

Overview of affected population – April 2024

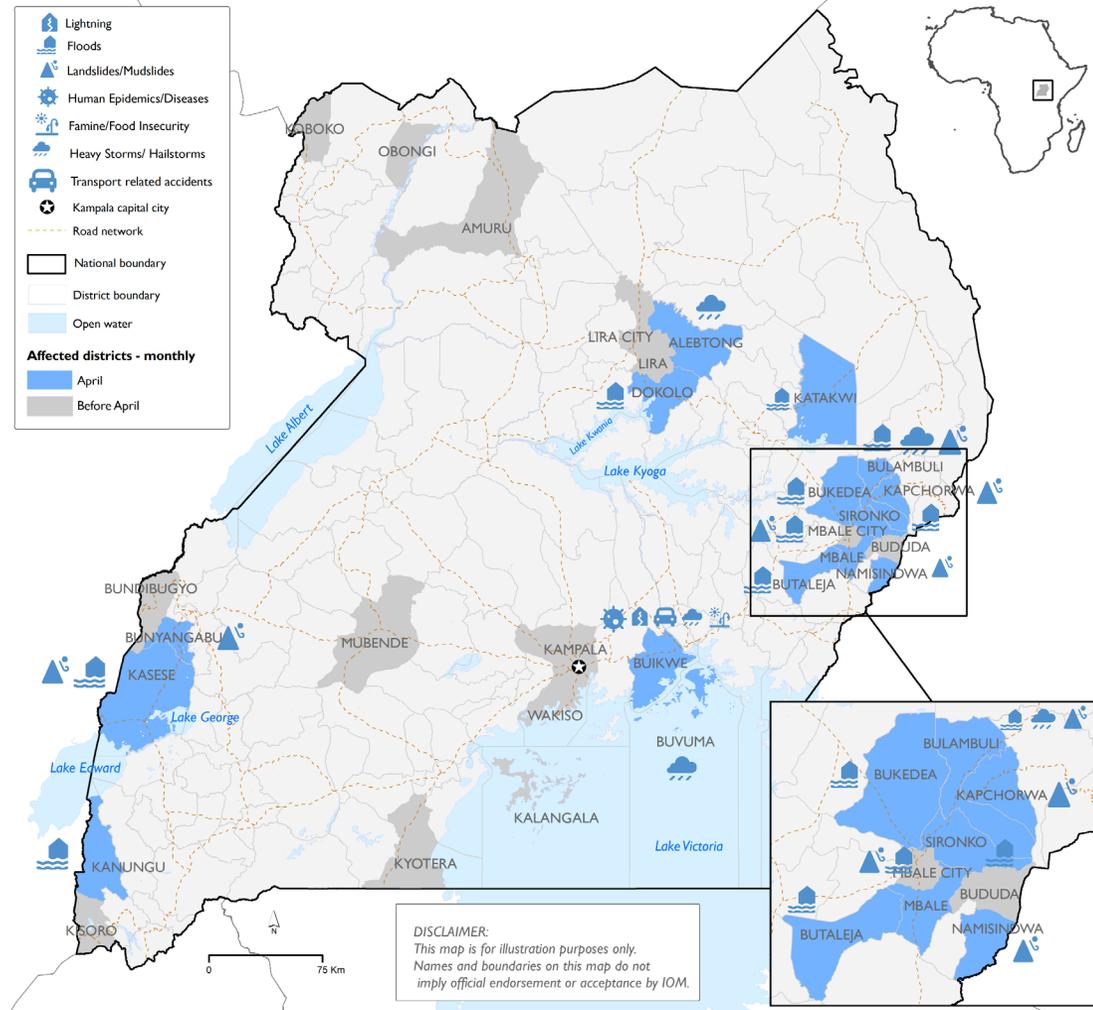

Note: The percentages presented are based on the disaggregated data provided

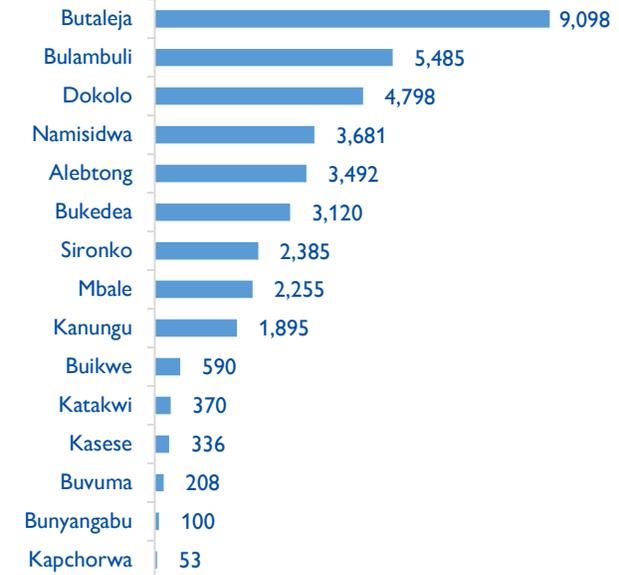

April 2024 observations

- April marked the mid of the first rainy season in Uganda and this triggered natural hazards like landslides/Mudslides in the Elgon and Rwenzori mountain ranges, floods, heavy storms and lightning. Other reported hazards include Human epidemics and disease outbreaks, famine/food insecurity and transport related accidents.
- The hazards affected 37,866 individuals (11,015 households), with 12,731 people from 3,717 households internally displaced due to the adverse weather conditions.
- Adults between 18 and 64 years were the most affected age group (56%), followed by children below the age of 18 (31%) and elderly above 64 (13%). Notably, more than half of affected people were female (54%).
- Urgent needs have emerged, with Shelter, NFI and food assistance as critical priorities in the aftermath of the hazards.
- Infrastructure damage was significant, with 1,721 houses completely destroyed, 1,401 houses partially damaged, and 147 water facilities and 16 schools affected.
