New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Sector partners for 427 children of 6-59 months. Of the 427 children screened, the MUAC reading was: 6 children (4 from inaccessible and 2 from accessible area) were in the Red category, 31 were in the Yellow category and 390 were measured in the Green category. No case of Oedema was reported in the 5 LGAs that sent in reports.

The results also include 80 children from neighbouring LGAs (52 from Bama, 7 from Mobbar and 21 from Ngala): of all the 80 children measured, none was in red category, 75 were in the green category and 5 in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. Please note, the data presented are not surveillance results and should be interpreted with caution.
