## New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Sector partners for 360 children of 6-59 months. Of the 360 children screened, the MUAC reading was: 3 children (from accessible area) were in the Red category, 29 were in the Yellow category and 328 were measured in the Green category. No case of Oedema was reported in the 6 LGAs that sent in reports.

The results also include 25 children from a neighbouring countries (13 moved to Bama, 7 to Mobbar and 5 to Ngala): of all the 25 children measured, no child was in the red category, 23 were in the green category and 2 in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. Please note, the data presented are not surveillance results and should be interpreted with caution.
