

Fig 1 Key highlights

OVERVIEW

The rainy season in Nigeria typically occurs annually, with the highest concentration of rainfall between June and September. Many states have been impacted by hefty rains resulting in significant flooding that has devastated various communities. The floods have caused extensive damage to infrastructure, crops, and shelters, severely affecting livelihoods and displacing households. Climate variability and human-induced factors have exacerbated recently, leading to increased displacement across Nigeria.

Between 4 and 9 September 2024, the Displacement Tracking Matrix (DTM), in collaboration with the National Emergency Management Agency (NEMA), the Gombe State Emergency Management Agency (GOSEMA), and the Nigerian Red Cross Society (NRCS), identified 42 locations in Gombe State that were impacted by floods or received internally displaced persons (IDPs) due to the flooding. Through a network of 30 key informants and field focal points, and in close coordination with other humanitarian partners and local authorities, DTM conducted assessments in these locations to provide insights to the humanitarian community on the affected population's primary needs, vulnerabilities, and mobility intentions.

In the eight (8) local government areas (LGAs) of Gombe State that were assessed, DTM identified 14,910 individuals in 1,741 households affected by the floods. The floods displaced IDPs and residents impacted remained in their communities. The affected population included 2,994 individuals and 339 IDPs. Thirty-eight per cent (38%) of the affected houses are habitable but need repair, twenty per cent of the houses are partially damaged but need repairs and 22 per cent of the houses are destroyed. In 93 per cent (93%) of the locations assessed, crop farming was among the primary sources of income.

METHODOLOGY

Crises and emergencies require the humanitarian community to act urgently. As a subcomponent of DTM's mobility tracking, flash reports utilise direct observation and a broad network of key informants to monitor sudden displacement resulting from natural disasters or attacks and collect information on the number, profile, and immediate needs of affected populations. In the initial 24 - 48 hours after an incident, DTM Nigeria activates a rapid assessment to document the event, urgent needs of affected individuals, demographic information, and impact. DTM Nigeria issues an Early Warning Flash/Incident report within 72 hours if displacement occurs, notifying partners and stakeholders.

FLOOD SITUATION REPORT — GOMBE STATE

LGAs affected by floods

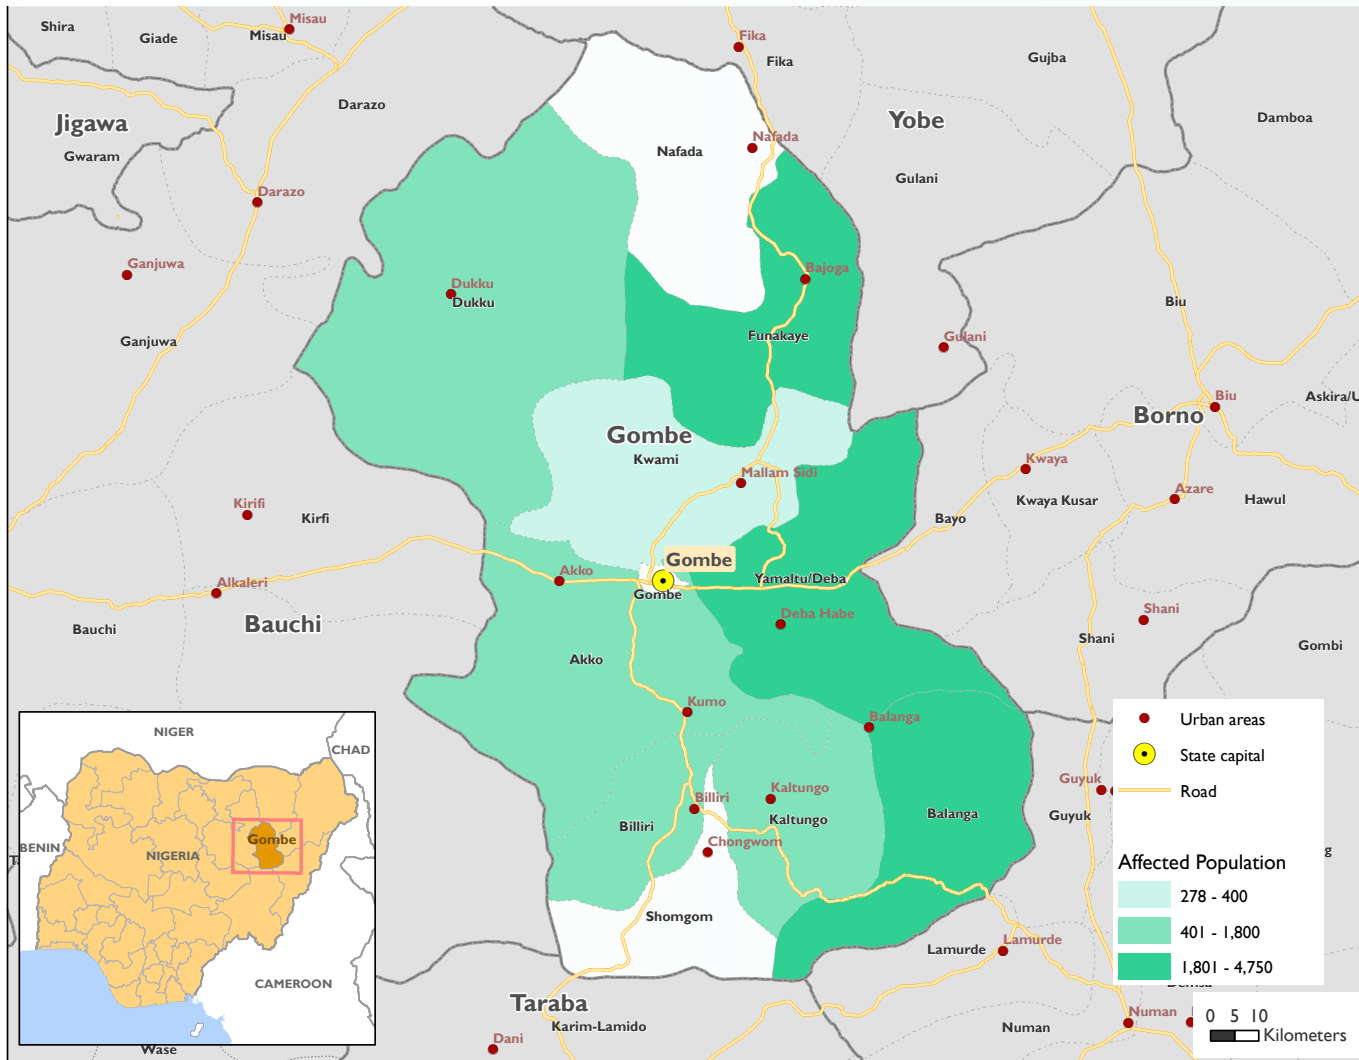

Fig 2 Demographic breakdown

The demographic analysis of the population affected by the flood in Gombe State highlights key groups that will require targeted assistance. Children between 1 and 17 years represent a significant portion of the population, necessitating attention to their educational, nutritional, and protection needs. As the largest group, adults (18-59 years) are expected to play a central role in recovery efforts and may need support to regain their livelihoods. Older people, though a smaller group, remain particularly vulnerable and require special attention to health and mobility needs. The overall population is almost evenly split between males and females, with a slight majority of females (59%). This balanced distribution suggests that response efforts should be designed to address the needs of both genders equally, with an awareness of gender-specific vulnerabilities and roles. Gender-sensitive approaches should be incorporated into all aspects of the response.

The depiction and use of boundaries, geographic names, and related data shown on maps and included in this report are not warranted to be error-free, nor do they imply a judgment on the legal status of any territory or any endorsement or acceptance of such boundaries by IOM.

Yalmatu Deba LGA had the highest number of affected persons with 4,750 individuals or 32 per cent of the affected population in the State. Yalmatu Deba was followed by Funakaye which had 3,338 individuals or 22 per cent of the affected population. Balanga LGA was reported to host 1,874 individuals or 13 per cent, affected by the flood; 1,732 individuals or 12 per cent were estimated to be affected by the flood in Dukku LGA, and Kaltungo LGA recorded 1,284 individuals or nine per cent, affected by the flood. In Akko LGA, 1,222 individuals or eight per cent were estimated to be affected by the flood; 432 individuals, or three per cent, were among the flood-affected in Billiri LGA while 278 individuals or two per cent, were affected by the flood in Kwami LGA.

KEY HIGHLIGHTS

Food was reported among the top three most urgent needs in 41 per cent of locations assessed. This may be due to disrupted food supply chains, loss of crops, and livelihood destruction to flooding. Food was followed by non-food items (NFIs) in 37 per cent of locations assessed: A significant proportion of the population requires non-food items, such as blankets, clothing, cooking utensils, and hygiene products. This suggests that many people have lost personal possessions or have insufficient resources to meet their basic needs.

Twenty nine per cent of the locations assessed need shelter assistance, reflecting damage to homes and displacement. Temporary shelter solutions, as well as long-term housing rehabilitation, will be essential to support the affected population.

Nine per cent indicated a need for educational support, such as rebuilding schools or providing educational materials, and seven per cent expressed a need for healthcare services and medical supplies.

The relatively low demand for psychosocial support and water and sanitation might suggest that mental health needs and access to clean water and sanitation are underreported or prioritised by affected communities. However, this remains an essential area of focus, as the psychological impact of displacement and loss, and the direct health risks associated with inadequate water and sanitation infrastructure. The low need for security services suggests that, for now, the affected populations feel relatively safe regarding physical security. However, ongoing monitoring will be necessary to ensure that security remains stable as humanitarian efforts progress.

In conclusion, the most pressing needs were related to food, non-food items, shelter, education, and health, which required immediate attention. Efforts to address these areas will be critical in stabilising the affected communities and helping them recover from the floods' impacts.

Fig 3 Top most urgent needs (multiple responses)

VULNERABILITY

Diverse groups of vulnerable people were identified among the displaced population. Pregnant women (116 individuals), breastfeeding mothers (554 individuals), the elderly (542 individuals), and persons with chronic illnesses (53 individuals) require immediate and sustained access to healthcare services. These individuals face significant health risks in displacement settings, where access to healthcare services may be limited, and living conditions can exacerbate pre-existing conditions.

Fig 4 Vulnerable persons

IMPACT AND GAPS

Livelihood

The breakdown of income sources for the affected population, reveals a heavy dependence on crop/vegetable farming, accounting for a substantial 93 per cent of locations assessed. Agriculture, particularly crop and vegetable farming, was the dominant livelihood activity for most individuals in the assessed locations in Gombe State. Other income sources included petty trade, which is mentioned in five per cent of the assessed locations. Casual laborers, recorded in two per cent of the locations, suggesting a small portion of the population engages in unskilled or semi-skilled labor.
