DTM's Flow Monitoring Registry (FMR) surveys people on the move at key transit points within South Sudan (SSD) and at its borders. It provides an insight into mobility trends, migration drivers and traveller profiles to inform programming by humanitarian and development partners and by the government. In total, twenty-four Flow Monitoring

Points (FMPs) were active in March 2019, surveying internal flows and cross-border travel with Uganda (UGA), the Democratic Republic of Congo (DRC), Sudan (SDN) and the Central African Republic (CAR). DTM opened five new FMPs in March: Tonga Bus Stop in Upper Nile and Dingimo, Source Yubu, Nabia Pai and Bangaingai in Western Equatoria.

**No. of respondents
(Mar 2019)**

Key insights

- Short-term travel driven by economic reasons, access to goods and services and family visits accounts for most of the flows with Uganda and the DRC.
- Access to healthcare remained the key driver of migration to Sudan, while people moving from Sudan to South Sudan were mostly returning from voluntary travel.
- 3,968 individuals, accounting for 74.3% of overall reported displacement, were forced to leave South Sudan for Uganda. The primary drivers were food insecurity (2,749 individuals), and generalised violence (610). 96.7% reported heading towards a refugee camp.
- 479 people were displaced from DRC to South Sudan. These were largely South Sudanese nationals moving as a result of food insecurity.
- 447 people, most of whom Central African nationals, were displaced to South Sudan by the conflict in CAR.
- 310 were displaced within South Sudan, over half of whom within Yei County. The primary driver was food insecurity followed by generalised violence.
- 2.0% of incoming and internal respondents reported return from displacement as their reason for travel, most of whom came from within South Sudan or from DRC. Relative to the number of people travelling on each route, however, the share of returnees was highest for Sudan, where it accounted for 23.4% of incoming travelers.
- The share of respondents who reported being registered as refugees was highest among those travelling between South Sudan and CAR (39.6%), followed by Uganda (28.2%), Sudan (10.5%) and DRC (3.1%).

Net flows among respondents intending to stay over six months at destination

Country	Inflow	Outflow	Net flow
Uganda	1,078 (267 refugees)	2,275 (1,089 refugees)	-1,197
DRC	818 (40 refugees)	89 (0 refugees)	729
Sudan	340 (37 refugees)	263 (18 refugees)	77
CAR (since 18/03)	422 (176 refugees)	16 (0 refugees)	406

Net flow figures among respondents with long-term intentions to stay are only indicative of existing trends among travellers at the active FMPs. DTM does not have full coverage of cross-border flows. Registered refugee status is self-reported.

The boundaries on the map do not imply official endorsement or acceptance by the Government of the Republic of South Sudan or by IOM. The map is for planning purposes only. IOM cannot guarantee that the map is error free and therefore accepts no liability for consequential or indirect damages arising from its use.

- 1,360 individuals going to or coming from Kenya (847), Tanzania (393), Rwanda (105), Burundi (3) and Ethiopia (2) or who did not disclose the country of departure (10) are not included in further analysis.
- Individuals reporting forced movement due to conflict, natural disaster or food insecurity (if intention to stay over a week) are counted as displaced.
- Individuals travelling together are surveyed as a group, which often corresponds to the household.

Methodology

DTM's Flow Monitoring Registry (FMR) surveys people's movement through key transit points within South Sudan and at its borders. The purpose is to **provide regularly updated information on mobility dynamics and traveller demographics, intentions and motivations**. Data is collected on both **internal and cross-border flows**.

Flow Monitoring Points (FMPs) are positioned at strategic border crossings and transport hubs, as determined by a preliminary assessment of high-transit locations. As a result, **the data is indicative of selected key flows** and does not provide a full or statistically representative picture of internal and cross-border movement in South Sudan.

The FMR methodology aims to track all non-local traffic passing through an FMP between 8:00-17:00, during the week and on weekends. Trained enumerators briefly survey each group of travellers and collect disaggregated information about individual demographics and vulnerabilities. Participation in the survey is voluntary and children under 15 are not directly interviewed.

FMPs are not active overnight as a result of security constraints and operations may be temporarily suspended in periods of increased risk. Due to staffing constraints, full coverage may not be possible at times of exceptionally high movement through the FMP.

Notes: [Rounding] Percentages may not add up to 100% as a result of rounding error. 1. [Displacement] Individuals reporting forced movement due to conflict, natural disaster or food insecurity (if intention to stay over a week) are counted

as displaced. 2. [Group] Individuals travelling together are surveyed as a group, which often corresponds to the household. 3. [F.27] 'Return (Vol.)' = returning from voluntary travel, 'Reun. N.H.R.' = reunification not habitual residence. 4. [F.29] The

number of individuals surveyed on a given day may fluctuate as a result of staffing and access constraints, and does not necessarily reflect the number of individuals travelling.
