## New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) measurement and signs of Oedema was conducted by Sector partners for 588 children of 6-59 months. Of the 588 children screened, the MUAC reading for 144 children (137 from inaccessible and 7 from accessible area) was in the Red category, the reading for 115 children was in the Yellow category and 329 had readings measured in the Green category. No case of Oedema was reported in any of the eight LGAs that were covered.

The results also include 48 children from neighbouring regions (28 who arrived at Bama, 18 at Mobbar and 2 in Ngala LGAs); out of which 34 children were in the Green category, 7 in Yellow category and the remaining 7 in the Red category. All children found with severe acute malnutrition have been admitted for treatments. Please note, the data presented are not surveillance results and should be interpreted with caution.
