# TRENDS & KEY STATS

## NUMBER OF MIGRANTS IN LIBYA

The number of migrants in Libya has been increasing since September 2023 and stands at its highest since DTM started operating in Libya. Previously, the number of migrants in Libya had declined as a result of the COVID-19 pandemic and its socioeconomic impact.

Number of migrants in Libya 2020 - 2024

Height of the COVID-19 pandemic including mobility restrictions and peak migrant unemployment rate in Libya.

## EMPLOYMENT

The unemployment rate among migrants in Libya has been stable since the last quarter of 2023 at 16 per cent boosted, by an economy qualified as resilient and that is forecasted to continue growing in 2024.

Half of employed migrants reported being contracted on a short-term or casual basis (e.g. very short term or on an occasional and intermittent basis).

Migrant unemployment rate in Libya 2020 - 2024

Economic growth rebounds in 2021 following the acceleration of oil production.

Period characterised by low and volatile economic growth, rising food, housing and electricity prices.

## REMITTANCES

For the past two years, around half of migrants have been consistently reporting that their remittances have been their household's primary source of revenue. This trend hints at the increased needs of migrants' family in the receiving countries likely related to the recent surge in food prices and inflation.

Percentage of migrants for whom the money they send home is their household's primary source of revenue 2020 - 2024
