TABLE OF CONTENTS

KEY FINDINGS

This summary presents findings of the 20th round of Mobility Tracking Assessments (previously known as Baseline Assessments) conducted across Northern, Central and Southern Mozambique through key-informant and group interviews at location level between November and December 2023. Mobility Tracking assessments provides a geographical overview of demographic and mobility profiles of internally displaced persons (IDPs) and returnees across Mozambique. During this round, IOM DTM mapped a total of 709,529 IDPs and 632,408 returnees in 364 locations. Cabo Delgado hosts 76 per cent of the overall IDP figure followed by Sofala (11%). Estimated 55 per cent of the total IDPs were identified in host communities whilst 45 per cent are living in displacement sites. Conflict was the major trigger of displacements in Northern Mozambique whereas most of the displacements in Central Mozambique were triggered by disasters due to natural hazards. The total figure of IDPs decreased by 17 per cent comparing to the previous round. However, the analysis suggests that this decrease does not directly correlate with an increased rate of returnee. In Round 20, there was an 11 per cent increase in returnees, this follow significant household-level verification efforts to ensure best estimates.

Noting that a significant number of IDPs in the region may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessments estimate 113,524² individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

PERCENTAGE DECREASE IN IDPs SINCE AUG 2023

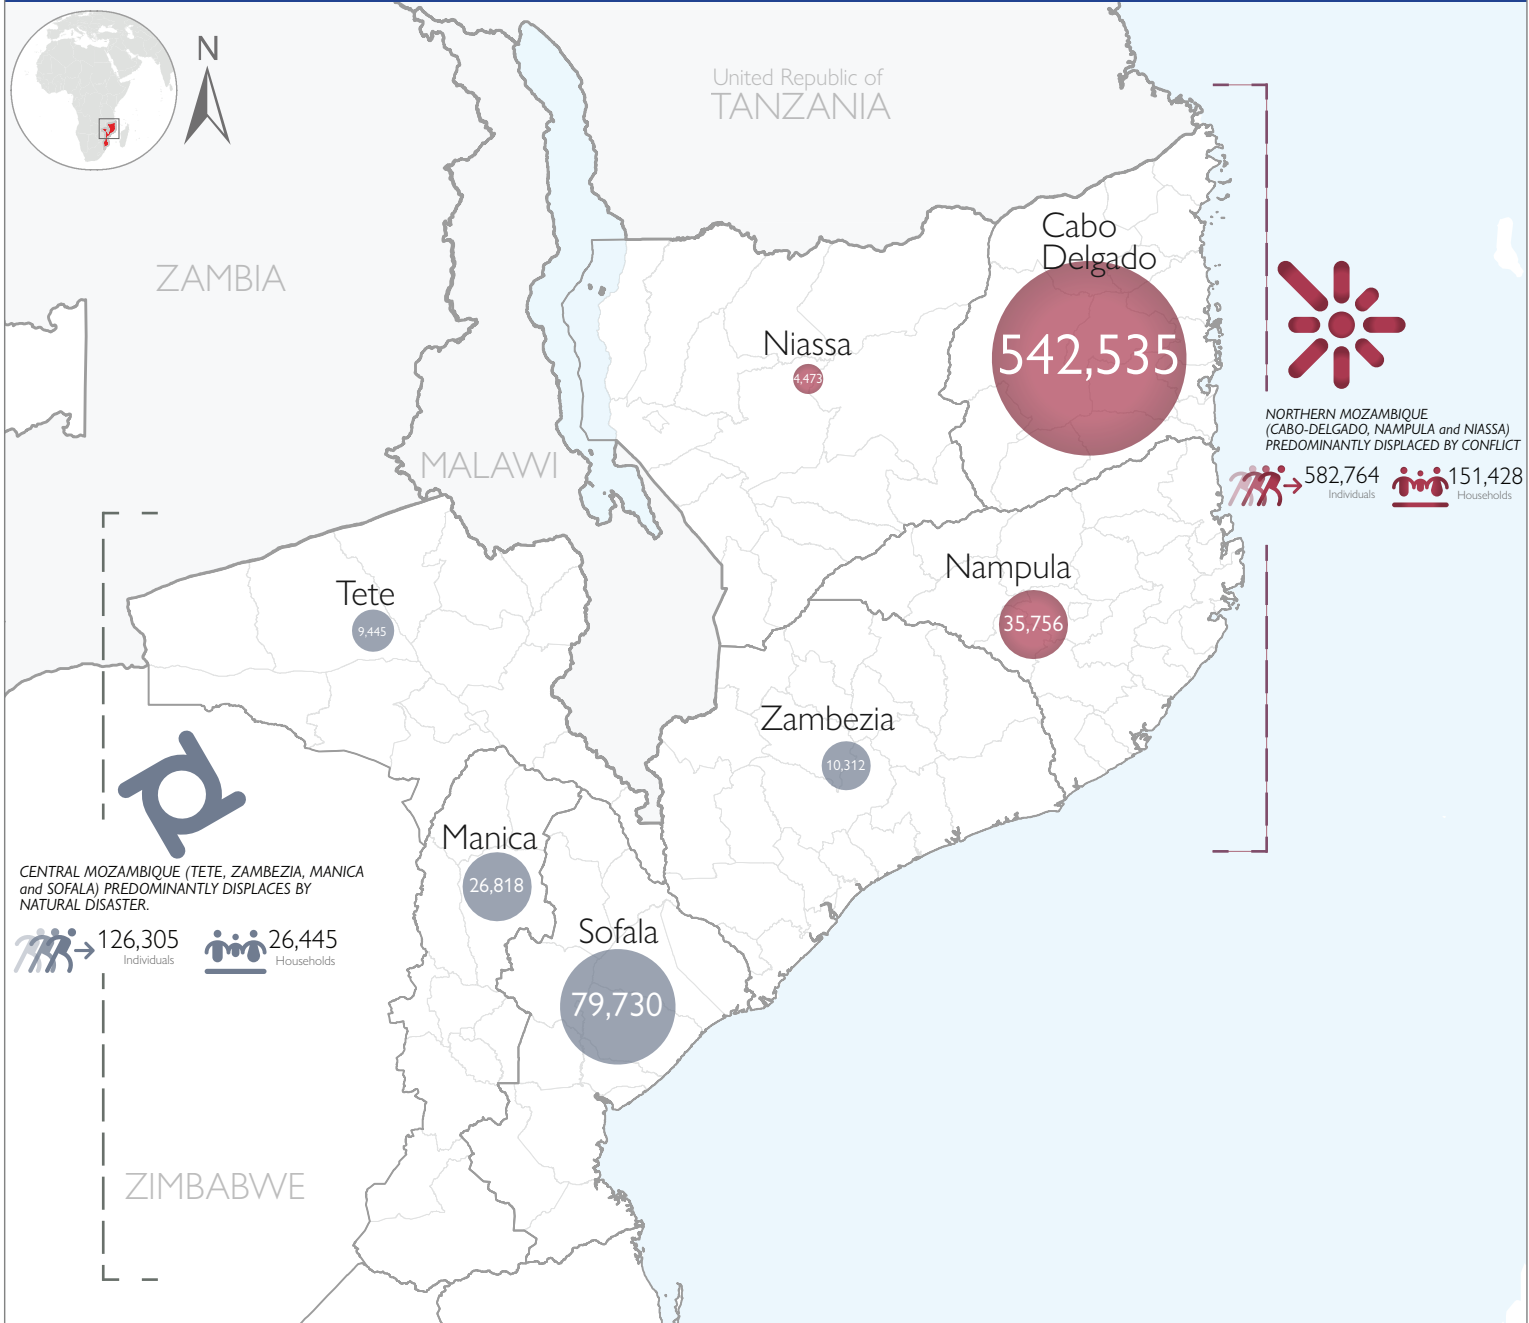

17%

Decrease in the number of displaced individuals from August 2023 (Round 19) in Mozambique.

²Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022).

Please note: There were no returnees reported in areas marked N/A

Noting that a significant number of Returnees in the region may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessment estimate 101,185³ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

INTERNALLY DISPLACED PERSONS

Persons who have been forced or obliged to flee or to leave their homes or places of habitual residence because of armed conflict, situations of generalized violence, violations of human rights or natural or human made disasters and who have not crossed an internationally recognized State border. For the purposes of Mobility Tracking, the presence of IDPs can also be sub-categorized into individuals identified who are present in their district of origin. IDPs in Mozambique are located in host community and displacement site settings.

DEFINITIONS OF INTERNALLY DISPLACED PERSONS AND RETURNEES

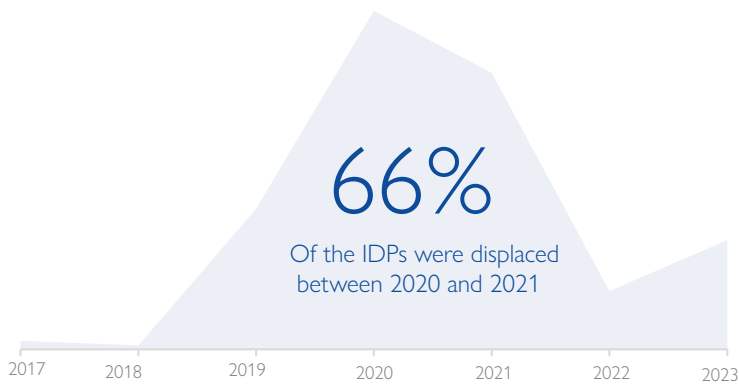

RETURNEES

Persons who have returned from displacement areas to their community of origin or former habitual residence, spontaneously or in an organised fashion, with the intention of remaining there permanently and who is yet to be fully integrated. For the purposes of Mobility Tracking, the presence of Returnees is identified by individuals who are present in location of origin/habitual residence. Multi-sectoral needs and the sustainability of return requires further assessment.

³Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT TREND IN NORTHERN MOZAMBIQUE

DISPLACEMENT AND RETURN IN CABO DELGADO

A total of 542,535 IDPs were identified across 16 districts in Cabo Delgado. While a net decrease of IDPs was observed in the province compared to previous round, most of the IDPs face long-term displacement (67% displaced more than twice), triggered by conflict, as majority have been displaced since 2019. Mobility Tracking teams recorded an estimated presence of 141,877 IDPs present in their district of origin (representing an estimate 26 per cent of all IDPs in Cabo Delgado). All IDPs across Balama, Chiure, Cidade de Pemba, Ibo Mecufi, Metuge, Montepuez and Namuno have been displaced from outside their places of origin, with the majority being displaced from Mocimba Da Praia, Macomia, Quissanga, Muidumbe and Ancuabe. Approximately 60 per cent (325,946) of all IDPs in the province are hosted in urban/peri-urban settings whereas 40 per cent are residing in rural settings. Financial support was recorded as the highest humanitarian need in the province, followed by fources of income and food.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs and returnees in the province may face diverse disabilities ranging from physical, cognitive, sensory to psychological impairments, mobility tracking assessment estimate 86,806⁴ individuals who could potentially have a disability.

ESTIMATED NUMBER OF IDPs PRESENT IN THEIR DISTRICTS OF ORIGIN

26% (114,877)

Of the IDPs are displaced within their respective districts of origin.

ESTIMATED NUMBER OF IDPs IN THE DISTRICT SEDES (PERI-/URBAN)

60% (325,946)

Of the IDPs are currently living within the district sedes.

⁴Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

REPORTED PRIORITY NEEDS OF IDPs IN CABO DELGADO

To address the priority needs of IDPs, Key Informants were asked to rank the relative intensity of each sectoral need on a Likert scale. The following graph presents this data, by aggregating the data for all assessed localities in Cabo Delgado and presenting an average “need” between 0 (not applicable) to 5 (very significant). For the sectoral needs of individual localities, please consult the Mobility Tracking Dataset (Round 20).

IDPs LIVING IN HOST COMMUNITIES AND DISPLACEMENT SITES

An estimated 157,680 households with 601,866 returnees were additionally identified in the districts of Cabo Delgado during this data collection round. This represents an increase of 11 per cent comparing to 540,958 returnees reported in previous Mobility Tracking Assessments (August 2023). The highest number of returnees recorded during this data collection round were identified in Mocimboa da Praia (181,781) followed by Palma (121,177) and Mueda (69,155). Overall, 24 per cent of the returnee population are adult men, 31 per cent adult women, whilst 45 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) to secure land and cultivate crops at place of origin and b.) place of origin is safe now; and c.) better living conditions at place of origin than in the current place.

MAIN REASONS OF RETURN IN CABO DELGADO

Please note: multiple responses were possible for this question.

DISPLACEMENT AND RETURN IN NAMPULA PROVINCE

In Nampula, 35,756 IDPs were identified across 20 districts and all the IDPs are displaced outside their districts of origin. All IDPs in Nampula were displaced due to conflict/violence. Overall, 94 per cent have been displaced more than once and 85 per cent of the net figure were displaced during 2020. Approximately 83 per cent of all IDPs in the region are hosted in urban/peri-urban whereas 17 per cent living in rural settings. Cidade de Nampula (13,816 IDPs) and Meconta (11,213 IDPs) hosts 70 per cent of the IDPs in Nampula province. All IDPs in Nampula were displaced from Cabo Delgado province and most of them were displaced from the district of Mocimboa da Praia. Sources of income was recorded as the highest humanitarian need in the province, followed by financial support and non-food items.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the region may face diverse disabilities, mobility tracking assessment estimate 5,721⁵ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

ESTIMATED NUMBER OF IDPs PRESENT IN THEIR DISTRICT OF ORIGIN

NONE

Of the IDPs are displaced within their respective districts of origin.

ESTIMATED NUMBER OF IDPs IN THE DISTRICT SEDES (PERI-/URBAN)

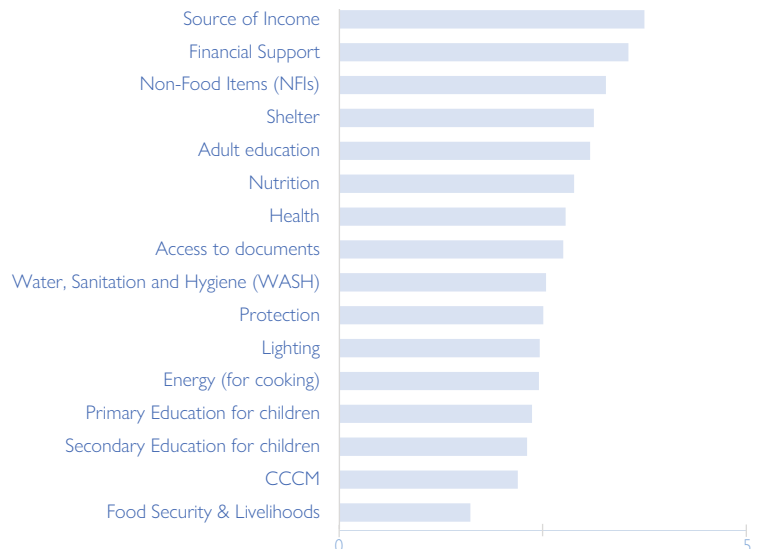

83% (29,747)

Of the IDPs are living within the district sedes.

LOCATION TYPE

PRIORITY NEEDS

⁵Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

An estimated 29,056 returnees were recorded in Nampula province during this data collection round. This represents 18 per cent increase comparing with 24,575 returnees reported in previous Mobility Tracking assessment (August 2023). Consistent with return trends observed between April – July 2023, the returnees recorded during this data collection round were identified in Erati district (15,299) and Memba district (13,757). Overall, 15 per cent of the returnee population are adult men, 25 per cent adult female, and 60 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) place of origin is safe now; b.) re-unite with family. and c.) taking care of belongings.

RETURNEES - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of returnees in the province may face diverse disabilities, mobility tracking assessment estimate 4,649⁶ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

MAIN REASONS OF RETURN IN NAMPULA

Please note: multiple responses were possible for this question.

⁶Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT AND RETURN IN NIASSA PROVINCE

In Niassa, 4,473 IDPs were identified across 16 districts, almost similar to the previous round of data collected in which 4,710 IDPs were recorded. Whilst conflict is the major cause of displacement, some of the IDPs in Cuamba and Lago face protracted displacement, triggered by disasters due to natural hazards, and are displaced within their respective districts. Overall, 81 per cent of the IDPs faced protracted displacement more than once, due to conflict, and 53 per cent were displaced in 2022. Approximately, 81 per cent of all IDPs in the region are hosted in urban/peri-urban whereas 19 per cent are living in rural settings. Nutrition was recorded as the highest humanitarian need in the region, followed by source of income and non-food items.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the region may face diverse disabilities, mobility tracking assessment estimate 7167 individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

ESTIMATED NUMBER OF IDPs PRESENT IN THEIR DISTRICT OF ORIGIN

39% (1,744)

Of the IDPs are displaced within their respective districts of origin.

LOCATION TYPE

44%
1,947

Individuals living in 7 displacement sites

PRIORITY NEEDS

⁷Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022).

An estimated 306 returnees have been identified in the Niassa province during this data collection round. All the returnees recorded during this data collection round were identified in Mecula district. Overall, 20 per cent of the returnee population are adult men, 26 per cent adult women, and 54 per cent are children. Ninety-two per cent of the returnees arrived in their places of origin between January and May 2022 whilst eight per cent returned between September and December 2023. Indicative group interviews with Key Informants additionally reported the reasons of return to include a.) place of origin is safe now; b.) re-unite with family; c.) Secure land and cultivate crops; and d.) taking care of belongings.

RETURNEES - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of returnees in the province may face diverse disabilities, mobility tracking assessment estimate 49⁹ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

MAIN REASONS OF RETURN IN NIASSA

Please note: multiple responses were possible for this question.

⁹Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

displaced more than three times.

DISPLACEMENT DYNAMICS IN SOFALA PROVINCE

Overall, 79,730 IDPs were identified across five(5) districts in Sofala province. Buzi district hosts 58 per cent (45,938) of the IDPs within 18 displacement sites. Compared to the previous Mobility tracking round, there has been a 34 per cent decrease in the IDP net figure. The decrease can be attributed to IDPs returning to their places of origin to access land to cultivate crops. Thirty four per cent of the IDPs have been displaced atleast twice and 69 per cent have been displaced in 2019 due to disasters caused by natural hazards. Approximately 55 per cent of all IDPs in the province are hosted in urban/peri-urban whereas 45 per cent reside in rural settings. Energy for lighting was recorded as the highest humanitarian need in the region, followed by shelter and sources of income.

Of the IDPs are displaced within their respective districts of origin.

ESTIMATED NUMBER OF IDPs LIVING IN DISPLACEMENT SITES

100%
(79,730)

Individuals living in 35 displacement sites.

PRIORITY NEEDS

¹⁰Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT DYNAMICS IN MANICA PROVINCE

In Manica, 26,818 IDPs were identified across 35 sites in Sussundega, Gondola and Cidade de Chimoio districts. Sussundenga district hosts 95 per cent of the IDPs followed by Gondola (4%). The net figure represents a nine per cent (9%) decrease compared to the previous round. Whilst all the IDPs have been displaced once due to disasters, 86 per cent were displaced in 2019, 13 per cent were displaced in 2020 and 4 per cent were displaced in 2021. Majority of the displacements were caused by disasters due to natural hazards. Approximately, 3 per cent of IDPs in the region are hosted in Urban/Peri-urban with 97 per cent living in rural settings. Energy for lighting was recorded as the highest humanitarian need in the region, followed by financial support and nutrition.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the province may face diverse disabilities, mobility tracking assessment estimate 4,291¹⁴ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

ESTIMATED NUMBER OF IDPs PRESENT IN THEIR DISTRICT OF ORIGIN

99% (26,501)

Of the IDPs are displaced within their respective districts of origin.

ESTIMATED NUMBER OF IDPs IN THE DISTRICT SEDES (PERI-/URBAN)

3% (731)

Of the IDPs are living within the district sedes.

ESTIMATED NUMBER OF IDPs LIVING IN DISPLACEMENT SITES

100% (26,818)

Individuals living in 35 displacement sites.

PRIORITY NEEDS

¹⁴Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022).

DISPLACEMENT DYNAMICS IN ZAMBEZIA PROVINCE

A total of 10,312 IDPs were identified across seven (7) districts in Zambezia, of which 80 per cent are displaced within their districts of origin. Namacurra district hosts 50 per cent of the IDPs recorded in Zambezia, followed by Maganja da Costa (23%). Disasters due to natural hazards were the major causes of displacement in Zambezia, however, some of the IDPs have been displaced due to conflict from Cabo Delgado. Almost all of the IDPs in Zambezia faced displacement once and 42 per cent have been in displacement since 2019. Approximately 15 per cent of all IDPs in the region are hosted in urban/peri-urban whereas 85 per cent are living in rural settings. Financial support was recorded as the highest humanitarian need in the region, followed by source of income and lighting.

DISPLACEMENT AND RETURN IN TETE PROVINCE

A total of 1,869 households with 9,445 IDPs were identified across two (2) districts in Tete, representing a six per cent (6%) increase from the previous round of data collection. All the IDPs are residing within their districts of origin. Twenty-one per cent of the IDPs faced displacement more than three times and 88 per cent have been in displacement since 2019. Approximately, 64 per cent of all IDPs in the region are hosted in urban/peri-urban whereas 36 per cent live in rural settings. Financial support was recorded as the highest humanitarian need in the region, followed by energy for lighting and health.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

41%
Women
(3,876)

29%
Men
(2,717)

30%

Of the IDPs are living within the district sedes.

LOCATION TYPE

12%
(1,180)

Individuals living in the host communities.

88%
(8,265)

Individuals living in 3 displacement sites.

PRIORITY NEEDS

¹²Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

An estimated 235 households with 1,180 returnees have been identified in Tete province during this data collection round. All the returnees recorded during this data collection round were identified in Mutarara district. Overall, 20 per cent of the returnee population are adult men, 38 per cent adult women, and 42 per cent are children. Indicative group interviews with Key Informants additionally reported the reasons of return include a.) place of origin is safe now; b.) better living conditions than in the current place; and c.) taking care of belongings.

RETURNEES - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of returnees in the province may face diverse disabilities, mobility tracking assessment estimate 188¹¹ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

PERIOD OF RETURN

returned between May and August 2023

MAIN REASONS OF RETURN IN TETE

Please note: multiple responses were possible for this question.

¹¹Disability prevalence (16%) is calculated as the number of persons with disabilities divided by the total returnee or IDP population. For more see WHO Global report on Health Enquiry for Persons with Disabilities (2022)

DISPLACEMENT DYNAMICS IN INHAMBANE PROVINCE

In Inhambane, a total of 114 households with 460 IDPs were identified across two displacement sites in Cidade de Inhambane (432) and Inharrime (28). IDPs recorded in Cidade de Inhambane were displaced from within the district due to Tropical Storm Freddy in 2023 whereas all IDPs in Inharrime were displaced from Cabo Delgado in 2020 due to conflict. Financial support was recorded as the highest humanitarian need in the region, followed by lighting and food.

IDPs - SEX, AGE, DISAGGREGATED AND DISABILITY DATA (SADDD)

Noting that a significant number of IDPs in the province may face diverse disabilities, mobility tracking assessment estimate 74¹³ individuals who could potentially have a disability. Persons with disabilities are disproportionately affected by disaster and conflict, underscoring the imperative for disability-inclusive interventions and policies to address the distinctive requirements and difficulties experienced by this vulnerable population.

METHODOLOGY

The data in this report is collected through DTM's Mobility Tracking Tool. Mobility Tracking gathers data through key informants at both district and community level on a quarterly data collection cycle and includes a Multi-Sectoral Location Assessment (MSLA) component that gathers multisectoral data at Displacement Site level. A comprehensive methodological note on DTM's Mobility Tracking component is available on the DTM Mozambique website. During Round 20, DTM assessed 364 communities in Northern, Central and Southern regions of Mozambique. A total of 411 key informant interviews (KIIs) were conducted during this round. Seventy four per cent (74%) of the key informants were males whilst 26 per cent were female. Of the Key Informants, ninety five per cent were with representatives from various divisions of district and local governments and five per cent were from civil society organizations/non-government agencies and other humanitarian partners. Ninety eight per cent of locations were assessed physically (enumerators within radius of 1Km from the affected location). Approximately two per cent of locations were assessed remotely (owing to access or security constraints).

To address the priority needs of IDPs, Key Informants have been asked to rank the relative intensity of each sectoral need on a Likert scale. The priority needs graphs presents this data, by aggregating the data for assessed localities in respective districts and presenting an average "need" between 0 (not applicable) to 5 (very significant).

For the sectoral needs of individual localities, please consult the Mobility Tracking Dataset (Round 20).

LIMITATIONS AND CHALLENGES:

The DTM's methodology of Mobility Tracking generates best estimates of IDPs as per their locations of displacement through key informant (KI) interviews, headcounts conducted in select Displacement Sites as well as verified data through IDP registration where available. However, disaggregated figures of IDP and Returnee populations has limitations. Within the returnee population categories assessed, assessment on intentions, perceptions, access to services/livehoods and the sustainability of return requires further assessment. Despite the observed presence of returns in newly accessible locations, mobility of displaced populations remains dynamic between host communities and sites. Humanitarian needs in access to livelihood/food, health, shelter, non-food items, education as well as water, sanitation and hygiene remain relevant amongst assessed IDP and returnee populations. Where IDP estimates increase/decrease over 25% from a previous Mobility Tracking Assessment round, verification is made through DTM Methodologies (Population Count exercises in Displacement Site Settings and additional household-level verification for IDPs in Host-community settings).

On some occasions demographic percentages are slightly below or above 100 per cent due to rounding in calculations.

ABOUT DISPLACEMENT TRACKING MATRIX

DTM has implemented the Mobility Tracking Assessments in Mozambique since 2020 to track mobility, provide information on displaced population estimates, locations and geographic distribution of displaced and returned populations, reasons for displacement, places of origin and periods of displacement. Data is collected at the settlement level, through Key Informants and focus group discussions with community focal points and direct observations. Vulnerabilities and multi-sectoral needs are covered in the Multi-Sectoral Location Assessment report (MSLA), released in conjunction with this report.
