 323 were family members of a female-headed household. Sixty-two per cent of members of female-headed households were outflows and of those, 21% were travelling from Bulawayo, 11% from Beitbridge whilst 9% were from Masvingo.

Twenty-seven migrants had visual impairment and of those, 52% were transiting along the South Africa-Zimbabwe Corridor. Of those who started their journey in Zimbabwe, 41% were travelling from Bulawayo, 18% from Mwenezi whilst 12% were from Karoi. Their main reasons for travelling were to look for a job (24%), conducting commercial activities (18%) and access to services (18%).

It was found that 32% of the disabled migrants were inflows and of those, 59% were travelling along the Zimbabwe-Zambia border. The top three receiving districts for the incoming migrants were Hurungwe (41%), Masvingo (5%) and Zaka (5%).

# FLOW MONITORING REGISTRY REPORT

## ZIMBABWE – SOUTH AFRICA (BEITBRIDGE) | JULY 2023

### KEY FIGURES

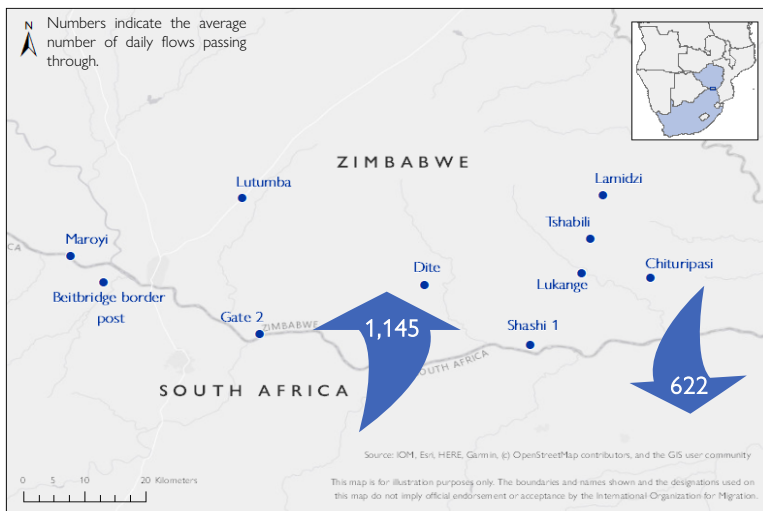

**37,110**  
Movements Observed

**2,154**  
Surveys Conducted

**15**  
Flow Monitoring Points

### OVERVIEW

Over the reporting period, a total of 37,110 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 1,767. This represented a 1 per cent decrease compared to June during which 1,777 individual movements were observed daily. South Africa (65%) and Zimbabwe (35%) were the main countries of departure whilst Zimbabwe (61%) and South Africa (35%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 37,110 individuals observed, 54 per cent were males and 46 per cent were females. There were 482 women who were visibly pregnant and 261 unaccompanied children were observed. Boys and girls (males and females below 18) made up 5 per cent of individuals observed. Twenty-eight per cent of the interviewed migrants were travelling for family reunification and 20 per cent were travelling due to slow environmental changes like loss of agriculture due to drought or death of livestock due to drought.

## ZIMBABWE (CHIRUNDU) – ZAMBIA | JULY 2023

### KEY FIGURES

### OVERVIEW

Over the reporting period, a total of 5,108 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 243. This represented a 16 per cent decrease compared to June, during which 288 individual movements were observed daily. Zambia (57%), Zimbabwe (31%), the United States of Tanzania (7%) and South Africa (5%) were the main countries of departure while Zimbabwe (64%), Zambia (32%) and South Africa (3%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 5,108 individuals observed, 38 per cent were males and 62 per cent were females. There were 171 women who were visibly pregnant. Boys and girls (males and females below 18) made up 6 per cent of individuals observed. Forty-one per cent of the interviewed migrants were travelling to conduct commercial activities while 15 per cent were travelling for family reunification. Forty-nine per cent of those travelling to conduct commercial activities were going to buy or sell clothes whilst 22% were going to buy/sell food

### CHRONIC ILLNESSES

# FLOW MONITORING REGISTRY REPORT

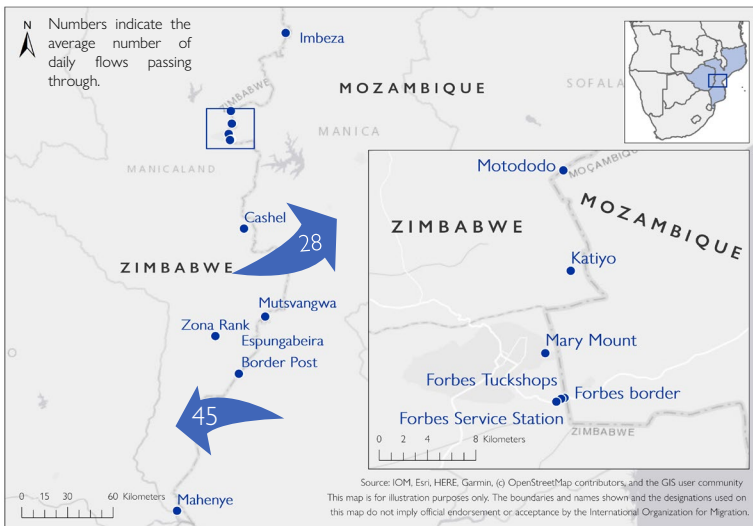

## ZIMBABWE (MUTARE) – MOZAMBIQUE (MANICA) | JULY 2023

### KEY FIGURES

### OVERVIEW

Over the reporting period, a total of 1,160 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 73. This represented a 38 per cent decrease compared to June during which 118 individual movements were observed daily. This decrease can be attributed to the fact that these are movements recorded along 10 FMPs unlike in June with 12 FMPs. Mozambique (61%) and Zimbabwe (39%) were the main countries of departure while Zimbabwe (61%), Mozambique (39%), and South Africa (1%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 1,160 individuals observed, 50 per cent were females and 50 per cent were males. There were 18 women who were visibly pregnant. Boys and girls (males and females) below 18 made up 11 per cent of the individuals observed. Forty per cent of interviewed migrants were travelling for family reunification while 31 per cent were travelling to conduct commercial activities.

## ZIMBABWE – BOTSWANA (PLUMTREE) | JULY 2023

### KEY FIGURES

### OVERVIEW

Over the reporting period, a total of 1,816 cross-border movements were observed at the Flow Monitoring Points (FMPs). The average daily number of flows was 121. This represented a 19 per cent increase in the number of movements compared to June during which 102 individual movements were observed daily. Zimbabwe (54%), Botswana (27%) and South Africa (18%) were the main countries of departure while Zimbabwe (45%), Botswana (41%) and South Africa (14%) were the main countries of the intended destination of individuals passing through the different FMPs. Out of 1,816 individuals observed, 56 per cent were males and 44 per cent were females. There were 24 women who were visibly pregnant. Boys and girls (males and females) below 18 made up 4 per cent of the individuals observed. Of the surveyed migrants, 33 per cent were travelling to look for jobs while 32 per cent were travelling for family reunification.

### VULNERABLE GROUPS

### CHRONIC ILLNESSES

### CONCLUSION

From the analysis, travel by female migrants is at par with male migrants, however, the reasons for movements vary. Female migrants are 3 times more likely to travel for medical and health reasons, with most choosing South Africa and Zambia as their destination for health services. Overall, both male and female migrants stated travelling to conduct commercial activities as a reason for their travel.

Regarding age analysis, it was observed from the surveys conducted that females aged between 18-25 years were migrating frequently to South Africa, majority of them had started their journey in Bulawayo. While male migrants between the ages of 26-35 were predominately travelling to South Africa in search of employment with the majority (12%) originating from Bulawayo. Migrants above the age of 56 years were observed along the Zimbabwe-Zambia corridor and Zimbabwe-South Africa corridor. The reason for travel was mainly to reunite with family in the destination country.

The surveys also recorded non-Zimbabwean nationals who were transiting through the various flow monitoring points. These consisted of Zambians (39%), Mozambicans (27%), South Africans (18%), Malawians (6%), Congolese from the Democratic Republic of the Congo (5%), Tanzanians (3%) and Motoswana (1%).

### METHODOLOGY

Flow Monitoring is a data collection activity which seeks to gather key information on mobility and migrant profiles. It begins by identifying zones in which large mobility flows occur and highlighting the characteristics and journeys of travellers in these zones. DTM teams, with the support of local authorities and partners, identify strategic points of transit, where Flow Monitoring Points (FMPs) are set up. At each FMP, DTM conducts two main activities: Flow Monitoring Registry (FMR) and Flow Monitoring Surveys (FMS). The tools collect data at FMPs through direct observation and interviews with key informants, including staff working at transit stations, border patrol officers, local authorities, bus or taxi drivers and travellers themselves.

The FM tools gather data on the number of travellers crossing FMPs, as well as the provenance, next destination, vulnerabilities, challenges, reasons and means of transport of travellers. At each FMP, data is collected by a team of enumerators. Data collection is carried out daily, between 8:00 am and 5:00 pm. Enumerators collect data via a mobile data collection form to ensure data integrity and quality. This report is an overview of the data collected from 1 to 31 July 2023.

### LIMITATIONS

Data collected in the framework of Flow Monitoring activities are the result of direct observations and interviews conducted at FMPs between 8:00 am and 5:00 pm. The data are not representative of all migration flows in the border area, and, because they only reflect the situation of observed or surveyed individuals, cannot be generalized. Temporal coverage of the data collection exercises is also limited to a specific time window. While data is collected daily, Flow Monitoring activities do not capture all flows transiting through FMPs. Data on vulnerability is based on direct observation and self-reporting. Therefore, the findings should be understood as mainly indicative.

Data collected for these exercises should be understood as estimations only. IOM does not make any warranties or representations as to the appropriateness, quality, reliability, timeliness, accuracy or completeness of the data included in this report. On some occasions demographic percentages are slightly below or above 100 per cent due to rounding in calculations, as it also occurs when breaking down the relative flows of different nationalities through a border crossing.

*The opinions expressed in the report are those of the authors and do not necessarily reflect the views of the International Organization for Migration (IOM). The designations employed and the presentation of material throughout the report do not imply the expression of any opinion whatsoever on the part of IOM concerning the legal status of any country, territory, city or area, or of its authorities, or concerning its frontiers or boundaries. IOM is committed to the principle that humane and orderly migration benefits migrants and society. As an intergovernmental organization, IOM acts with its partners in the international community to: assist in the meeting of operational challenges of migration; advance understanding of migration issues; encourage social and economic development through migration; and uphold the human dignity and well-being of migrants.*
