

Fig 1 Key highlights

OVERVIEW

The rainy season in Nigeria typically occurs annually, with the highest concentration of rainfall between June and September. Hefty rains have impacted many states, resulting in significant flooding that has devastated various communities. The floods have caused extensive damage to infrastructure, crops, and shelters, severely affecting livelihoods and displacing many households. Climate variability and human-induced factors have exacerbated the flood recently, leading to increased displacement across Nigeria.

Between 5 and 11 September 2024, the Displacement Tracking Matrix (DTM), in collaboration the Katsina State Emergency Management Agency (KATSEMA), the national bureau of statistics and the Nigerian Red Cross Society (NRCS), identified 234 locations in Katsina State that were impacted by floods or received internally displaced persons (IDPs) due to the flooding. Through a network of 56 key informants and field focal points, and in close coordination with other humanitarian partners and local authorities, DTM conducted assessments in these locations to provide insights to the humanitarian community on the affected population's primary needs, vulnerabilities and mobility intentions.

In the thirty-two (32) local government areas (LGAs) of Katsina State that were assessed, DTM identified 123,377 individuals in 16,563 households affected by the floods. These individuals included IDPs displaced by the floods and residents impacted by the floods but remained in their communities. The affected population included 12,927 displaced individuals and 473 returnees.

Thirty-two per cent (32%) of the affected houses are habitable but need repair, 17 per cent are partially damaged and 10 per cent are totally destroyed. In 70 per cent (70%) of the locations assessed, crop farming was among the primary sources of income.

METHODOLOGY

Crises and emergencies require the humanitarian community to act urgently. As a subcomponent of DTM's mobility tracking, flash reports utilise direct observation and a broad network of key informants to monitor sudden displacement resulting from disasters or attacks and collect information on the number, profile, and immediate needs of affected populations. In the initial 24 - 48 hours after an incident, DTM Nigeria activates a rapid assessment to document the event, urgent needs of affected individuals, demographic information, and impact. DTM Nigeria issues an Early Warning Flash/Incident report within 72 hours if displacement occurs, notifying partners and stakeholders.

IOM Nigeria thanks the following partners for their continued support and collaboration in making this report available.

FLOOD SITUATION REPORT —KATSINA STATE

LGAs affected by floods

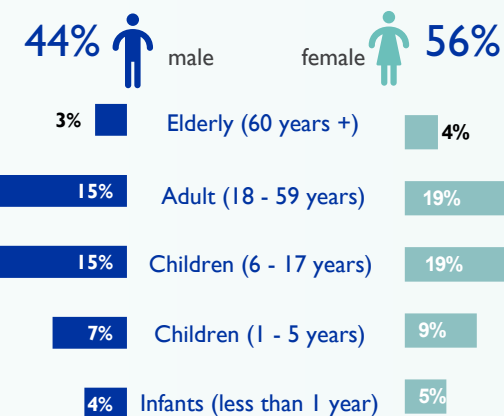

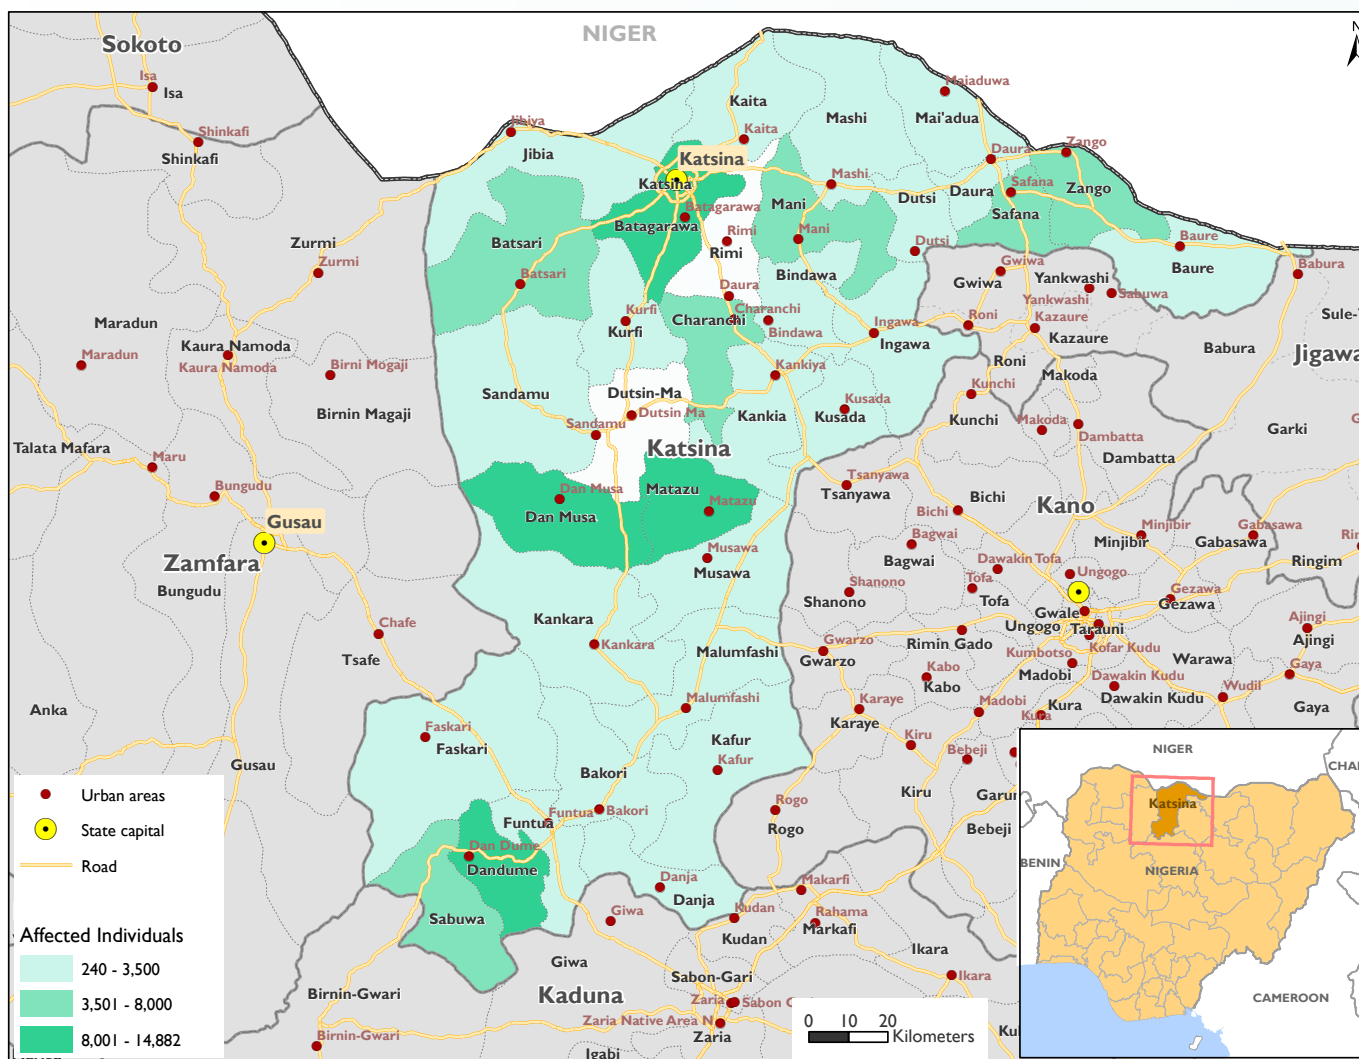

Fig 2 Demographic breakdown

The demographic analysis of the population affected by the flood in Katsina State highlights key groups that will require targeted assistance. Children between 1 and 17 years represent a significant portion of the population, necessitating attention to their educational, nutritional, and protection needs. The largest group, adults (18-59 years), are expected to play a central role in recovery efforts and may need support to regain their livelihoods. Older people, though a smaller group, remain particularly vulnerable and require special attention to health and mobility needs. The overall population consist of a higher percentage of females (56%) compared to males (44%), which must be taken into account in all aspect of the response. Gender-sensitive approaches should be incorporated into all aspects of the response.

The depiction and use of boundaries, geographic names, and related data shown on maps and included in this report are not warranted to be error-free, nor do they imply a judgment on the legal status of any territory or any endorsement or acceptance of such boundaries by IOM.

Katsina LGA had the highest number of affected persons, with 14,882 individuals or 12 per cent of the total affected population in the state. Dan Musa followed Katsina with 13,224 individuals, or 11 per cent, of the affected population. Dandume LGA was reported to host 10,272 individuals or eight per cent, affected by the flood; 9,721 individuals or seven per cent, were estimated to have affected by the flood in Batagarawa LGA, and Mutazu LGA recorded 8,393 individuals or six per cent, affected by the flood. In Mani LGA, 7,699 individuals or six per cent, were estimated to be affected by the flood, while 6,490 individuals or five per cent, were among the flood-affected in Zango LGA.

KEY HIGHLIGHTS

Shelter was reported among the top three most urgent needs in 97 per cent of locations assessed reflecting damage to homes and displacement. Temporary shelter solutions, and long-term housing rehabilitation will be essential to support the affected population. Shelter was followed by food in 96 per cent of locations assessed. This may be due to disrupted food supply chains, crop losses and livelihood destruction due to the flooding.

Seventy-two per cent of the population requires non-food items (NFI), such as blankets, clothing, cooking utensils, and hygiene products. This suggests that many people have lost personal possessions or have insufficient resources to meet their basic needs.

Eleven per cent of the locations assessed need psychosocial support. Five per cent of the population is experiencing health-related challenges, including a lack of access to medical services, the spread of waterborne diseases, or injuries sustained during the floods. There is a need for healthcare services and medical supplies in these locations.

In conclusion, the most pressing needs were food, shelter, non-food items, mental health and psychosocial support, health and water/sanitation, which required immediate attention. Efforts to address these areas would be critical in stabilising the affected communities and helping them recover from the impacts of the floods.

Fig 3 Top most urgent needs (multiple responses)

VULNERABILITY

Diverse vulnerability groups were identified among the displaced population. Pregnant women (4,129 individuals), breastfeeding mothers (9,101 individuals), the elderly (8,237 individuals), and persons with chronic illnesses (1,774 individuals) require immediate and sustained access to healthcare services. These individuals face significant health risks in displacement settings, where access to healthcare services may be limited, and living conditions could exacerbate pre-existing conditions. Unaccompanied children (1,046 individuals) and orphaned minors (2,236 individuals) need protection services to ensure their safety and well-being.

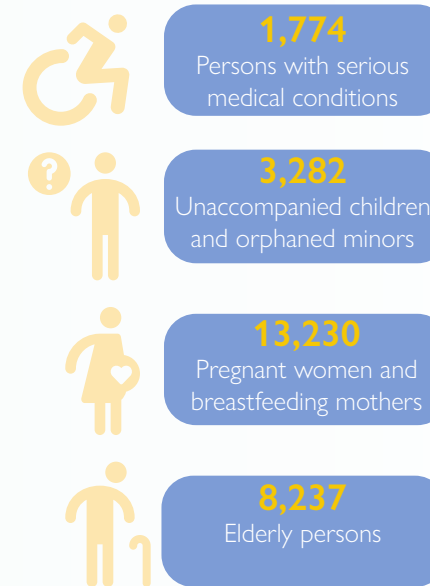

Fig 4 Vulnerable persons

IMPACT AND GAPS

Livelihood

The breakdown of income sources for the affected population, reveals a heavy dependence on crop/vegetable farming, which accounts for a substantial 70 per cent of locations assessed. Agriculture, particularly crop and vegetable farming, is the dominant livelihood activity for most individuals in the assessed locations in Katsina State. Other income sources include petty trade, mentioned in 22 per cent of the assessed locations. Casual labour and humanitarian assistance, recorded in three per cent of the locations.
