METHODOLOGY

The DTM Emergency Tracking Tool (ETT) is deployed to track and collect information on large and sudden population movements, provide frequent updates on the scale of displacement and quantify the affected population when needed. As a sub-component of the mobility tracking methodology in Nigeria, ETT utilizes direct observations and a broad network of key informants to capture the best estimates of the affected population per location, enabling targeted humanitarian response planning.

LIMITATIONS

The ETT figures reported are not cumulative of all the affected persons thus far but rather provide a snapshot of the current displacement situation on the date indicated. The data and information reported on this dashboard are related solely to the movements caused by the triggers on page two between 26 February – 03 March.

MALNUTRITION SCREENING SUMMARY OF THE NEW ARRIVALS (CHILDREN 6 – 59 MONTHS)

Between 26 February and 03 March 2024, an exhaustive nutrition screening using Mid-Upper Arm Circumference (MUAC) and oedema for acute malnutrition was conducted by sector partners for 149 children of 6-59 months. Of the 149 children screened, the MUAC reading indicated that 15 were recorded in the red category, 24 in the yellow category and 110 in the green category. No case of oedema was reported in the six LGAs assessed.

Among the 149 children screened, 20 arrived from neighbouring countries (1 in Gwoza, 9 in Monguno and 10 in Mobbar); of all the 20 children measured; 19 were in green, none in yellow and one was in the red category. All children found with acute malnutrition have been admitted to the treatment programme.
