

Ebola Virus Disease PoE Preparedness at Screening Points – KISORO District

OVERVIEW

Screening operation

- Kisoro has seven (7) Points of Entry (PoEs) with active screening operations in the reported period. Two (2) of them are official PoEs (Cyanika and Bunagana).
- A total of 427,773 screenings have been completed at seven (7) PoEs at the border with the Democratic Republic of the Congo (DRC) and at one (1) PoE with Rwanda.
- Bunagana alone registered approximately 47% of the total flow in Kisoro. Bunagana is the only official PoE bordering with DRC.
- Bunagana registered the highest number of persons screened (199,268).

Demographic

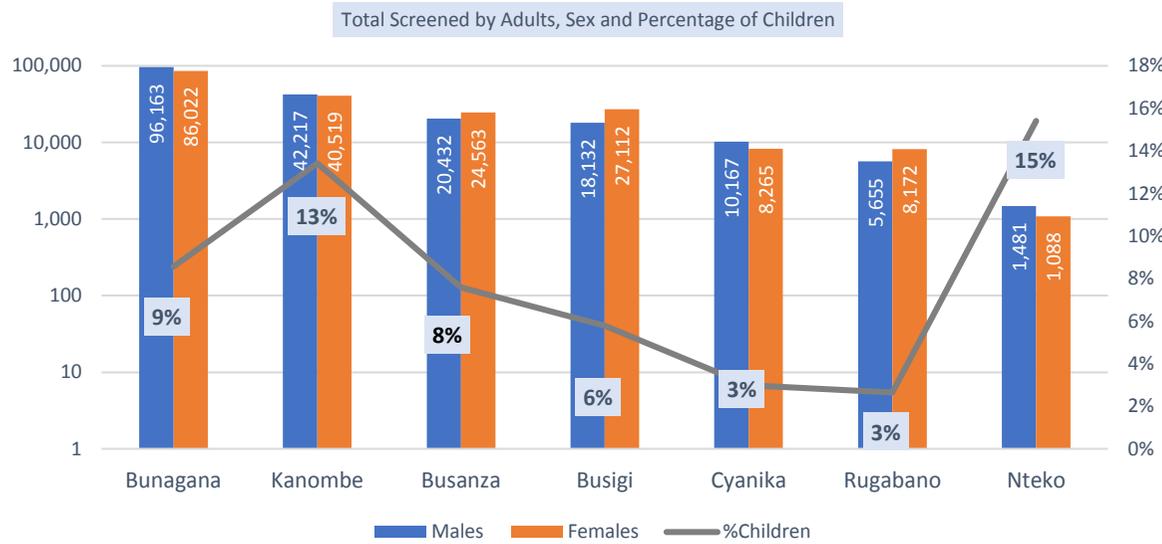

- Ratio of adult females and adult males 46:45.
- 9% of the flow were children under 5 years old.
- 15% of the flow in Nteko were children under 5 years old.
- More adult females crossed in Rugabano (58%) and Busigi (56%) than adult males.

Ebola Virus Disease PoE Preparedness at Screening Points – KISORO District

DETAILS PER POE

The type of flows is influenced by the land configuration (mountainous, forest...) and the type of PoE (formal or informal). The type of access road (main road or rural road) influences the type of flow as well as the reason for travelling. The presence of markets and agricultural activities is a pull factor and may attract more adult women than adult men.

Nteko registered a high flow of children under 5 years old due to high numbers of women working in the markets or in the fields that cross with their toddlers since they spend the entire day out of their residences.
