

The ongoing conflict in Yemen, since March 2015, has led to the displacement of more than 3.6 million people (according to [DTM's 2018 Area Assessment](#)) and datasets can be found [here](#).

DTM's Rapid Displacement Tracking tool collects and reports on numbers of households forced to flee on a daily basis, allowing for regular reporting of new displacements in terms of numbers, geography and needs. In the first five months of 2019, conflict activities have resulted in new patterns of displacement, particularly in within Al Dhale'e and Al Hudaydah governorates.

## About Displacement Tracking Matrix (DTM)

IOM's Displacement Tracking Matrix (DTM) in Yemen is implementing various assessment activities including the Rapid Displacement Tracking (RDT), the Baseline Sub-Area Assessment and Flow Monitoring Registries and Surveys. DTM Yemen also supports the humanitarian planning cycle (HNO/HRP) and clusters with implementation and data processing of the Multi-Cluster Location Assessment (MCLA).

## Methods and Limitations

IOM uses the Rapid Displacement Tracking Tool to compile information on daily basis from various partners including: local and international NGOs, as well as local and national authorities. Compilation is done through document reviews, as well as face-to-face and/or phone interviews. Locations, where IOM has direct access, DTM field teams verify information provided by partners through visual observations, review of individual registries and key informant interviews.
