Background of Situation

On September 15, 2014 PHIVOLCS raised an Alert Level 3 on Mayon Volcano and on September 16, the Provincial Government of Albay declared under a state of calamity areas surrounding the volcano namely: Legazpi, Tabaco, Ligao, Santo Domingo, Malilipot, Guinobatan, Camalig, and Daraga.

Pre-emptive evacuation continues for populations residing within the six-kilometer radius permanent danger zone (PDZ) around the volcano and the seven-kilometer extended danger zone (EDZ) on the southeastern flank of the volcano due to the continuing threat of rockfalls, landslides and sudden explosions that may generate lava flow.

Introduction

In a letter dated September 29, 2014, the DSWD as National Lead of the CCCM and Protection Cluster requested IOM to respond to continuing needs of the evacuation centers in Albay Province and among the requests was the establishment of the Displacement Tracking Matrix (DTM).

On October 4, 2014, IOM sent a seven-person team to roll out the DTM in all the existing evacuation centers. DSWD Field Office V hosted the team and provided personnel to guide the team and assist in the data collection.

Data collection was carried out with touch screen tablets pre-loaded with DTM customized electronic assessment forms. The team visited the total 41 existing sites at the time the assessment was conducted from October 4 – 6, 2014.

History of Previous Eruptions

According to PHILVOCS, Mayon Volcano has erupted at least 50 times from 1616 to 2006.

The most destructive eruptions are:

- Feb 1, 1814 – 1200 Casualties
- Jun 4, 1897 – 350 Casualties
- Feb 2, 1993 – 77 Casualties

Section I: Summary of Observations, Observed Gaps and General Recommendations

Strengths

Strong Evacuation Center Coordination and Management

1. Overall management of response actions is in the hands of the Provincial Government who have personnel in the sites with communication access to the main base of operations.
2. DepEd Personnel provide day to day management of the schools used as Evacuation Centers.
3. LGUs at both the barangay and municipal and city level give personal attention to needs of Evacuees.

Completed but not yet awarded NHA socialized housing units used as temporary shelters for evacuees of Ligao.

Basic Needs are Covered at the Time of Assessment (22 days after start of evacuations)

1. Health Needs are provided with all ECs visited having health staff
2. Food distribution is augmented by many LGUs who give fresh food and meats.
3. Drinking water is provided by LGU and partners trucking in water.

New Shelter Solutions for Started by DSWD and LGU

1. DSWD recognized as evacuees 127 sheltering in host families in Banadero, Daraga
2. Ligao City used the Robredo Livelihood Center to shelter families and provided privacy partitions in the center.
3. Ligao City used completed but not awarded housing units to shelter families.

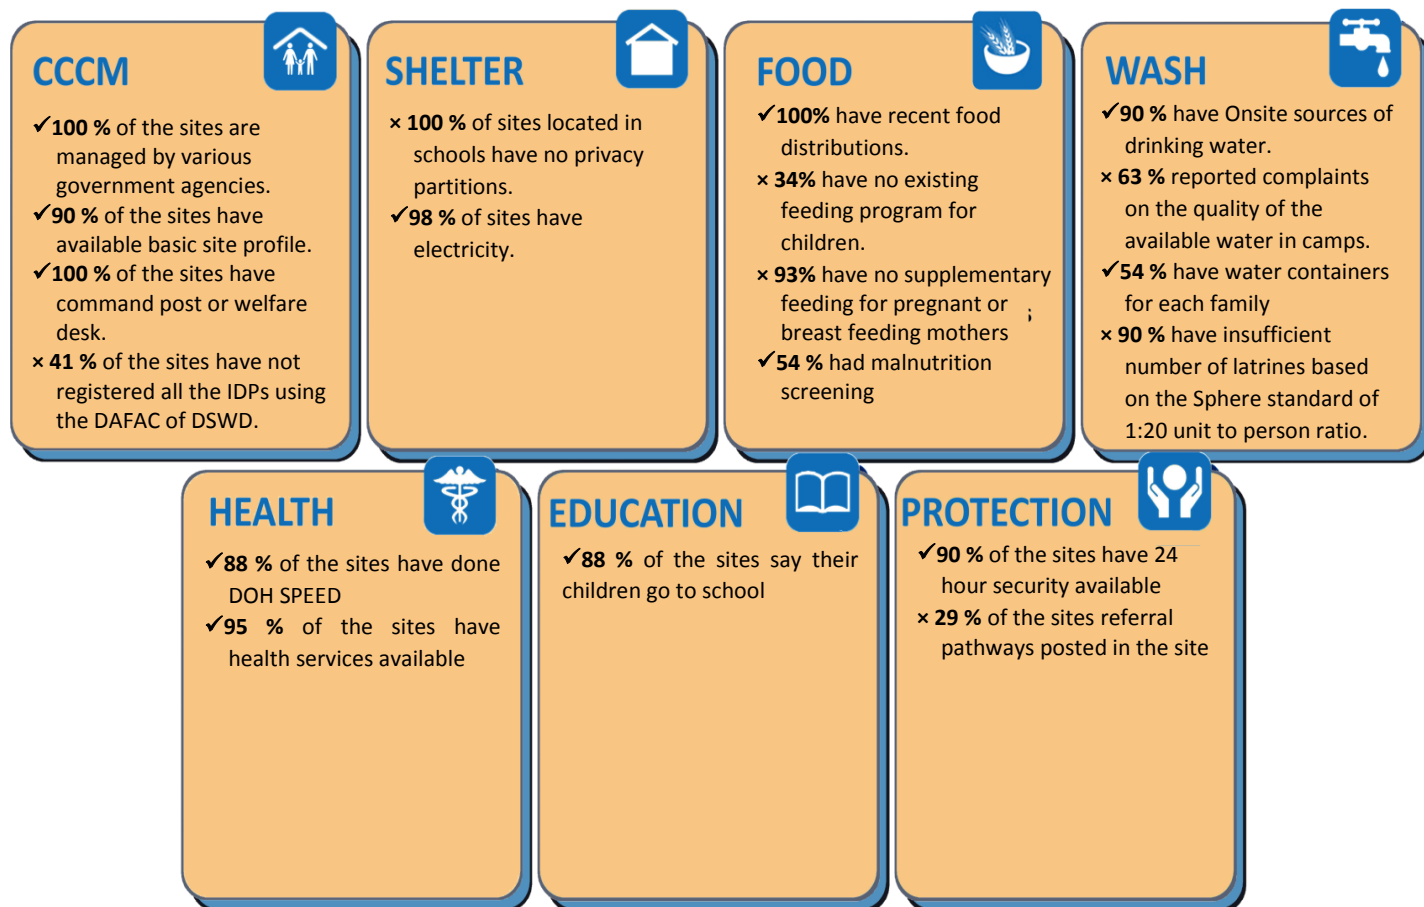

Learnings from Previous Eruptions Guide Response Actions

1. Livestock centers provide safe options for farmers.

Observed Gaps

- Lack of formal training in Evacuation Center Coordination and Management is observed with most staff from various agencies assisting in the handling of evacuation centers.
- Classrooms used as sleeping quarters normally house more than 10 families and have no privacy partitions making it inconvenient in the long term.
- Toilet and bathing facilities are mostly lacking for the current needs of the evacuees.
- Facilities for food preparation and cooking are mostly lacking and present possible fire hazards in some situations.
- Organizing evacuees to be camp leaders and committee heads for sectoral concerns and assist in camp management is not yet implemented.

Snapshot of Trends in 41 Displacement Sites in Albay

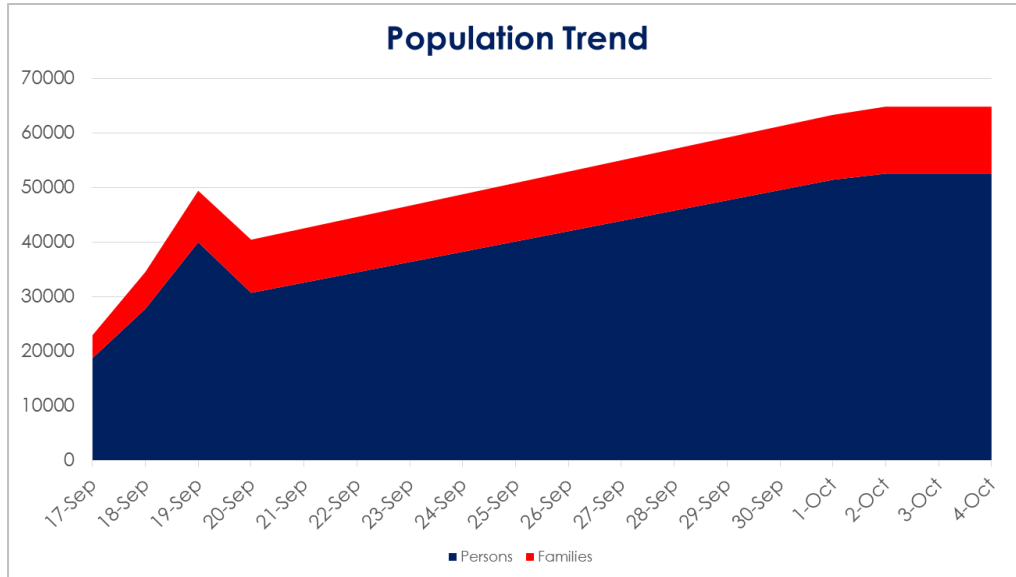

A total of 41 evacuation centers were surveyed for this assessment in the five municipalities and two cities affected. There are a total of 11,096 families with 42,897 individuals.

The Municipality of Guinobatan has the highest number sites (15) and displaced population of 9,923 persons while the Municipality of Malilipot has only 3 sites with the lowest number of displaced population at 2,686 persons.

Summary of Demographic Data

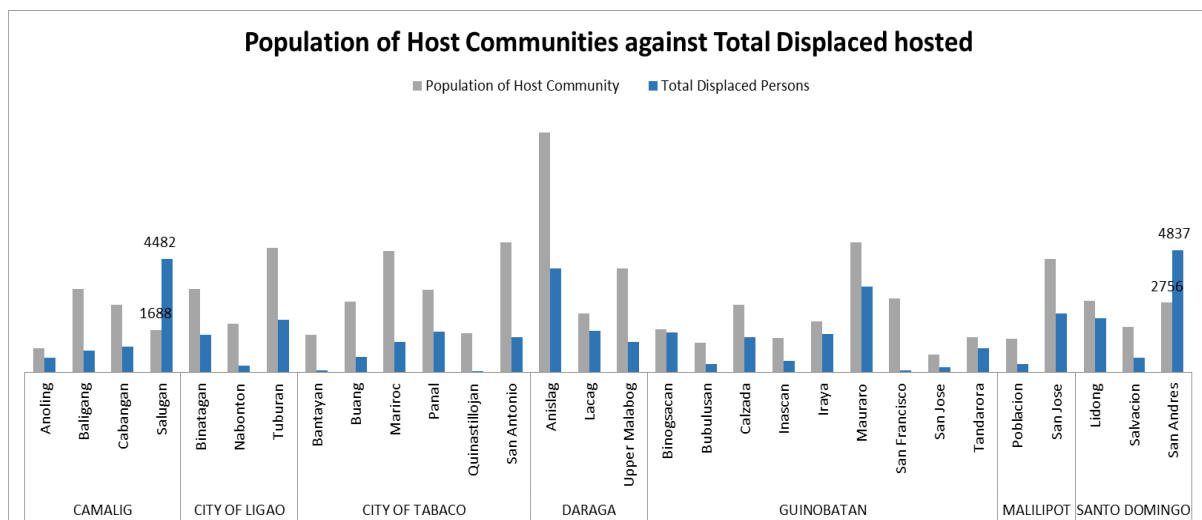

Municipality/City	No. of Sites	No. of Families	No. of Persons	No. of Males	No. of Females	Ave. Fam Size
CAMALIG	4	1,814	6,938	3,520	3,418	3.8
CITY OF TABACO	7	1,197	5,002	2,541	2,461	4.2
DARAGA	5	1,662	6,947	3,435	3,512	4.2
GUINOBATAN	15	2,855	9,923	4,995	4,928	3.5
MALILIPOT	3	701	2,686	1,347	1,339	3.8
SANTO DOMINGO	3	1,998	7,557	3,902	3,655	3.8
CITY OF LIGAO	4	869	3,844	2,001	1,843	3.9
Grand Total	41	11,096	42,897	21,741	21,156	3.9

Since September 17, 2014, over 42,897 individuals have been pre-emptively evacuated to evacuation centers across the province of Albay as a result of the Alert Level 3 raised on the volcano's seismic activities. Alert Level 3 means a hazardous eruption is possible within weeks. From the first movement, an average of 2,000 persons have moved to the evacuation center everyday within the span of 20 days.

Prior planning by the local government unit (LGU) already identified barangays where the affected populations will be hosted. Around 86% of the displaced population was evacuated to displacement sites –primarily in public schools in nearby barangays within the same municipality.

This allowed the affected barangay's political structure to stay intact with barangay officials and other members of the local governance mechanism evacuating to the same site. It is therefore likely that in each site, responsibility is shared between the host and the displaced community.

The trend shows that in some host barangays, the number of IDPs is higher than the host population which can have implications on the budgetary factors and political dynamics.

IDP sites for Mayon are large sites. Each site hosts an average of 1,050 persons, with 40% of the sites above the average number. The sites of Mayon are larger compared to the sites of other natural disaster-driven migration. At the peak of the displacement of Haiyan in 2013, Region VIII has an average of 1:150, and Bopha with 1:200 site to person ratio. Furthermore, 1 in every 2 persons in the 29 affected barangays is displaced and now residing in the evacuation centers. The next table shows the number of displaced persons by barangay of origin.

The barangay officials of the evacuees' barangay of origin still assist in the management and provision of services in the evacuation centers. Shown is the Chairman of barangay Salug, Camalig in Baligang Elementary School EC in barangay Baligang where their constituents are being accommodated.

Section II: Detailed Information from the Surveyed Sites

The next sections provide detailed information from the surveyed sites with the list of the tables as follows:

1. Site Details
2. Demographic Data and Vulnerable Groups
3. Camp Coordination and Camp Management (CCCM) and Shelter
4. Food and Nutrition
5. Water Sanitation and Hygiene (WASH)
6. Health, Education and Protection

Key Indicators were chosen to present a snapshot of the situation of the evacuation center which the strengths and positive observation and the gaps and needs.

LGUs included fresh meat and vegetables in food distributions ©IOM 2014

Temporary latrines and bathing cubicles were installed for the evacuees in Binatangan EC, Ligao to meet their needs. ©IOM 2014

Charisma function hall and rooms used as evacuation center in Guinobatan ©IOM 2014

Health Stations in evacuation centers were managed by the Provincial Health Office staff (East Central School EC, Guinobatan) ©IOM 2014

24/7 monitoring and security services for majority of the ECs visited. (West Central School EC, Guinobatan) ©IOM 2014

Most of the evacuees bought stoves and cooked outside the classrooms they occupy (West Central School EC, Guinobatan) ©IOM 2014

Conclusions and Recommendations

This assessment was done twenty days after since the opening of the evacuation centers and already there is a total of 42,897 persons receiving basic services within the ECs.

Local experience and knowledge shows that the current displacement situation could be extended upwards to a minimum of three months or more.

Even if the population of evacuees does not increase from this point, the maintaining of these ECs with the appropriate services for a foreseeable prolonged time period could hamper the LGU and PLGUs resources to address these needs with no clear timeline in sight as it is dependent on the outcome of the volcanic activity of Mt. Mayon

Sites are managed by various government institutions including DepEd, MSWDO/CSWDO, Barangay LGU and AHEM-PHO ©IOM 2014

Among the recommendations on the current situation:

1. Inventory of all basic needs of the evacuees prioritizing food, water and health needs assuming the situation continues for at least three more months.
2. Provide potential donors from local, national and international organization with the inventory of needs to inform them on the areas where they can give assistance and support the LGU and PLGU.
3. Monitor the situation of vulnerable groups among the evacuees in order highlight needs or gaps and dissemination of these updates among potential donors who are concerned for these groups.
4. Provide Camp Coordination and Camp Management (CCCM) Training to all parties assisting in managing the evacuation centers.
5. Ensuring that the ECs are managed properly and the needs of the affected population will be addressed in the appropriate manner as these occur, over the expected displacement period.
6. Provide orientation to Joint Memorandum Circular of DILG, DOH, DepEd and DSWD on Evacuation Center Coordination and Management
7. Orientation on Sphere Standards as basis for planning additional facilities needed.
8. Search for options to construct these facilities using local resources and inexpensive materials.
9. Search for shelter solutions that will decrease the need to use schools to host more families.
10. Organize the evacuees in evacuation centers to have central leadership and initiate committees to assist authorities in managing evacuation sites.
