## New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using mid-upper arm circumference (MUAC) and Oedema for acute malnutrition was conducted by Nutrition Sector partners for 333 children of 6-59 months. Of the 333 children screened, the MUAC reading was: 11 children (3 from Inaccessible and 8 from accessible area) were in the Red category, 23 were in the Yellow category and 299 were measured in the Green category. No case of Oedema was reported in the 5 LGAs.

The results also include 170 children from neighbouring Cameroon and Republic of Niger (60 moved to Bama, 82 to Mobbar, and 28 to Ngala). Out of the 170 children measured, 6 children were in the red category, 149 were in the green category and 15 children were in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. The data presented is not surveillance results and should be interpreted with caution.
