

KEY MESSAGES

- A total of 44 entries and no exits were recorded this week. The number of entries increased from last week.
- The majority of new arrivals cited lack of food as their reason for displacement (80%), rejoining families (9%) and uncomfortable conditions (11%) as their reason for entry.
- More than half of the new arrivals came from Belet xaawo (18%), Garbaharey (18%), Xudur (9%), Belet Wayne (9%) and the remaining came from Ethiopia (45%).
- Most of the new arrivals went to Qansaxley IDP site except for two families which rejoined their families in Kabasa IDP site.

Figure 1: MTT ENUMURATOR INTERVIEWING

METHODOLOGY

Movement Trend Tracking (MTT) is a movement monitoring exercise that tracks people who are moving in or out of sites on a semi-permanent or permanent basis. MTT aims to gauge the pulse of movements in and out of sites in Dolow.

MTT figures should not be considered official updates to the population figures of the sites. Rather, the data represents the intentions of IDPs and points towards general trends in their movements.

In Dolow, IOM enumerators are positioned at the 2 main IDP sites, Kabasa and Qansaxley, 7 days a week from sunrise to sunset. The teams identify people who are moving in or out of the sites with luggage. Interviews are done with the individual or the head of household.

MTT aims to complement existing information management products on displacements and movements in Dolow, by providing site level specific data on population movements on a regular basis, to assist agencies operating in sites and settlements with key information on: demographics of movement, area of origin, area of return/onward movement, reasons for movement and movement trends over time.
