

CONTEXT

With the end of the conflict with the Islamic State of Iraq and the Levant (ISIL), protracted displacement has come to characterize the post-conflict environment in Iraq. Around 1.17 million people remain internally displaced, nearly all of whom fled their areas of origin more than five years ago.¹ In light of the above, it is essential to advance durable solutions to displacement in Iraq through improving the living conditions that will enable internally displaced persons (IDPs) to voluntarily take steps towards return, local integration, or settlement in new locations. The Displacement Index (DI) is a tool designed to measure and monitor the living conditions of IDPs. Data collection for DI Round 5 took place between October and December 2022 across 18 governorates, 103 districts, and 2,662 locations of Iraq. During this round, 35 fewer locations of displacement were assessed as IDPs either returned to their areas of origin, or moved to another locations of displacement.

Figure 1. Proportion of IDPs by category of severity

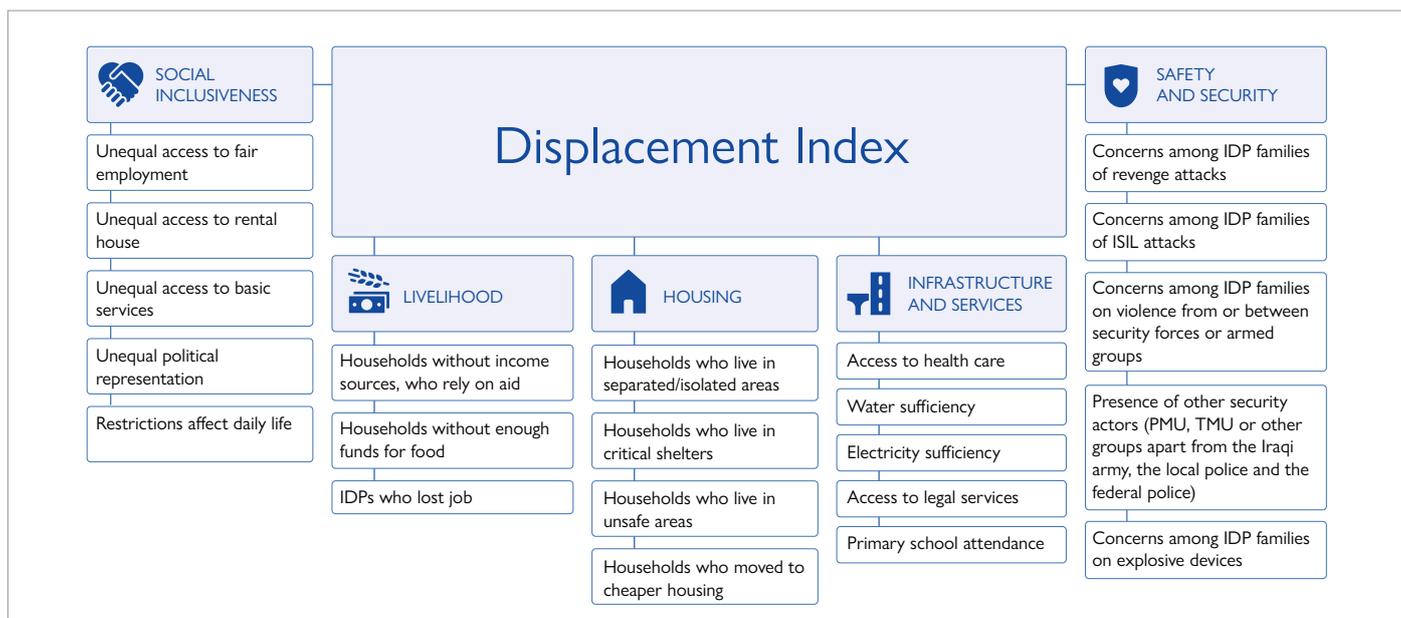

METHODOLOGY

The DI is based on 22 indicators across five domains: (1) livelihoods, (2) housing, (3) infrastructure and services, (4) safety and security, and (5) social inclusiveness. Factor analysis is used to examine the relationship between these domains and their indicators and to capture both the relevance of each indicator for a certain domain and the importance of each domain for the overall index. In line with the previous studies, (1) livelihoods and (2) housing are domains with the highest impact on the overall living conditions of IDPs. Domains with the second highest impact are (3) services and (4) security, followed by (5) social inclusiveness. The scores of each domain and overall index are grouped into three categories: low, medium, and high severity of living conditions. For more information on the methodology, please refer to the last page of this report.

Data collected: October - December 2022

Figure 2. Displacement Index domains and indicators

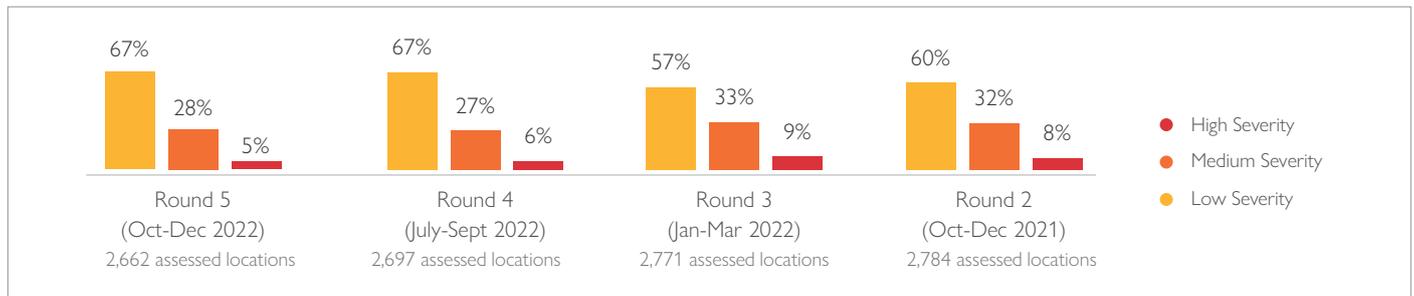

¹ IOM DTM Master List round 128, found that 97% of IDPs are protracted displacement (more than three year) and 92% have been displaced for more than 5 years. More information is available from: <https://iraqdtm.iom.int/MasterList>

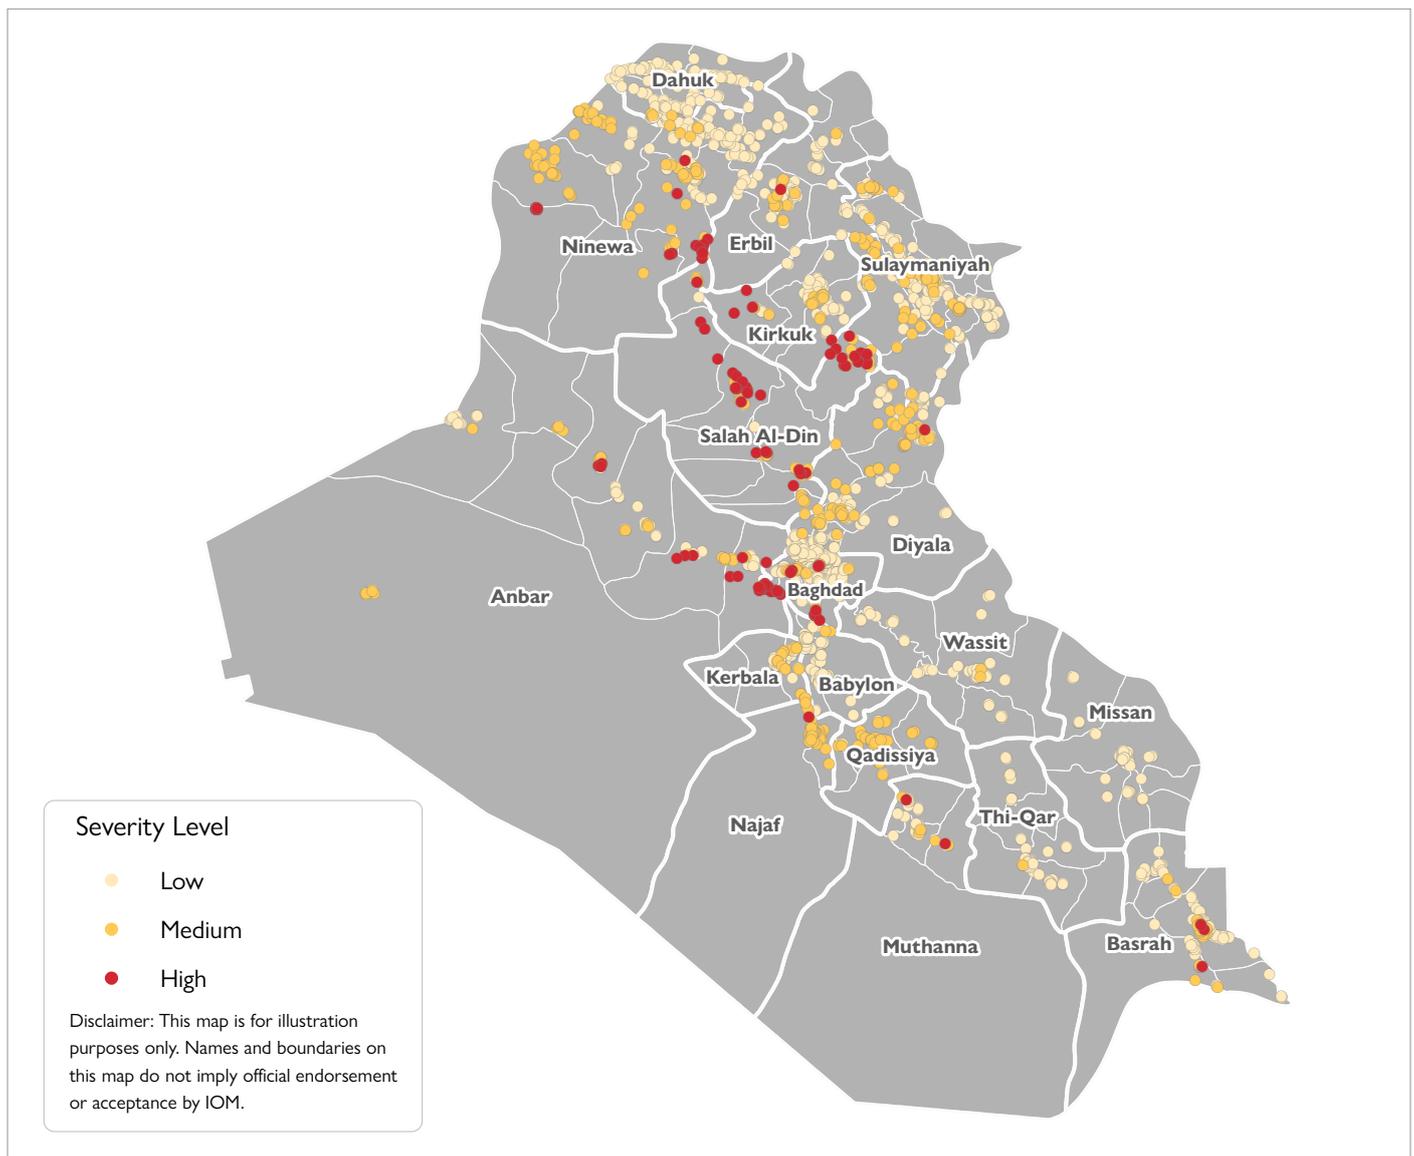

OVERALL SEVERITY

- Out of the 2,662 locations assessed in Round 5, 104 locations present severe conditions. These locations host five per cent of the IDP population, or 53,826 individuals. A further 548 locations are classified as medium severity and host 28 per cent of the IDP population (270,276 individuals) and 2,010 locations show low severity conditions with 67 per cent of the IDP population (655,524 individuals).
- A decrease of 4,782 IDPs living in severe conditions has been observed since the previous round in July – September 2022, when 6 per cent of the IDP population (58,608 individuals) were living in severe conditions.
- Anbar, Salah al-Din, and Ninewa are the governorates hosting the highest number of IDPs living in severe conditions, with 17,778 individuals, 16,248 and 10,674 respectively.

Figure 3: Proportion of IDPs by category of severity per rounds

Map 1: IDP locations by category of severity

Between Round 4 (July – September 2022) and Round 5 (October-December 2022), the largest decrease in the number of IDPs in severe condition was recorded in Salah al-Din (-4,236 individuals), followed by Baghdad (-1,386).

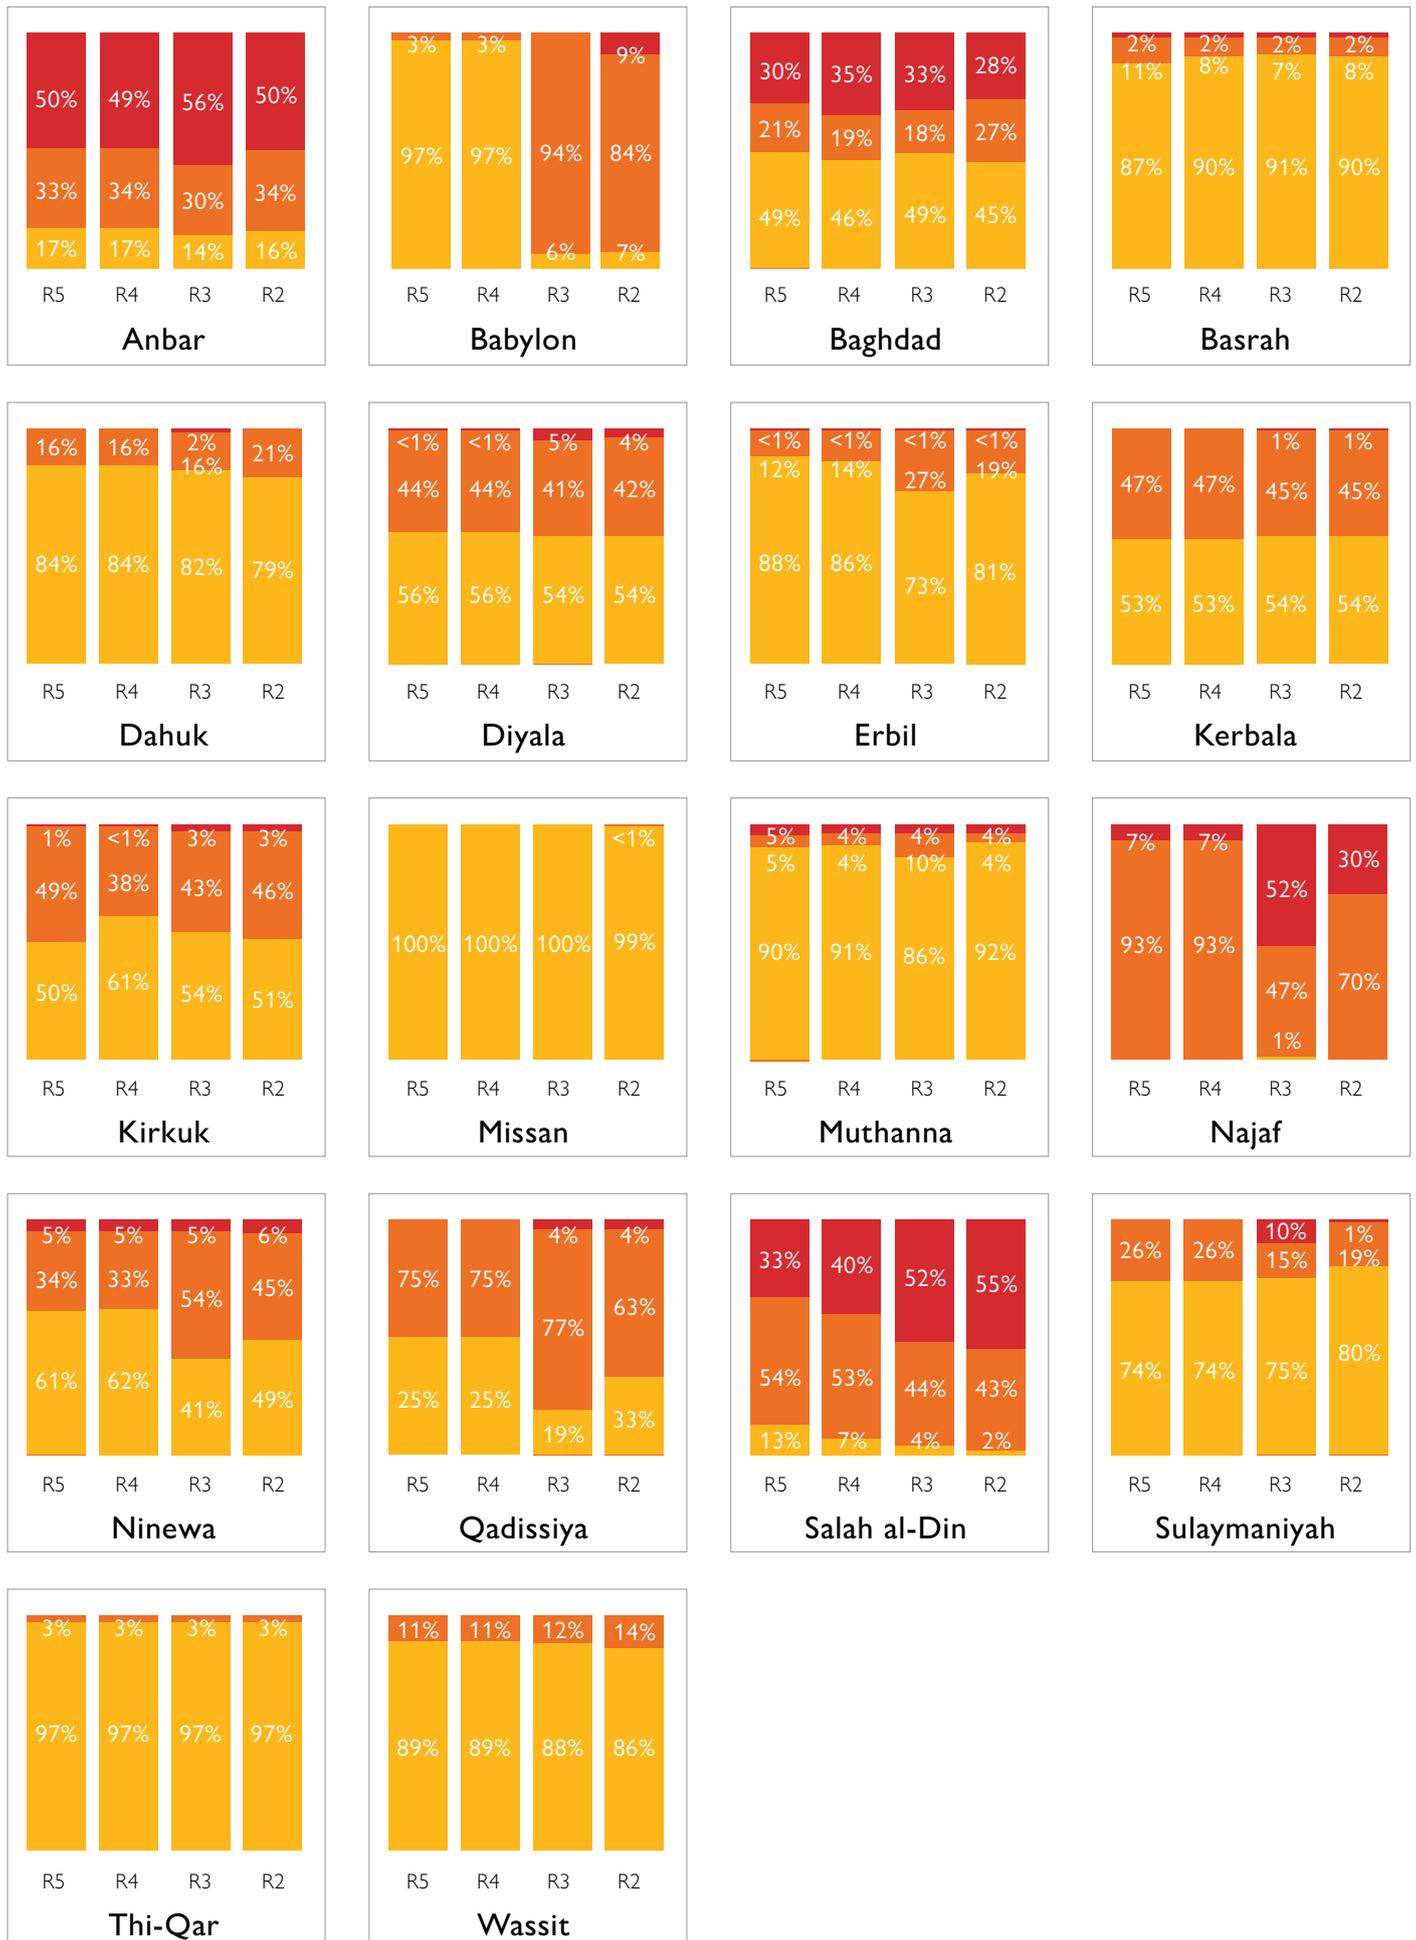

The decrease in Salah al-Din was notably observed in Tikrit district, due to the improvements of infrastructure and services domain, across water sufficiency and electricity sufficiency indicators.

The reduction in Baghdad was recorded across Mahmoudiya, Tarmia, and Abu Ghraib districts, which was driven by the improvement in the infrastructure and services domain, across water sufficiency and electricity sufficiency indicators. In addition, the improvement in the livelihood domain, mainly due to the improvement in the employment and financial situation of IDP households.

Table 1: Number of IDPs and locations per governorate by category of severity

	High		Medium		Low		TOTAL	
	No. of IDPs	No. of locations	No. of IDPs	No. of locations	No. of IDPs	No. of locations	No. of IDPs	No. of locations
Anbar	17,778	28	11,544	37	6,114	55	35,436	120
Babylon			492	2	15,744	86	16,236	88
Baghdad	7,860	9	5,652	39	12,978	355	26,490	403
Basrah	102	3	540	24	4,500	159	5,142	186
Dahuk			21,654	3	115,902	154	137,556	157
Diyala	18	1	19,284	61	24,582	121	43,884	183
Erbil	84	1	25,356	15	193,326	142	218,766	158
Kerbala			4,992	15	5,586	73	10,578	88
Kirkuk	516	3	44,940	19	47,154	58	92,610	80
Missan					1,746	73	1,746	73
Muthanna	36	2	42	5	720	40	798	47
Najaf	510	1	7,194	50			7,704	51
Ninewa	10,674	19	66,558	84	119,154	171	196,386	274
Qadissiya			2,112	40	690	16	2,802	56
Salah al-Din	16,248	37	26,688	50	6,426	27	49,362	114
Sulaymaniyah			32,676	101	94,422	338	127,098	439
Thi-Qar			96	1	2,664	68	2,760	69
Wassit			456	2	3,816	74	4,272	76
Total	53,826	104	270,276	548	655,524	2,010	979,626	2,662

Figure 4: Proportion of IDPs per category of severity by governorate of displacement per rounds

HOTSPOTS

Subdistricts are classified as 'hotspots' if they score highly in terms of overall severity and have at least 1,000 IDPs residing in the subdistrict. Starting from this round, the list also includes subdistricts with medium overall severity and high score at least on one of the five domains. By applying mentioned methodological adjustment, more hotspots are identified in this round.

Eleven hotspots were identified across five governorates. The top three

hotspots based on the highest number of IDP residents are **Markaz Sinjar** in Ninewa, **Markaz Tuz Khurmatu** in Salah al-Din, and **Al-Amiryia** in Anbar governorate.

Table 2: Hotspots of severity in Round 5

GOVERNORATE	DISTRICT	SUBDISTRICT	NO. OF LOCATIONS	NO. OF IDPS
Anbar	Falluja	Al-Amiryia	21	15,636
Anbar	Falluja	Markaz Falluja	6	1,704
Baghdad	Abu Ghraib	Markaz Abu Ghraib	19	3,576
Baghdad	Mahmoudiya	Al-Latifya	9	6,498
Najaf	Kufa	Markaz Al-Kufa	18	1,566
Najaf	Najaf	Al-Haydariya	7	2,322
Najaf	Najaf	Markaz Al-Najaf	22	2,910
Ninewa	Al-Ba'aj	Markaz Al-Ba'aj	9	7,458
Ninewa	Mosul	Al-Qayara	12	2,508
Ninewa	Sinjar	Markaz Sinjar	15	18,468
Salah al-Din	Tuz Khurmatu	Markaz Tuz Khurmatu	13	15,834

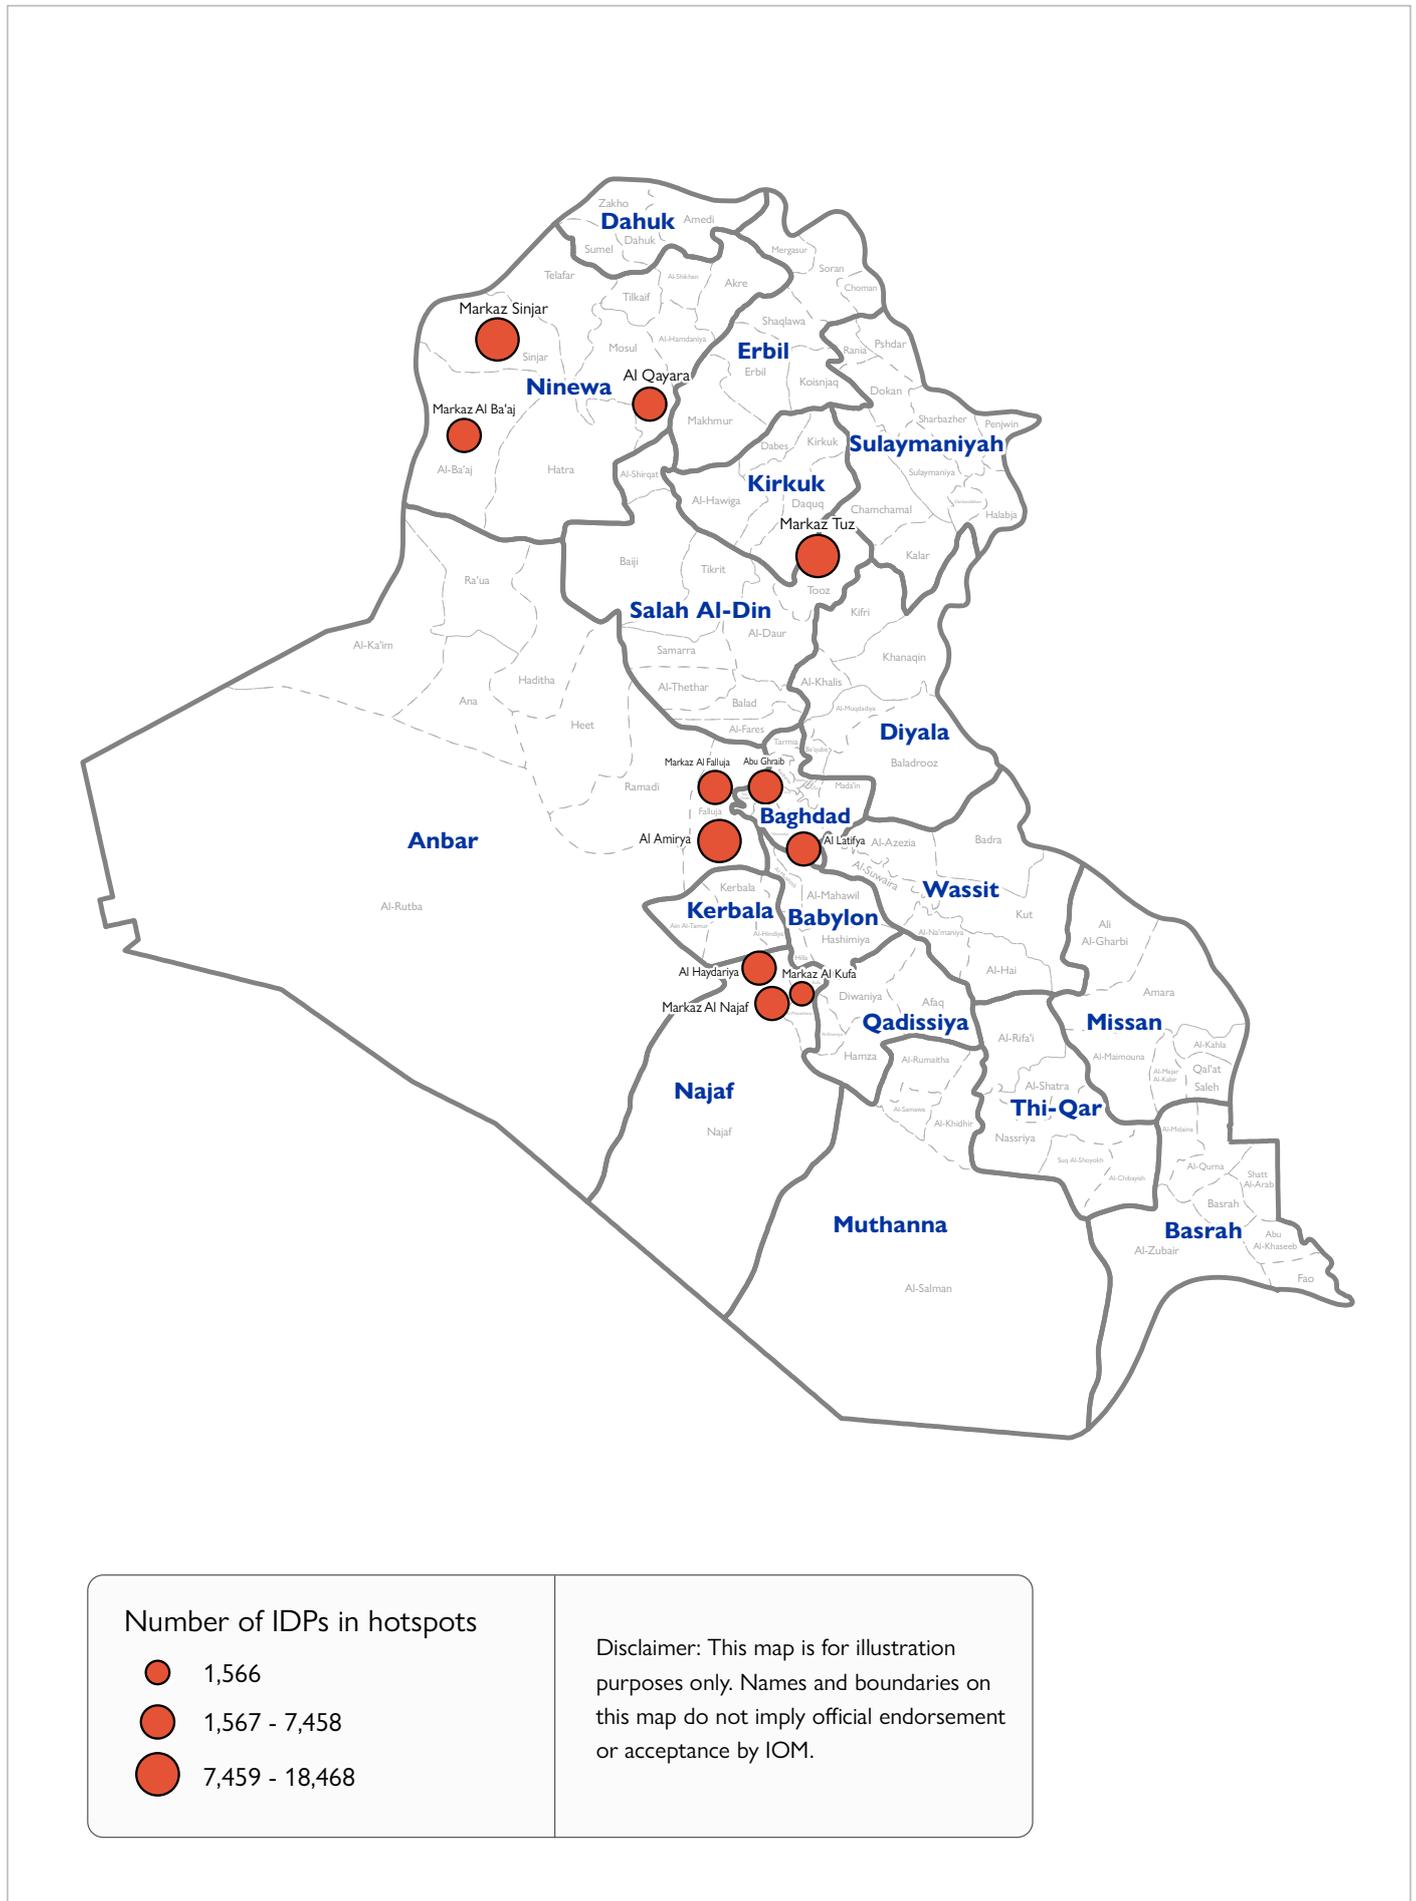

Markaz Sinjar has 18,468 IDPs settled in the subdistrict living in 15 locations. The most critical domain is safety and security, with all locations showing high concerns among IDPs on violence from or caused by a tension among security forces or armed groups. In addition, two thirds of assessed locations (10 locations) show high concerns among IDP families on ISIL attacks.

Markaz Tuz Khurmatu has 15,834 IDPs settled in the subdistrict. Out of the 13 assessed locations in the subdistrict, 6 locations show high severity conditions, while 7 locations show medium severity conditions. The most critical domain in the subdistrict is livelihood, due to many of IDP households not having enough resources for food or other basic needs, can't afford rent, and relying on aid/assistance. All

assessed locations show high concerns among IDPs on ISIL attack with frequent cases of discrimination or unfair treatment due to IDP status when it comes to political representation.

Al-Amiryia has 15,636 IDPs settled in the subdistrict. Out of the 21 locations assessed, 19 show severe conditions. The most critical domain is livelihood, with 18 locations showing severe conditions due to many IDP households not having enough resources for food or other basic needs and relying on aid/assistance. The second critical domain is infrastructure and services, with legal services being unavailable in 12 locations. Thirdly, the housing domain shows high severity due to a large number of IDPs living in critical shelters.

Map 2: Hotspots of severity

METHODOLOGY

The Displacement Index (DI) is a tool designed to measure and monitor the living conditions of IDPs. Data collection for the DI takes place across 18 governorates, around 100 districts and 2,700 locations of displacement in Iraq. The unit of the analysis is the location, which can be a town, village or neighbourhood in a city. Data is collected through IOM's Rapid Assessment and Response Teams (RARTs), composed of over 80 staff members deployed across Iraq (20% of enumerators are female). IOM's RARTs collect data through structured interviews with key informants (KIs) using a large, well-established network of over 2,000 KIs (5% are female) that includes community leaders, mukhtars, local authorities and security forces.

The data of the DI is collected through KI interviews in each location with IDPs. This methodology has the advantage of allowing extensive coverage over a short period of time but relies on few individuals conveying the views of a large and mixed community, which might lead to limited representation for smaller groups with distinct characteristics, anomalies in the data due to misinterpretation of the question by the KI, or discrepancies caused by a biased perception of the situation, particularly with regard to the domain of social inclusiveness.

The DI is based on 22 indicators across five domains: (1) livelihoods, (2) housing, (3) infrastructure and services, (4) safety and security, and (5) social inclusiveness. The indicators were selected upon consultation with stakeholders, descriptive and exploratory

statistical analysis using DTM datasets, including Integrated Location Assessments and Master Lists, and pilot rounds of data collection. Confirmatory factor analysis was used to examine the relationship between these observed indicators and their domains and to capture both the relevance of each indicator for a certain domain and the importance of each domain for the overall index. In line with the previous studies, (1) livelihoods and (2) housing are domains with the highest impact on the overall living conditions of IDPs. Domains with the second highest impact are (3) services and (4) security, followed by (5) social inclusiveness.

After Round 1 of the DI, collected between March-April 2021, changes to the methodology were implemented to improve the overall quality of the index. As a result, the findings for Round 1 are not comparable to the subsequent rounds.

Starting in Round 5 (October–December 2022) adjustment of weighting to each domain and indicator on subdistrict level is implemented to take into account both the severity and number of IDPs residing in the area. In addition, the list of hotspots also includes subdistricts with medium overall severity and high score at least on one of the five domains.

For more details on the overall approach, indicators, statistical model and score calculation, please refer to the “[Methodological Overview](#)” on the DTM website.
