## New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Sector partners for 142 children of 6-59 months. Of the 142 children screened, the MUAC reading was: 2 children (one from accessible and one from inaccessible area) were in the Red category, 5 were in the Yellow category and 135 were measured in the Green category. No case of Oedema was reported in the 5 LGAs that sent in reports.

The results also include 22 children from a neighbouring countries (17 moved to Bama, 3 to Mobbar and 2 to Ngala): of all the 22 children measured, no child was in the red category, 21 were in the green category and 1 in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. Please note, the data presented are not surveillance results and should be interpreted with caution.
