Overview of the Multi-Sectoral Assessment of Needs

This factsheet aims to provide a snapshot of multi-sectoral conditions, needs, and challenges among Myanmar migrants in Ranong province as captured between September and November 2023 by IOM Thailand's multi-sectoral assessment of needs. The purpose of this assessment is to provide insights regarding the severity of needs among migrant populations, identify vulnerable population groups and geographic areas with the most acute needs, inform assistance planning and relevant Sustainable Development Goals (SDGs) targets, and provide sectoral and inter-sectoral baselines for future assessments.

Methodology

The tool was developed by IOM's Migration Data and Research Unit (MDRU) in collaboration with various sectoral IOM units specialized in labour, health, protection topics, among others. The survey is conducted at household level, but also includes questions for which the respondent had to answer on behalf of every member of their household (for example, the ages of all members of the household). IOM surveyed a representative sample randomly selected within the population of interest, which included Myanmar migrants in Ranong. IOM sought an equal balance between female and male respondents. In Ranong, answers from 636 respondents were analysed. Counting all respondents and their household members, 1,772 individuals are represented by this assessment.

Due to the high number of indicators of interest, the survey was split into two tools: tool 1 focusing on questions about multi-sectoral conditions (MSA) and tool 2 on access to services (ASI). Respondents were interviewed using either one of these tools, never both. Some questions, however, particularly those regarding demographics and migration history, were covered in both tools to understand the basic profiles of all participating respondents and their households. As a result, the sample size for data analysis varies between indicators. Questions which appeared only in one of the tools are representative at a 90 per cent confidence interval with a 5 per cent margin of error. Questions which were covered in both tools have a 95 per cent confidence interval with a 5 per cent margin of error.

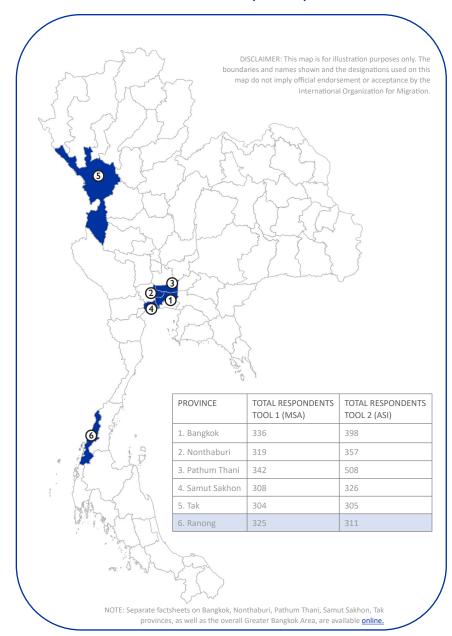

Primary data collection period

Data was collected from 27 September to 29 November 2023.

Limitations

Certain indicators may be under-reported or over-reported, due to the subjectivity and perceptions of respondents (especially "social desirability bias"— the documented tendency of people to provide what they perceive to be the "right" answers to certain questions). These biases should be taken into consideration when interpreting findings. In addition, the findings are representative for the assessed provinces, but cannot be extrapolated to other regions of Thailand. Some questions were only asked to a subset of respondents who answered affirmatively to preceding questions. The analysis on subsets of respondents should only be considered as indicative, as the sample size of the subsets does not meet the threshold required to be statistically significant. Also, graph titles with an asterisk denote questions where respondents could provide multiple answers. As a result, the totals for these graphs may exceed 100 per cent. Finally, where the percentage reported is zero, this does not necessarily imply that zero cases were recorded for a particular answer. It can instead indicate that the case number was so low that the results were rounded down to zero.

Provinces where the survey was implemented

The gender makeup of respondents was 58 per cent women and 41 per cent men. There were 1 per cent of respondents who identified as another gender. The average age among respondents was 37.8 years and the average number of people living in surveyed households was 2.8. Regarding vulnerabilities, no households reported having a member with a disability.

Origin regions/states in Myanmar (top 3 labeled)

Among surveyed migrants in Ranong, the top three states or regions of origin were Tanintharyi (66%), Mon (12%), and Yangon (10%). Some respondents (10%) reported that their most recent migration to Thailand occurred sometime after the military takeover in Myanmar in February 2021. Of these more recent arrivals, 17 per cent indicated that they had lived in Thailand for a total of three years or longer, 58 per cent had lived in Thailand for around two years total, and 25 per cent around one year total (this includes living in Thailand during prior migrations). Among all respondents, 11 per cent reported having engaged in repeat migration to Thailand. The average cost of migration was 4,957 THB (around 140 USD). Respondents indicated paying for services and components such as travel (86%), documentation (61%), brokers (15%), medical exams (9%), and bribes (6%).

Since their most recent migration to Thailand, 38 per cent of respondents have visited Myanmar, including 20 per cent of respondents whose most recent migration took place sometime after the military takeover in Myanmar. Among all respondents, 3 per cent intended to visit Myanmar within the following year. At the same time, 78 per cent responded that they did not know whether they would visit Myanmar in the future and 16 per cent had no intentions of doing so. Meanwhile, 19 per cent intend to return permanently to Myanmar sometime in the future.

Most migrants (75%) reported having the valid documentation required to stay in country, although 25 per cent of respondents are considered to be irregular due to holding incorrect or expired documentation, or no documentation at all. Among those who do possess documentation, the most common types included having an certificate of identity or temporary passport (83%), labour card (23%), and international passport (11%). However, 6 per cent were not aware of how long their documents permitted them to stay in Thailand.

Only 1 per cent of respondents indicated having arrived in Thailand under its Memorandum of Understanding (MoU) with Myanmar during their most recent migration. Of these, 25 per cent indicated that their MoU agreement is already expired. A further 3 per cent are not aware about the expiration of their work permit.

Based on respondents' information on the documentation status of each individual in assessed households, 76 per cent of households are completely documented, meaning every member has some form of documentation allowing them to stay in Thailand. In 14 per cent of households, over half of all members are documented. However, in 8 per cent of households, less than half of all members are documented, and in an additional 2 per cent of households, no one is documented. Regarding regularization windows that permit undocumented migrants to become documented, respondents were most likely to be aware of the regularisation process but have not pursued it (59%).

25% Percentage of respondents who were found to be irregular migrants

Among adults in assessed households, 43 per cent had less than a primary school education, 46 per cent completed primary school, 9 per cent completed lower secondary school, and 2 per cent had completed upper secondary school or higher. Among all individuals in assessed households, 3 per cent had reached the expected level of education for their age (for example, those between 11 and 15 years old are expected to have completed primary school).

Among children in assessed households, 43 per cent were not attending school or other learning facilities.1 Overall, 89 per cent of households with primary schoolaged children reported experiencing barriers sending children to school. The same was true for 92 per cent of households with secondary school-aged children.

Main barriers to sending children to school*2

² Among respondents who cited experiencing barriers sending children to school (19 primary school-aged girls, 6 primary school-aged boys, 3 secondary school-aged girls, 10 secondary school-aged boys).

8.5

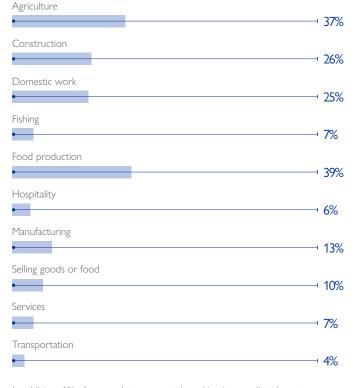

Average number of months respondents were employed in the last year

1.2

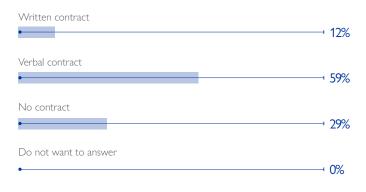

Average number of employers respondents had in the 12 months prior to being interviewed

Respondent work sectors*

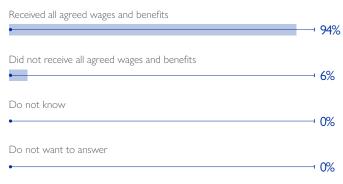

In addition, 1% of respondents reported working in an unlisted sector.

Possession of contracts among respondents who worked in the past year

Reception of wages and benefits during employment

Regarding employment, about half of respondents (49%) had been employed for all 12 months in the last year, while 17 per cent were employed for five or fewer months and 9 per cent did not work at all in the last year. Among those who worked within the year prior, the most common work sectors included food production (39%), agriculture (37%), construction (26%), and domestic work (25%). Repondents also reported manufacturing (13%) and selling goods or food (10%) as other common work sectors.

Regarding agreements with employers, 71 per cent of respondents who worked reported having made a contract, with 12 per cent having a written contract and 59 per cent having only a verbal one. Moreover, 29 per cent of respondents reported not having a contract.

On average, respondents reported working 22.6 days in the month prior to assessment. The median daily wage reported in Ranong was 350 THB per day (10 USD). Furthermore, 56 per cent of respondents were earning below minimum wage (332 THB per day). In addition, 6 per cent reported not receiving all agreed upon wages and benefits during their employment.

⁴ The median daily wage represents the cut off where 50 per cent of respondents earn less than the median and 50 per cent earn more.

Food-related indicators

Percentage of households that indicated a borderline or poor Food Consumption Score, which measures dietary diversity and food frequency

Percentage of households that indicated severe hunger on the Household Hunger Scale

Percentage of households using high level coping strategies per the reduced Coping Strategies Index, which measures hardships due to food shortages

Percentage of households spending a high or very high proportion of their household income on food per the Household Expenditure Scale

3,660

Average amount of money (THB) spent on food in the last month per household (around 102 USD)

Top 3 sources of food*

Livelihood-related indicators

Average change in household economic status in the past year

Average change in household cost of living in the past year

Top 3 sources of income^{*}

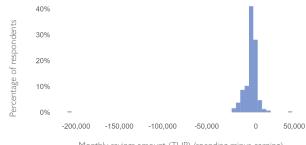

Overall, findings regarding food security showed a positive result for most respondents. The Food Consumption Score was acceptable for 99 per cent of households, and 95 per cent indicated no or little hunger, as measured by the Household Hunger Scale. Regarding expenditures, 1 per cent of households spend a high or very high percentage of their household budget on food. Furthermore, 11 per cent of households scored high on the reduced Coping Strategy Index, which captures how many days a household had to adopt coping strategies to deal with lack of food or money to buy it.

Respondents indicated that, on average, their economic status remained unchanged in the past year while their household cost of living increased a little. Household debt was not uncommon (39%), with households owing 23,808 THB (around 664 USD) on average. Reasons for debt included food (54%), housing (48%), and migration costs (46%). Additionally, the average percentage of household expenditure on debt was 5.7 per cent. Sixty-one per cent of households reported sending remittances in the last month. Regarding savings, a quarter (24%) of respondents reported spending more than they earned in the last month.

Savings distribution

Monthly savings amount (THB) (spending minus earning)

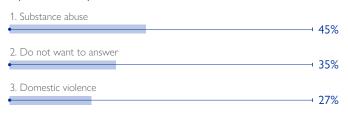

Regarding perceptions of safety, the most common risks to adults cited by respondents include substance abuse (45%), domestic violence (27%), and participation in illicit activities (23%). Over a third (35%) did not want to answer.

Overall, 84 per cent of respondents were not aware of any services available to them. Among those who were aware, they were most likely to know about medical services (10%).

Respondents were also asked whether they agree or disagree with statements related to gender roles and perceptions about responsibilities in the household. In general, respondents had positive views about gender equality, with the majority agreeing that women should participate in making important decisions in the household (88%) and be able to express their own opinions (88%). On the other hand, 91 per cent agreed that men should be the providers of their families.

Based on several proxy indicators, 1 per cent of respondents were classified as living in locations with possible trafficking risks.

Top 3 risks faced by adults*

Child marriage was found to be present in 4 per cent of households with children. Child labour was found in none of the assessed households. At the same time. respondents cited child marriage (37%) as a primary risk to girls and child labour (22%) as a primary risk to boys. Sexual abuse (26%) was also reported as one of the main risks to girls, while substance abuse (38%) was reported as the main risk to boys. Additionally, 37 per cent of respondents did not want to answer the question on the main risks faced by girls and boys.

4% Percentage of households with child marriage

Percentage of households where children are working over the legal allowances

Percentage of households with a child who is not a relative of the respondent

Main risks faced by girls in respondents' locations*

1. Child marriage

2. Do not want to answer

3. Sexual abuse

Main risks faced by boys in respondents' locations*

1. Substance abuse

2. Do not want to answer

3. Child labour

----- 22%

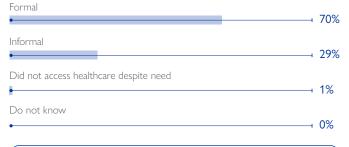

38%

37%

Regarding access to health, almost a quarter (23%) of respondents reported having household members who were in need of healthcare services in the last three months. Among these, 70 per cent went to formal healthcare providers, 29 per cent went to informal, and 1 per cent chose not to access healthcare despite their need. Barriers to accessing healthcare services were experienced by 8 per cent of respondents, who cited language (48%) as the most common barrier. Healthcare expenses (43%) as well as distance (43%) were also common barriers to accessing health services. Regarding children's vaccinations, 87 per cent of children were reported to be upto-date on their vaccinations and 93 per cent possessed an immunisation card.

Regarding health insurance, 6 per cent of households lacked any insurance. However, in 61 per cent of households, every member had some form of insurance. Government insurance (78%) was the most common insurance type among respondents.

Health access class*

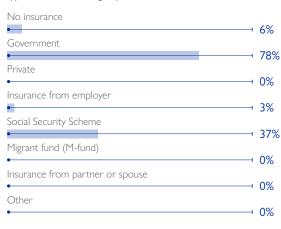

Health access class is based on where household members have sought healthcare in the last three months. Formal health locations include government, private, or NGO hospitals or clinics. Informal include traditional healers, pharmacies, and others.

Health insurance indicators

Proportion of household members with insurance

Types of insurance among respondents

Average rating of usability of health insurance

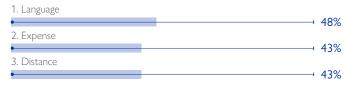

Note: No respondents cited that using health insurance is difficult or very difficult.

8% Percentage of households experiencing barriers to accessing health services

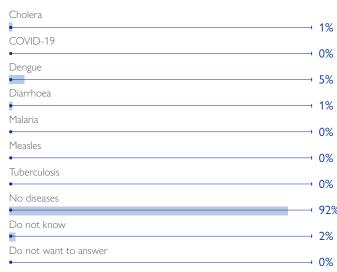

Top 3 barriers to accessing health services*

Diseases among households in the past 6 months*

Water, sanitation and hygiene (WASH)-related indicators

Shelter-related indicators

Shelter-type class

Percentage of households that do not have access to a safe source of drinking water

Percentage of households where there is visible waste or trash in the vicinity

Percentage of households where there is visible human faeces in the vicinity

With regards to WASH indicators, all respondents lived in areas with safe sources of drinking water. At the same time, 14 per cent lived in the vicinity of visible waste or trash and 16 per cent lived in the vicinity of waste or stagnant water.

Regarding shelter indicators, respondents were asked about the building materials of their accommodation in order to calculate shelter type on a scale of very low to high structural integrity, with 20 per cent found to have poor to very poor structural integrity. Among respondent accommodations, 6 per cent were shared with the respondent's employer. Additionally, 38 per cent were owned by the respondent's employer. Most respondents paid rent for their accommodations.

Among surveyed migrants in Ranong, 98 per cent had access to the electricity grid and 2 per cent used renewable energy.

Waste disposal methods*
