

**Context:** The crisis currently affecting the Lake Chad Basin states results from a complex combination of factors, including conflict with non-state armed groups, extreme poverty, underdevelopment and a changing climate, which together have triggered significant displacement of populations. As of October 2023, Cameroon, Chad, Niger and Nigeria were hosting an estimated **5,990,879 affected individuals** made up of internally displaced persons (IDPs), returnees (former IDPs and returnees from abroad) and refugees (both in- and out-of-camp). Thirteen per cent of the affected population (**774,927 individuals**) were located in **Cameroon**, while 5 per cent resided in **Chad** (**307,693 individuals**), 7 per cent in **Niger** (**446,903 individuals**) and finally, 75 per cent in **Nigeria** (**4,461,356 individuals**). Overall, the numbers show a slight decrease in IDPs (-2%) but increases in returnees and refugees since December 2022. **The IDPs numbers have increased in Cameroon (+11%), Chad (+4%) and Niger (+2%) but have shown a slight decrease in Nigeria (-3%).**
