Round 8: May 18 to May 22 2024

During this reporting period, DTM teams recorded 9,195 new arrivals across 602 settlements in the 15 districts DTM is operating in. Floods induced the majority of new displacements (71%), with the other main causes being conflict (20%), drought (7%), eviction (1%), and other causes (1%).

MAIN IDP NEEDS IN ASSESSED LOCATIONS (% of settlements)

REPORTED NEEDS AND RESPONSE FOR NEW ARRIVALS

The needs of the majority of IDPs in a location refer to the total IDP population who may have arrived at any time, while new arrival needs refer to IDP flows who arrived in a specified period of time (e.g. round 8). Concerning the former, most IDPs needed food (66%), while others were mainly in need of drinking water (12%) and shelter (10%).

With regards to the new arrivals during May 18th-May 22nd, the main needs reported were shelter materials (87%), food (84%), health services (82%), and non-food items (NFIs) (78%). Overall, the response levels were low compared to reported needs. For example, the response for shelter materials (13% of new arrivals). Other responses include food distribution (17%), health services (6%), and NFIs (6%).

CUMULATIVE DISPLACEMENT BY ROUND

METHODOLOGY AND CONTEXT

This latest round of Emergency Trends Tracking was initiated in April 2024 to monitor displacements movements during the *Gu* rainy season. Districts covered in this round include Afgooye, Afmadow, Baardheere, Baidoa, Balcad, Belet Weyne, Dayniile, Gaalkacyo, Garoowe, Hodan, Jamaame, Jowhar, Kahda, Kismaayo, Luuq.

ETT is a crisis-based tool that tracks sudden displacement triggered by specific events or emerging crises. The objective of ETT is to help prioritize humanitarian response and to enable partners to deliver rapid assistance. Based on previous shock induced displacement patterns, the humanitarian community expects that people will continue to move toward urban areas in search of humanitarian services. Consequently, the ETT coverage focuses on the main urban centers and surrounding villages for each assessed district. The data is collected through Key Informant Interviews (KIIs) at the location level, from Sunday to Wednesday every week. It includes information on new arrivals, numbers and demographic of IDPs, reasons for displacement, intentions, humanitarian assistance and priority needs among others.

LIMITATIONS

The data is collected through Key Informant Interviews (KIIs), consequently the findings should be considered as estimates. Most indicators are also captured for the “majority of the people displaced within a location/because of a specific factor”. For example, the place of origin assessed for the IDPs in one location, is the place of origin of the majority of these IDPs. The detailed information on all places of origin is not collected and reported. Regarding the reasons for displacement, although the ETT breaks down the new arrivals per main cause, IDPs may be displaced because of a combination of factors.

DEFINITIONS

New arrivals: number of individuals who arrive in the settlement a given week. This number doesn't represent new IDPs as new arrivals may be primary but also secondary displacements.

Urban settlements: neighborhoods located in the main administrative town of each district.

Rural settlements: villages outside of cities and towns.

IDP sites: camp and camp-like settings hosting IDPs.

Spontaneous displacement: is an individual or group who initiate and proceed with their migration plans without any outside assistance from the federal/regional authorities or any other type of international or national assistance.

Organized movement: is characterized by external support to the persons on the move, the support could be logistical or financial.

DISCLAIMER

The maps in this factsheet are for illustrative purposes only. Representations and the use of boundaries and geographical names on these maps may include errors and do not imply judgment of the legal status of a territory, nor official recognition or acceptance of these boundaries by IOM.

The ETT tool also adapts to regional contexts: because of the very high number of IDP sites in Khada and Daynile districts in Banadir region and in Baidoa district in Bay region, a zonal approach has been adopted for these areas. Each week, KIIs are first conducted at the zone level to indicate to the field teams which locations have received the most new arrivals and which need to be assessed.

To facilitate the joint analysis of the CCCM (Camp Coordination and Camp Management) Cluster's New Arrivals Tracker (NAT) and ETT data, the assistance and needs indicators are identical in both tools.
