DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION, ETHIOPIA

ROUND 14: NOVEMBER - DECEMBER 2018

Oromia REGION - KEY FINDINGS

LOCATION AND CAUSE OF DISPLACEMENT:

1,145,848 displaced individuals comprising 180,772 households in 515 displacement sites were identified in Oromia region. These figures represent an increase of 238,323 in the total individuals (+26.26%) an increase of 36,871 households (+25.62%) and an increase of 49 sites (+10.52%) since round 13 (September/October 2018). 41.0% sites opened in 2017 and 35.8% opened in 2018. Conflict was the primary cause of displacement for an estimated 86% of the displaced population.

DEMOGRAPHICS: 51% of displaced individuals were female and 49% were male. 59% were younger than 18 years old. 5% were over 60 years old.

SHELTER: 197 sites reported that over 25% of households were living in shelters that were below regional and cultural standards.

WASH: Only 64 sites meet SPHERE standards of access to over 15 liters of water per person per day. 199 (39%) displacement sites reported having no latrines.

FOOD, NUTRITION AND LIVELIHOODS: 33 (6%) sites, representing 96136 individuals, reported no access to food. 78% of sites reported that IDPs did not have access to income generating activities.

HEALTH: Diarrhea was the primary health concern in this round of data collection with 142 sites reporting this.

EDUCATION: In 55% of sites 50% or less of the children on site are attending formal primary school. Formal primary school education is available at 431 sites. Alternative basic education (ABE) is available at 46 sites.

COMMUNICATION: 40% of sites reported that Site Management were IDPs primary source of information followed by Local Leader at 32% of sites. Figure 1 illustrates trends in stock totals of displacement in the region over time compared to recent displacement. Figure 2 shows IDP numbers disaggregated by cause over time.

Figure 1: Trends in stock totals of displacement and new displacements

Figure 2: IDPs by cause of displacement by round

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION, ETHIOPIA ROUND 14: NOVEMBER - DECEMBER 2018

MOBILITY TRENDS AND CAUSE OF DISPLACEMENT

Conflict has consistently been reported as the primary cause of displacement in the region (as indicated by figure 4). IDPs displaced in 2018 and before 2017 reported that conflict was the primary driver for their displacement.

35.8% of all sites identified opened in 2018 while 41.0% opened between January and December 2017. 23.2% of sites opened before 2017.

Figure 3 shows the number of IDPs displaced by zone and cause of displacement. Figure 4 shows the distribution of IDPs by driver of displacement and time of displacement.

56% of IDPs in the region are internally displaced from the region, within the region. Of the IDPs displaced within the region, 48% were displaced within their zone of origin.

32.0% (366,888) of IDPs had reportedly been previously displaced. IDPs from 33 (6.4%) sites were leaving the site. Of these, IDPs from 21 sites were going to the nearest village and IDPs from 4 sites intended to return to their place of origin.

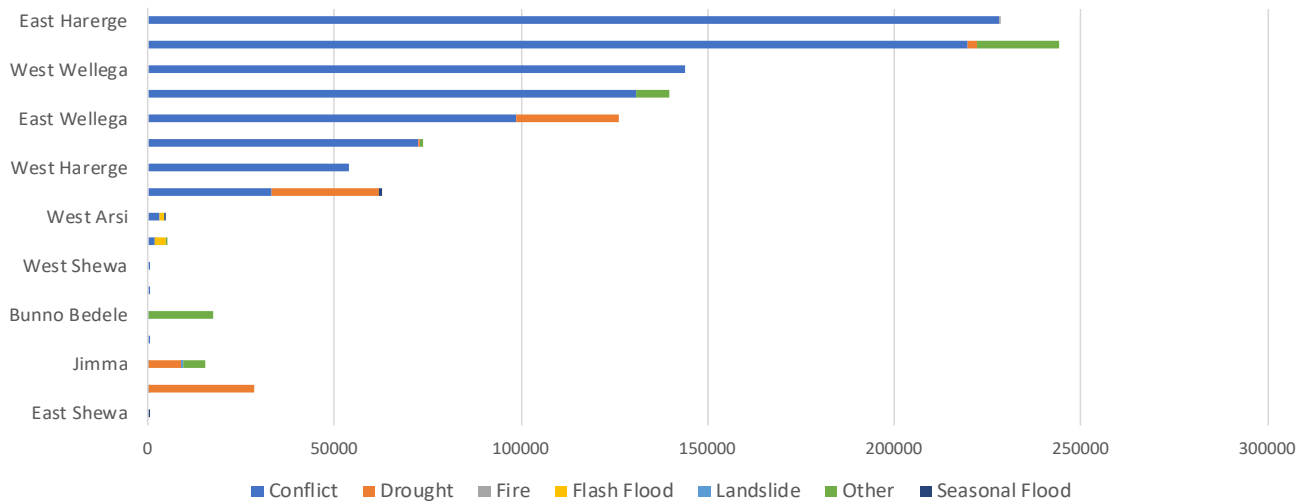

Figure 3: IDPs by zone and causes of displacement

	Conflict Induced	Climate Induced	Other	Grand Total
Before 2017	155,592	84,298	25,944	265,834
During 2017	437,581	17,838	14,624	470,043
In 2018	393,285	1,304	15,382	409,971
Grand Total	986,458	103,440	55,950	1,145,848

Figure 4: IDPs by causes and duration of displacement

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION, ETHIOPIA

ROUND 14: NOVEMBER - DECEMBER 2018

DURABLE SOLUTIONS, VULNERABILITIES AND DEMOGRAPHICS

At 53.79% of sites IDPs foresaw a resolution to their displacement, while IDPs at 46.02% of sites did not. At the remaining sites key informants either did not know (0.19%), or were not asked the question in a previous round.

At 22.72% of sites IDPs prefer reintegration as a durable solution to their displacement while at 29.71% sites they prefer return. 47.57% of sites reported that IDPs prefer relocation. At 0.00% of sites this information is unknown.

Figure 5 shows the percentage of sites reporting various obstacles to returns, while figure 6 shows support IDPs need to return or reintegrate.

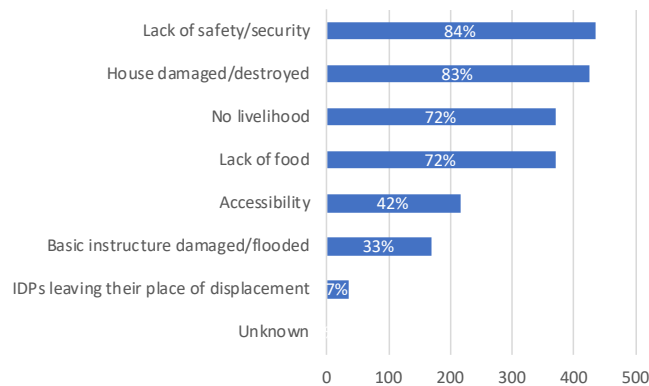

Figure 5: % Sites reporting obstacles to return

The demographic breakdown is shown in figure 7. Individuals with specific vulnerabilities were also reported at displacement sites and are represented in figure 8.

Figure 6: % Sites by support needed to return or reintegrate

Figure 7: Demographic breakdown

Vulnerabilities	# of IDPs
Breastfeeding Mothers #	31,883
Elderly headed Households	11,234
Elderly Persons without care givers	9,382

DISPLACEMENT TRACKING MATRIX (DTM) OROMIA REGION, ETHIOPIA ROUND 14: NOVEMBER - DECEMBER 2018

ABOUT DTM

DTM GLOBAL

The Displacement Tracking Matrix (DTM) is a system to track and monitor displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route. More information is available at www.globaldtm.info.

DTM IN ETHIOPIA

In Ethiopia, data is collected at zone, woreda and site level. Since September 2016, fourteen rounds of assessments have been completed. The DTM programme is implemented in close collaboration with the National Disaster Risk Management Commission, regional, zonal and woreda counterparts and DTMs implementing partner, the Danish Refugee Council (DRC).

METHODOLOGY

IOM's DTM team composed of enumerators from IOM and DRC were deployed across the country to collect the data. The process involved the following steps:

Zone level: Interviews with key informants from

the Disaster Prevention and Preparedness Office (DPPO), community representatives, and the education and health offices collect Information including (among others) estimated caseload of displaced population, identification of woredas within the zone that host displaced populations, reason for displacement, time of arrival of IDPs and location of origin.

Woreda level: Information is collected from key woreda informants and includes (among others) estimated length of stay, number of displaced households and individuals at woreda level, displaced population by type of temporary settlements and approximate locations of identifiable displacement sites. The information is used to plan site assessments.

Site assessments: In-depth IDP site assessments capture detailed information through key informant interviews, direct observation and focus group discussions with male, female, elderly, children and IDP representatives. Data on available services by sector, accessibility constraints, exact type, location and name of the site, place of origin of IDPs, estimated size and type of the site and most common type of shelter are captured. Age and gender disaggregation for the site is extrapolated using a demographic calculator

tool based on the age range and sex of the household members of 20 randomly selected households from the site.
