

ABOUT FLOW MONITORING (FM)

The International Organization for Migration (IOM) Pakistan's FM provides key insights into the overall migration trends of Afghan nationals returning to Afghanistan, as well as an overview of the profiles of Afghan returnees and their mobility patterns, exploring routes, vulnerabilities, demographics and social characteristics. Between 16 and 31 August, DTM border monitors (BMs) interviewed 427 heads of households through a Flow Monitoring Registry (FMR) form, while 14,435 Afghan returnees were identified through five border crossing points (BCPs) (see map 1). For more information on FM methodology, see page 5.

HIGHLIGHTS

- During this reporting period, DTM teams have observed an increase of one per cent in returns compared to the first two weeks of August 2024.
- Cumulatively, from 15 September 2023, **712,128** individuals have returned to Afghanistan. Thirty-one per cent (221,237 individuals) of this total have returned since 1 January 2024.
- Most of the returnees are undocumented Afghans (81%), followed by PoR holders (17%) and ACC holders (2%).
- Compared to the previous reporting period, fewer Afghans cited fear of arrest (58%) as a reason to return, while the inability to pay rent (38%) and utilities (33%) has grown in significance.

DEMOGRAPHICS

The majority of returnees are individuals between 5 and 17 years of age (39,5%) and individuals between 18 and 59 years of age (39.5%). Overall, there are slightly more female returnees than male ones, comprising 51.8 per cent and 48.2 per cent,

Figure 3. Age and gender of returnees (N = 13,648)*

respectively. Over the past two weeks, two per cent of returnees were identified as vulnerable. Among these vulnerable individuals, the largest groups include elderly (33%), chronically ill persons (28%) and widowed females (19%).

Figure 4. Proportion of vulnerable persons (N = 13,648) and type of vulnerability of those who are vulnerable (N = 284)*

REASONS FOR MOVEMENT

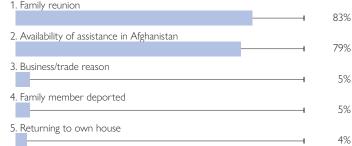

The predominant reported reason for Afghans leaving Pakistan is fear of arrest, with 58 per cent citing this concern. This figure is followed by 38 per cent who are compelled to return due to their inability to afford house rent and 33 per cent due to the inability to pay utilities. Additionally, 28 per cent noted that they returned due

Figure 5. Reasons for leaving Pakistan (Multiple answers, N = 427, can exceed 100%)*

to no employment and smaller segment of 10 per cent indicated that they returned because of low wages. On the other hand, 83 per cent of Afghans have reported family reunification as a reason for choosing their final destination and 79 per cent noted the availability of assistance in Afghanistan as another reason.

Figure 6. Reasons for choosing final destination (Multiple answers, N = 427, can exceed 100%)*

ACCOMMODATION AND SHELTER

While residing in Pakistan, the highest proportion of respondents reported living in rented houses (97%) and three per cent were living in camps.

Around three in four respondents (71%) noted that they would also live in rented houses when settling in Afghanistan. Seventeen per cent intend to live with relatives, while other shelter types represent a smaller share of returnees.

TRAVELLING CONDITIONS

As Afghans travel from their starting points to their destinations, they utilize various modes of transport. In the past two weeks, pick ups have been the primary means, accounting for 46 per cent, with trucks at 45 per cent and minibuses at nine per cent.

All Afghan returnees reported moving with household items and personal belongings. Ninety-nine per cent reported carrying cash and 69 per cent productive assets.

FM METHODOLOGY

To retrieve information on returnees' profiles and mobility patterns, BMs use a Flow Monitoring Registry (FMR) form to interview heads of households of Afghan families returning to Afghanistan. Whilst conducting the FMR, they also obtain information on all family members travelling with the head of household, including gender, age, documentation status and vulnerabilities. Information on the number of Afghan returnees is obtained through different sources which goes through a data harmonization process. This process is outlined in the below figure (see figure 11).

Figure 11. Sources of data and process of data harmonization

DTM Pakistan, UNHCR Pakistan, and IOM Afghanistan's Cross Border Post-Arrival Humanitarian Assistance (CB-PAHA) programme use different methodologies to collect data on various demographic subsets of individuals returning to Afghanistan from Pakistan (outflows). The following flow chart illustrates the relationships between the subsets and how IOM coordinates its various methodologies to develop a robust and comprehensive information management database on return movements. Through official government sources, DTM Pakistan receives data on total incoming and outgoing travellers, disaggregated Cross-Border by nationality (Afghan, Pakistani and third-country nationals) and documentation status. DTM Pakistan does not use data Mobility on incoming travellers for its FM products as it also covers Pakistani nationals and those travelling daily. Data on outgoing travellers is utilized (see step 2), however, only for Afghan nationals who intend to return and live in Afghanistan for an GOVERNMENT OF PAKISTAN extended period of time. DTM Pakistan collects the number Afghan nationals, both undocumented and ACC holders, returning to Afghanistan Flow Monitoring via the Badini, Bahramcha, Chaman (Balochistan) and Torkham (Khyber Pakhtunkwa) BCPs. Returnees are classified as Registry (FMR) Afghans who intend to return and intend to live in Afghanistan for an extended period of time as opposed to those travelling for trade or to visit Afghanistan temporarily.3 This exercise is referred to as Flow Monitoring Registry (FMR). IOM PAKISTAN As part of this exercise, DTM Pakistan collects data from heads of households at the border. Flow Monitoring 2 Returnees that were not counted by DTM Pakistan during the FMR exercise are added to the dataset through the Count (FMC) Government of Pakistan's Identification Verification Alert System (IVAS). In addition, data collected through DTM Pakistan's FMR exercise is triangulated with the figure identified through IVAS which serves as DTM Pakistan's FMC. GOVERNMENT OF PAKISTAN (IVAS) IOM CB-PAHA assists undocumented Afghan returnees in reception centres located close to the Chaman and Torkham 3 CB-PAHA BCPs on the Afghanistan side of the border. The additional returnees covered by CB-PAHA accounts for those Afghan nationals returning circumventing the customs route, which infrequently occurs. After comparing data collected by DTM IOM AFGHANISTAN Pakistan and CB-PAHA in Afghanistan, DTM Pakistan selects the higher number to include in the dataset based on a daily cross-comparison of both data sources. **UNHCR** Pakistan 4 UNHCR PAKISTAN IOM PAKISTAN DTM IN PAKISTAN IS Co-funded by **FUNDED BY** Co-funded by the **European Union** Ministry of Foreign Affairs **European Union Humanitarian Aid**
