ROUND 11: MAY/JUNE 2018
Summary of key findings
DATE OF PUBLICATION: 15 JULY 2018

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA, ETHIOPIA ROUND 11: MAY/JUNE 2018

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION ETHIOPIA

ROUND 11: MAY - JUNE 2018

OROMIA REGION - KEY FINDINGS

LOCATION AND CAUSE OF DISPLACEMENT:

777,047 displaced individuals comprising 126,777 households in 459 displacement sites were identified in Oromia region*. These figures represent an increase of 55,740 in the total individuals (+7.73%) an increase of 8,550 households (+7.23%) and an increase of 39 sites (+9.29%) since round 10 (March/April 2018). 71.68% sites opened in 2017 and 13.3% opened in 2018. Conflict was the primary cause of displacement for an estimated 81% of the displaced population.

DEMOGRAPHICS: 51% of displaced individuals were female and 49% were male. 59% were younger than 18 years old. 6% were over 60 years old.

SHELTER: 63 sites reported that over 25% of households were living in shelters that were below regional and cultural standards.

WASH: Only 26 sites meet SPHERE standards of access to over 15 liters of water per person per day. 215 (47%) displacement sites reported having no latrines.

FOOD, NUTRITION AND LIVELIHOODS: 74 (16%) sites, representing 199,846 individuals, reported no access to food. 77% of sites reported that IDPs did not have access to income generating activities.

HEALTH: Pneumonia was the primary health concern in this round of data collection with 134 sites reporting this.

EDUCATION: In 27% of sites 50% or less of the children on site are attending formal primary school. Formal primary school education is available at 350 sites. Alternative basic education (ABE) is available at 41 sites.

COMMUNICATION: 49% of sites reported that Site Management were IDPs primary source of information followed by Local Leader at 26% of sites.

Figure 1 shows IDP numbers disaggregated by cause over time.

* 90 sites were inaccessible in this reporting period.

OROMIA REGION IN CONTEXT

The most significant conflict incident reported during this reporting period occurred in West Guji zone. The most affected Woredas were: Karcha, Hamballa Wamana, Bule Hora, Abaya, Birbira Kojowa and Galana. The conflict occurred between the Guji clan from Oromia Region and the Gedio clan from Southern Nations Nationalities and Peoples Region (SNNPR). The conflict was reportedly over resource competition and border disputes. The majority of the displaced population is hosted in schools, health centers, and Woreda administration buildings.

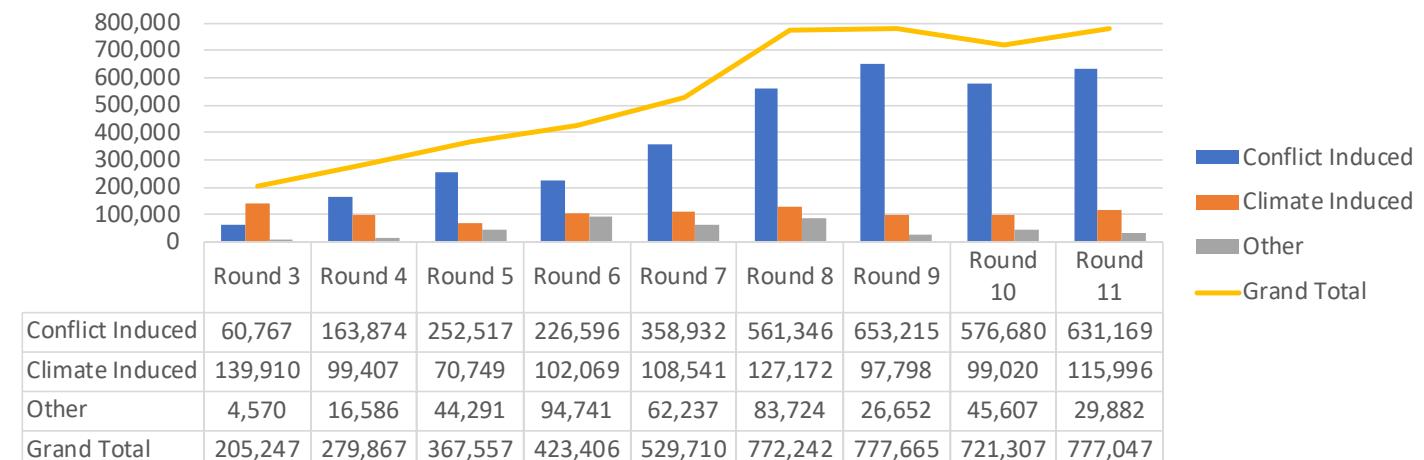

Figure 1: IDPs by cause of displacement by round

MOBILITY TRENDS AND CAUSE OF DISPLACEMENT

At 109 sites new IDP arrivals were recorded in 2018 while at 295 sites the last new arrivals were recorded in 2017.

13.3% of all sites identified opened in 2018 while 71.68% opened between January and December 2017. 15.03% of sites opened before 2017.

Figure 2 shows the number of IDPs displaced by zone and cause of displacement. Figure 3 shows the distribution of IDPs by driver of displacement and time of displacement.

65.07% of IDPs in the region are internally displaced from the region, within the region. Of the IDPs displaced within the region, 54.05% were displaced within their zone of origin.

34.31% (266575) of IDPs had reportedly been previously displaced. IDPs from 88 (19%) sites were leaving the site. Of these, IDPs from 16 sites were going to the nearest village and IDPs from 2 sites intended to return to their place of origin.

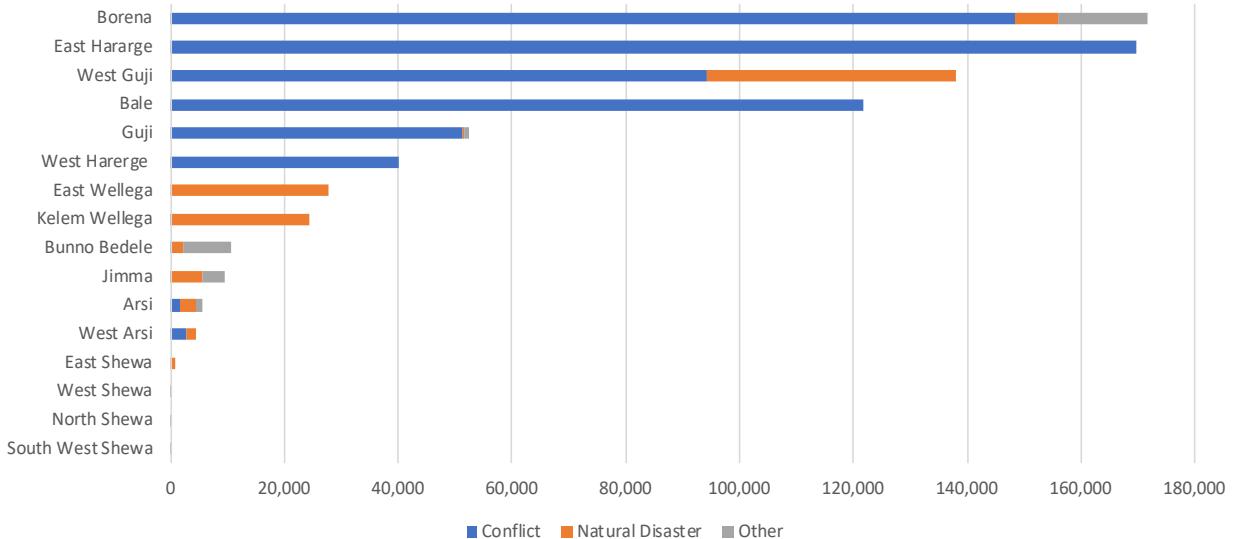

Figure 2: IDPs displaced by zone and cause of displacement

	In 2018	In 2017	Before 2017
Conflict	114,090	425,366	91,713
Natural Disaster	10,180	15,767	90,049
Other	176	11,903	17,803

Figure 3: Distribution of IDPs by cause of displacement and time of displacement

DURABLE SOLUTIONS, VULNERABILITIES AND DEMOGRAPHICS

At 51.42% of sites IDPs foresaw a resolution to their displacement, while IDPs at 48.15% of sites did not. At the remaining sites key informants either did not know (0.44%), or were not asked the question in a previous round.

At 31.15% of sites IDPs prefer reintegration as a durable solution to their displacement while at 21.79% sites they prefer return. 46.62% of sites reported that IDPs prefer relocation. At 0.44% of sites this information is unknown.

Figure 4 shows the percentage of sites reporting various obstacles to returns, while figure 5 shows support IDPs need to return or reintegrate.

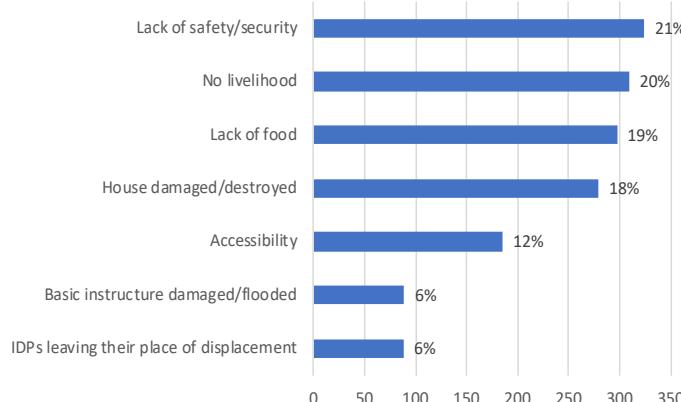

Figure 4: % Sites reporting obstacles to return

The demographic breakdown is shown in figure 6. Individuals with specific vulnerabilities were also reported at displacement sites and are represented in figure 7.

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION ETHIOPIA

ROUND 11: MAY - JUNE 2018

ABOUT DTM

DTM GLOBAL

The Displacement Tracking Matrix (DTM) is a system to track and monitor displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route. More information is available at www.globaldtm.info.

DTM IN ETHIOPIA

In Ethiopia, data is collected at zone, woreda and site level. Since September 2016, eleven rounds of assessments have been completed. The DTM programme is implemented in close collaboration with the National Disaster Risk Management Commission, regional, zonal and woreda counterparts and DTM's implementing partner, the Danish Refugee Council (DRC).

METHODOLOGY

IOM's DTM team composed of enumerators from IOM and DRC were deployed across the country to collect the data. The process involved the following steps:

Zone level: Interviews with key informants from

the Disaster Prevention and Preparedness Office (DPPO), community representatives, and the education and health offices collect information including (among others) estimated caseload of displaced population, identification of woredas within the zone that host displaced populations, reason for displacement, time of arrival of IDPs and location of origin.

Woreda level: Information is collected from key woreda informants and includes (among others) estimated length of stay, number of displaced households and individuals at woreda level, displaced population by type of temporary settlements and approximate locations of identifiable displacement sites. The information is used to plan site assessments.

Site assessments: In-depth IDP site assessments capture detailed information through key informant interviews, direct observation and focus group discussions with male, female, elderly, children and IDP representatives. Data on available services by sector, accessibility constraints, exact type, location and name of the site, place of origin of IDPs, estimated size and type of the site and most common type of shelter are captured. Age and gender disaggregation for the site is extrapolated using a demographic calculator

tool based on the age range and sex of the household members of 20 randomly selected households from the site.
