TRACKING MATRIX

This report aimed to present an overview of migrant presence in Türkiye on a quarterly basis. For more information, please see Methodology and Limitations section on page 9 and 10.

Background and Key Findings

According to the latest available figures from the Turkish Presidency of Migration Management (PMM), there are more than 4.7 million foreign nationals present in Turkish territory, 3.6 million of whom are seeking international protection. Most are Syrians (3,279,152¹ individuals) who are granted temporary protection status. In addition, international protection applicants from countries including Iraq, Afghanistan, the Islamic Republic of Iran and Ukraine constitute another group of foreign nationals. According to PMM, there were 33,246² international protection applicants present in Türkiye in 2022, published annually. Moreover, according to United Nations High Commissioner for Refugees (UNHCR), there were 304,697³ refugees and asylum-seekers in Türkiye as of 2022. Since June 2023 the number of Syrians residing in camps has increased by 9,098.

Methodology

Data Collection

The data presented in this report is compiled from secondary sources on a quarterly basis. The data is collected between the first and tenth days of each month following the reporting period, depending on the availability of the data from secondary sources. These sources encompass data and statistics provided by government authorities and UN organizations. No primary data collected by the MPM programme is presented in this report. The selection of sources is undertaken with the intent of achieving a comprehensive portrayal of the migration context and flows in Türkiye.

Data Categories

The report focuses on several distinct categories of migration data:

- 1. Migrants present in Türkiye by migration status:** This presents data on the stock of migrants reported to be in Türkiye by their migration status. Distinction is made between individuals with a refugee status, individuals with a temporary protection status, and individuals who hold a residence permit. Data is extracted from PMM and UNHCR statistics.
- 2. Migrants in an irregular situation by nationality:** This category pertains to migrants who find themselves in irregular or undocumented situations. Information is gathered from the PMM statistics.
- 3. Migrants intercepted or rescued at sea:** This is flow data on migrants who are intercepted or rescued while attempting to cross by sea to Europe. It is collected from TCG regular reports. The reports include the number and self-declared nationalities of migrants intercepted or rescued by the TCG whether at sea or land.

Limitations

Source Reliability

While the data sources were chosen for their credibility and authority, inherent limitations of secondary sources exist. Different sources may employ varying methodologies and denitions for data collection, leading to potential variations in the reported figures. For instance, according to IOM Glossary on Migration (2019), migrant in an irregular situation is defined as a person who moves or has moved across an international border and is not authorized to enter or to stay in a State pursuant to the law of that State and to international agreements to which that State is a party. Nevertheless, IOM is unable to confirm the criteria used by the PMM in practice to identify migrants in an irregular situation. Additionally, the accuracy of the data relies on the transparency and accuracy of the original reporting entities.

Data Accuracy and Verification

Despite efforts to validate and cross-reference data from various secondary sources, it is important to acknowledge that the accuracy and reliability of the compiled information might not be fully verifiable. Secondary data inherently presents a challenge in terms of traceability to original data collection processes. Therefore, inability to directly verify the accuracy of the data remains a limitation, and it is recommended that users of this report exercise caution and consider the potential margin of error associated with the data.

Data Gaps and Incompleteness

Migration data is often affected by gaps due to the informal nature of some migration movements and the challenges of data collection. The report acknowledges the possibility of underrepresentation or omission of certain migration flows or presence due to factors such as incomplete reporting, differing denitions, and unreported cases.

Generalization and Predictive Limitations

While the data analysis provides insights into overall migration context in Türkiye, caution should be exercised when generalizing findings to specific cases or predicting future trends.
