## New Arrival Malnutrition Screening Summary (children 6-59 months)

An exhaustive nutrition screening using monitoring of symptoms of acute malnutrition mid-upper arm circumference (MUAC) and Oedema was conducted by Nutrition Sector partners for 139 children of 6-59 months. Of the 153 children screened, the MUAC reading was: 5 children (3 from inaccessible and 2 from accessible area) were in the Red category, 17 were in the Yellow category and 131 were measured in the Green category. No case of Oedema was reported in the 7 LGAs.

The results also include 46 children from neighbouring Cameroon, Chad and Republic of Niger (19 moved to Bama, 16 to Mobbar while 11 moved to Ngala). Out of the 46 children measured, 1 was in the red category, 39 were in the green category and 6 children were in the yellow category. All children found with severe acute malnutrition have been admitted for treatment. The data presented is not surveillance results and should be interpreted with caution.
