

Fig 1 Key highlights

OVERVIEW

The rainy season in Nigeria, which typically peaks between April and October, has brought hefty rains, resulting in widespread flooding across many states. In Adamawa State, the flooding has been exacerbated by the overflowing of the Kiri Dam in Tudun Tsira, Shelleng local government area (LGA). The breach has caused severe flooding in Kwakwambe, Lure, Nbalang, Imburu, and Bare communities in Numan local government area (LGA). These floods have devastated infrastructure, crops, and shelters, displaced numerous households, and severely impacted livelihoods.

Between 3 and 9 September 2024, the IOM Displacement Tracking Matrix (DTM), in collaboration with the National Emergency Management Agency (NEMA), the Adamawa State Emergency Management Agency (ADSEMA), and the Nigerian Red Cross Society (NRCS), identified 38 locations in Adamawa State that were impacted by floods or received internally displaced persons (IDPs) due to the flooding. Through a network of 56 key informants and field focal points, and in close coordination with other humanitarian partners and local authorities, DTM conducted assessments in these locations to provide insights to the humanitarian community on the affected population's primary needs, vulnerabilities, and mobility intentions.

In the nine (9) LGAs of Adamawa State that were assessed, DTM identified 24,169 individuals in 4,373 households affected by the floods. These individuals included IDPs who were displaced by the floods and residents who were impacted by the floods but remained in their communities. The affected population included 7,074 individuals and 3,120 returnees. Twenty-two per cent (22%) of the affected houses are habitable but need repair, thirty-one per cent (31%) of the houses are partially damaged but need repairs, and 18 per cent (18%) of the houses are destroyed. In eighty-two per cent (82%) of the locations assessed, crop and vegetable farming were among the primary sources of income.

METHODOLOGY

Crises and emergencies require the humanitarian community to act urgently. As a subcomponent of DTM's mobility tracking, flash reports utilise direct observation and a broad network of key informants to monitor sudden displacement resulting from natural disasters or attacks and collect information on the number, profile, and immediate needs of affected populations.

In the initial 24 - 48 hours after an incident, DTM Nigeria activates a rapid assessment to document the event, urgent needs of affected individuals, demographic information, and impact. DTM Nigeria issues an Early Warning Flash/Incident report within 72 hours if displacement occurs, notifying partners and stakeholders.

FLOOD SITUATION REPORT — ADAMAWA STATE

LGAs affected by floods

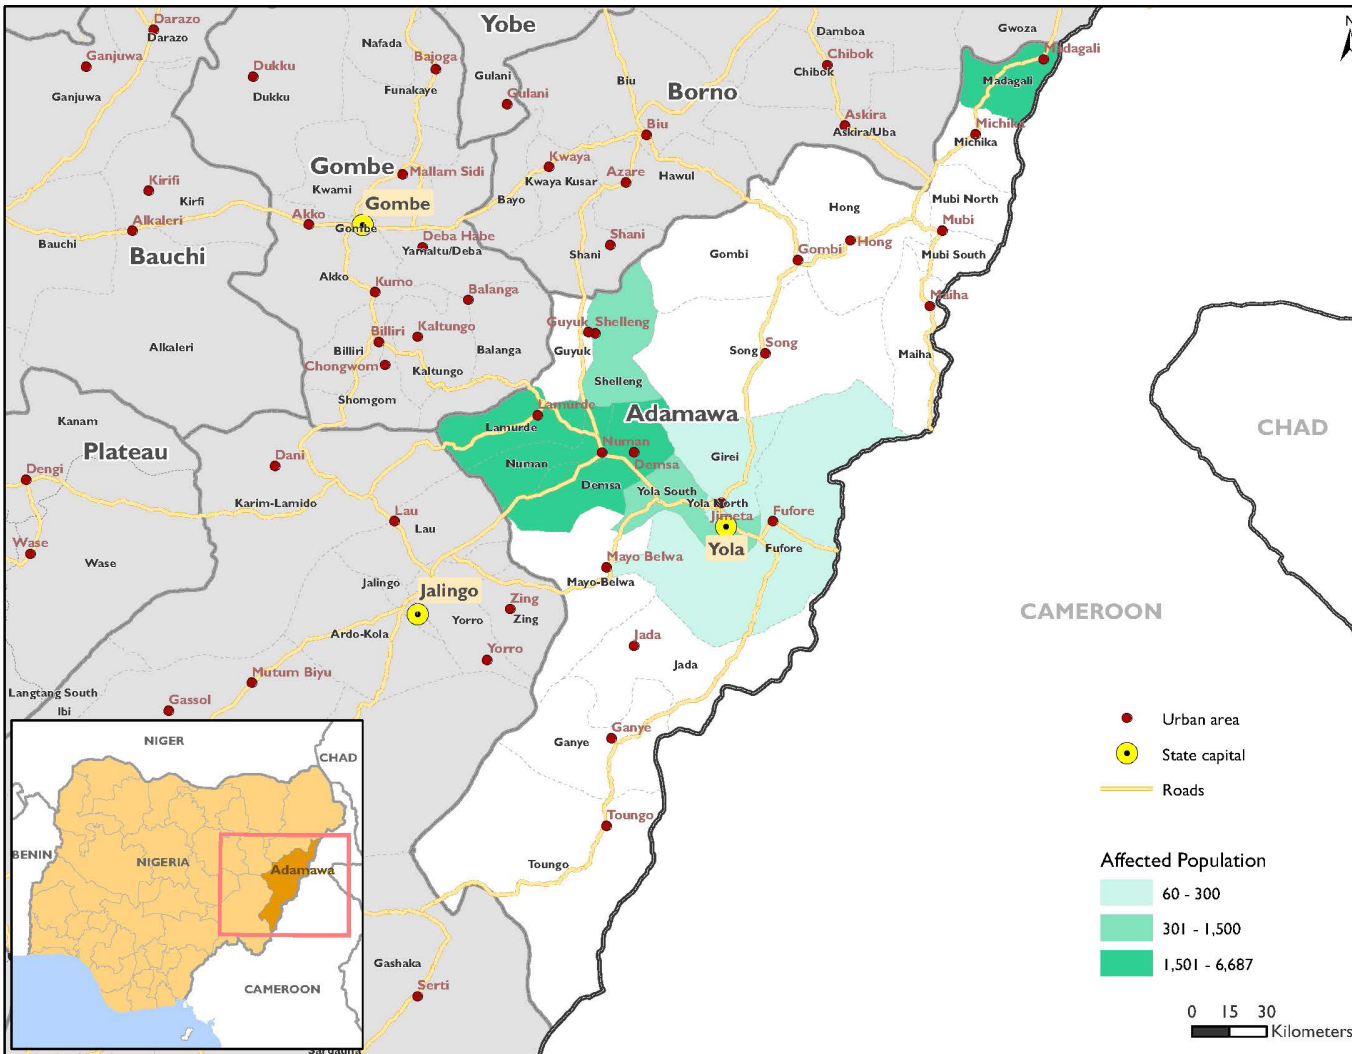

Fig 2 Demographic breakdown

The demography analysis of the flood-affected population in Adamawa State indicates that children aged 6 to 17 represent the largest group, comprising thirty-nine per cent, which underscores the critical impact on school-aged youth. Adults aged 18 to 59 years follow with thirty-four per cent, highlighting significant effects on the working population and potential economic repercussions. Children aged 1 to 5 years account for fourteen per cent, pointing to the need for child-focused health and nutrition support. Infants less than one year make up six per cent, emphasising the importance of maternal and infant care in relief efforts. In contrast, the elderly (60 years and above) represent seven per cent, indicating a need for special care provisions for older adults.

The gender distribution shows that females make up fifty-four per cent of the population and males forty-six per cent, suggesting slightly higher vulnerability among women.

The depiction and use of boundaries, geographic names, and related data shown on maps and included in this report are not warranted to be error-free, nor do they imply a judgment on the legal status of any territory or any endorsement or acceptance of such boundaries by IOM.

Numan LGA had the highest number of affected persons, with 6,687 individuals or 28 per cent of the affected population in the state. Demsa followed Numan with 6,288 individuals, or 26 per cent of those affected. Madagali and Lamurde LGAs reported significant impacts, with 4,550 and 4,490 individuals, respectively, accounting for 19 per cent each of the total affected population. Shelleng LGA had affected 1,440 individuals, or six per cent, while Yola South, Girei, and Fufore LGAs recorded 314, 195, and 145 individuals, respectively, each representing one per cent of those affected. Yola North was the least affected, with only 60 individuals, amounting to less than one per cent of the total affected population.

KEY HIGHLIGHTS

Food was reported among the top three most urgent, with an overwhelming ninety-seven per cent (97%) of respondents identifying it as a critical necessity. The devastation caused by the flood has severely disrupted livelihoods, leaving many without access to their regular food sources. Households that relied on farming and local markets have been particularly hard-hit, as the floodwaters destroyed their crops and food supplies. Immediate food assistance is crucial to prevent widespread hunger and malnutrition among the affected population.

Non-food items (NFIs) also emerged as a significant need, with ninety-five per cent (95%) of the population highlighting this as urgent. Due to the flood, many families have lost essential household items such as bedding, cooking utensils, and clothing. The lack of these essential items exacerbates daily living challenges as displaced families struggle to maintain a sense of normalcy and dignity amidst the crisis. Providing NFIs is vital to helping the affected communities rebuild their lives and recover from the disaster.

Eighty-nine per cent (89%) of respondents identified shelter as a critical need, reflecting the extensive damage to homes and shelters across the flood-affected areas. Many families have been displaced and live in temporary shelters that are inadequate for long-term habitation. The lack of proper shelter exposes vulnerable populations, including women and children, to further risks, such as health complications and insecurity. Addressing shelter needs will help restore stability and provide a safe space for displaced families to regroup and recover.

Water, sanitation, psychosocial support, and health services, though reported at lower percentages—five per cent (5%) and three per cent (3%) respectively—remain essential for the well-being of the population. Clean water and proper sanitation facilities are critical to preventing the outbreak of waterborne diseases. At the same time, psychosocial and health support services can help mitigate the emotional and physical toll of the disaster. Although fewer respondents reported these needs, they are nonetheless crucial in ensuring the overall recovery and health of the affected communities.

Fig 3 Top most urgent needs (multiple responses)

VULNERABILITY

Diverse groups of vulnerable people were identified among the displaced population due to the floods. Pregnant women (421 individuals), breastfeeding mothers (791 individuals), the elderly (1,556 individuals), and persons with chronic illnesses (27 individuals) require immediate and sustained access to healthcare services. These individuals face significant health risks in displacement settings, where access to healthcare services may be limited, and living conditions could exacerbate pre-existing conditions. Unaccompanied children (56 individuals) and orphaned minors (114 individuals) need protection services to ensure their safety and well-being.

Fig 4 Vulnerable persons

IMPACT AND GAPS

Livelihood

The breakdown of income sources for the affected population reveals a heavy dependence on crop/vegetable farming, accounting for eighty-two per cent (82%) of locations assessed. Agriculture, particularly crop and vegetable farming, is the dominant livelihood activity for most individuals in the assessed locations in Adamawa State. Livestock rearing accounts for eight per cent of the income sources. In comparison, casual labourers and fishing each contribute five per cent each, highlighting a predominantly agriculture-based livelihood with limited diversification among the population—about two per cent of income sources.
