New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Sector partners for 206 children of 6-59 months. Of the 206 children screened, the MUAC reading was; 4 children (from accessible area) were in the Red category, 26 were in the Yellow category and 176 were measured in the Green category. No case of Oedema was reported in the 5 LGAs that we received reports from.

The results also include 19 children from neighbouring countries (15 from Bama, 1 from Gwoza and 3 from Ngala); of all the 19 children measured, no child was in the red category with 17 in the green category and the remaining 2 were in yellow category. All children found with acute malnutrition have been admitted in the treatment programme. Please note, the data presented are not surveillance results and should be interpreted with caution.
