

BASELINE MOBILITY ASSESSMENT

**HELMAND
SUMMARY RESULTS
ROUND 7 • OCT – DEC 2018**

ABOUT DTM

The Displacement Tracking Matrix (DTM) is a system that tracks and monitors displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route. For more information about DTM in Afghanistan, please visit www.displacement.iom.int/afghanistan.

In Afghanistan, DTM employs the Baseline Mobility Assessment tool, designed to track mobility, determine the population sizes and locations of forcibly displaced people, reasons for displacement, places of origin, displacement locations and times of displacement, including basic demographics, as well as vulnerabilities and priority needs. Data is collected at the settlement level, through key informant interviews, focus group discussions, and direct observations.

DTM enables IOM and its partners to deliver evidence-based, better targeted, mobility-sensitive and sustainable humanitarian assistance, reintegration, community stabilization and development programming.

5 TARGET POPULATIONS

Through the Baseline Mobility Assessments, DTM tracks the locations, population sizes, and cross-sectoral needs of five core target population categories:

- 1. Returnees from Abroad**
Afghans who had fled abroad for at least 6 months and have now returned to Afghanistan
- 2. Out-Migrants**
Afghans who moved or fled abroad
- 3. Fled IDPs**
Afghans from an assessed village who fled as IDPs to reside elsewhere in Afghanistan
- 4. Arrival IDPs**
IDPs from other locations currently residing in an assessed village
- 5. Returned IDPs**
Afghans from an assessed village who had fled as IDPs in the past and have now returned home

Data on population sizes for the 5 target population categories is collected by time of displacement, using each of the following time frames: 2012-2015 • 2016 • 2017 • 2018.

HIGHLIGHTS

-  **13** districts assessed
-  **2,122** key informants interviewed
-  **89,724** returnees from abroad [2012-2018]
-  **344,449** IDPs [2012–2018] currently in host communities
-  **511,057** former IDPs have returned to their homes [2012–2018]
-  **51,891** out-migrants fled abroad [2012–2018]
-  **1,125** out-migrants fled to Europe (2% of out-migrants)
-  **7,677** returnees and IDPs live in tents or in the open air
-  **1 in 5** 19% of families have no access to schools – Helmand has the greatest need of schools nationwide
-  **1 in 4** persons in Helmand is either an IDP or Returnee – Helmand has the 3rd highest inflow of IDPs and Returnees nationwide
-  **107,503** individuals have no access to markets
-  **171,429** individuals have no access to health services
-  **3 in 5** 58% of all returnees and IDPs reside in Lashkargah district
-  **205,251** arrival IDPs reside in informal settlements – Helmand has the most IDPs living in Informal settlement nationwide

One of the main barriers to education in Helmand is the lack of school infrastructure. Most children in Helmand do not have access to proper buildings, like these children studying in open air. © IOM 2018

METHODOLOGY

The overall objective of DTM's Baseline Mobility Assessment in Afghanistan is to track mobility and displacement, provide population estimates, locations and geographic distribution of displaced, return and migrant populations, as well as refugees, nomads, cross-border tribal groups, and both domestic and international labour migrants. DTM captures additional mobility information, including reasons for displacement and return, places of origin and destination, times of displacement and return, secondary displacements, and population demographics, vulnerabilities and multi-sectoral needs.

DTM predominantly employs enumerators who originate from the areas of assessment. Enumerators collect quantitative data at the settlement level, through focus group discussions with key informants (KIs). Through direct observations, enumerators also collect qualitative data on living conditions, basic services, and security and socio-economic situation.

Due to security risks, enumerators cannot carry smart-phones or tablets in the field, therefore they collect data, daily, using a paper-based form, which is pre-filled with data from the previous round for verification of existing data and to expedite the assessment process. Completed forms are submitted weekly to the provincial DTM office and verified for accuracy by the team leader and data entry clerk. Once verified, the data is entered electronically via mobile devices, using KoBo forms, and submitted directly into DTM's central SQL server in Kabul, where it is systematically cleaned and verified daily, through automated and manual systems. This stringent review process ensures that DTM data is of the highest quality, accuracy and integrity.

When DTM assesses a province for the first time, enumerators collect data through two rounds of two-layered assessments:

1. District-level assessment (B1): this assessment aims to identify settlements with high inflows and outflows of Afghan nationals and provide estimated numbers of each target population category.
2. Settlement-level assessment (B2): based on the results of B1, this assessment collects information on inflows and outflows of each target population category at each settlement (village), identified through B1. Additional villages are also identified and assessed, based on referrals from KIs.

Since DTM has now assessed all 34 provinces, only settlement-level assessments will be conducted in the future. Pending continued funding, DTM aims to conduct baseline mobility assessments, nationwide, twice per year.

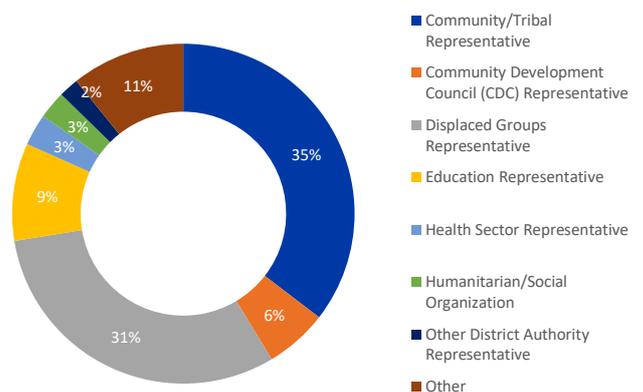

KEY INFORMANTS

DTM's field enumerators collect data at the settlement level, predominantly through focus group discussions with key informants. While assessing communities, enumerators also observe the living conditions and availability of multi-sectoral services. In the rare case that DTM's District Focal Points cannot physically reach a community, due to insecurity, conflict, or risk of retaliation, DFPs meet the focus groups at safe locations outside their communities or conduct the assessments by phone.

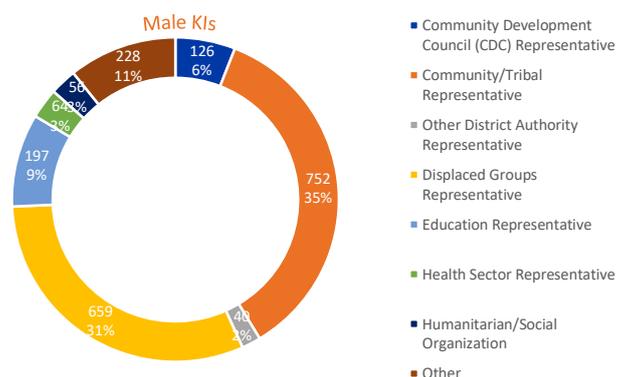

By actively recruiting more female enumerators, though challenging, DTM has made significant strides to improve gender inclusion in focus group discussions, although there is much room for improvement. There were no female key informants interviewed in Helmand province due to the highly sensitive issue of women's interaction with men in the province.

2,122 key informants (KIs) interviewed	659 key informants are IDPs or returnees (31%)
0 female key informants	752 KIs from host communities (35%)
2,122 male key informants (100%)	317 KIs from multi-sectoral and social services (15%)
7.3 average number of KIs per focus group	166 KIs from local authorities (8%)

Key Informants by Type and Sex | Helmand

RETURNNEES

Returnees are Afghan nationals who have returned to Afghanistan in the assessed location after having spent at least six months abroad. This group includes both documented returnees (Afghans who were registered refugees in host countries and then requested voluntary return with UNHCR and relevant national authorities) and undocumented returnees (Afghans who did not request voluntary return with UNHCR, but rather returned spontaneously from host countries, irrespective of whether or not they were registered refugees with UNHCR and relevant national authorities).

The number of returnees from abroad to Helmand increased by 72% in 2016 compared to the time period from 2012 to 2015. In 2017, however, there was 65% decrease compared to previous year. This trend continue in 2018 with a 35% decrease.

89,724
returnees from abroad

68,603
returned from Pakistan (76%)

ARRIVAL IDPs

Arrival IDPs (IDPs) are Afghans who fled from other settlements in Afghanistan and have arrived and presently reside at the assessed location / host community, as a result of, or in order to avoid, the effects of armed conflict, generalized violence, human rights violations, protection concerns, or natural and human-made disasters.

+ ►► **TOTAL INFLOW** [RETURNEES + ARRIVAL IDPs]

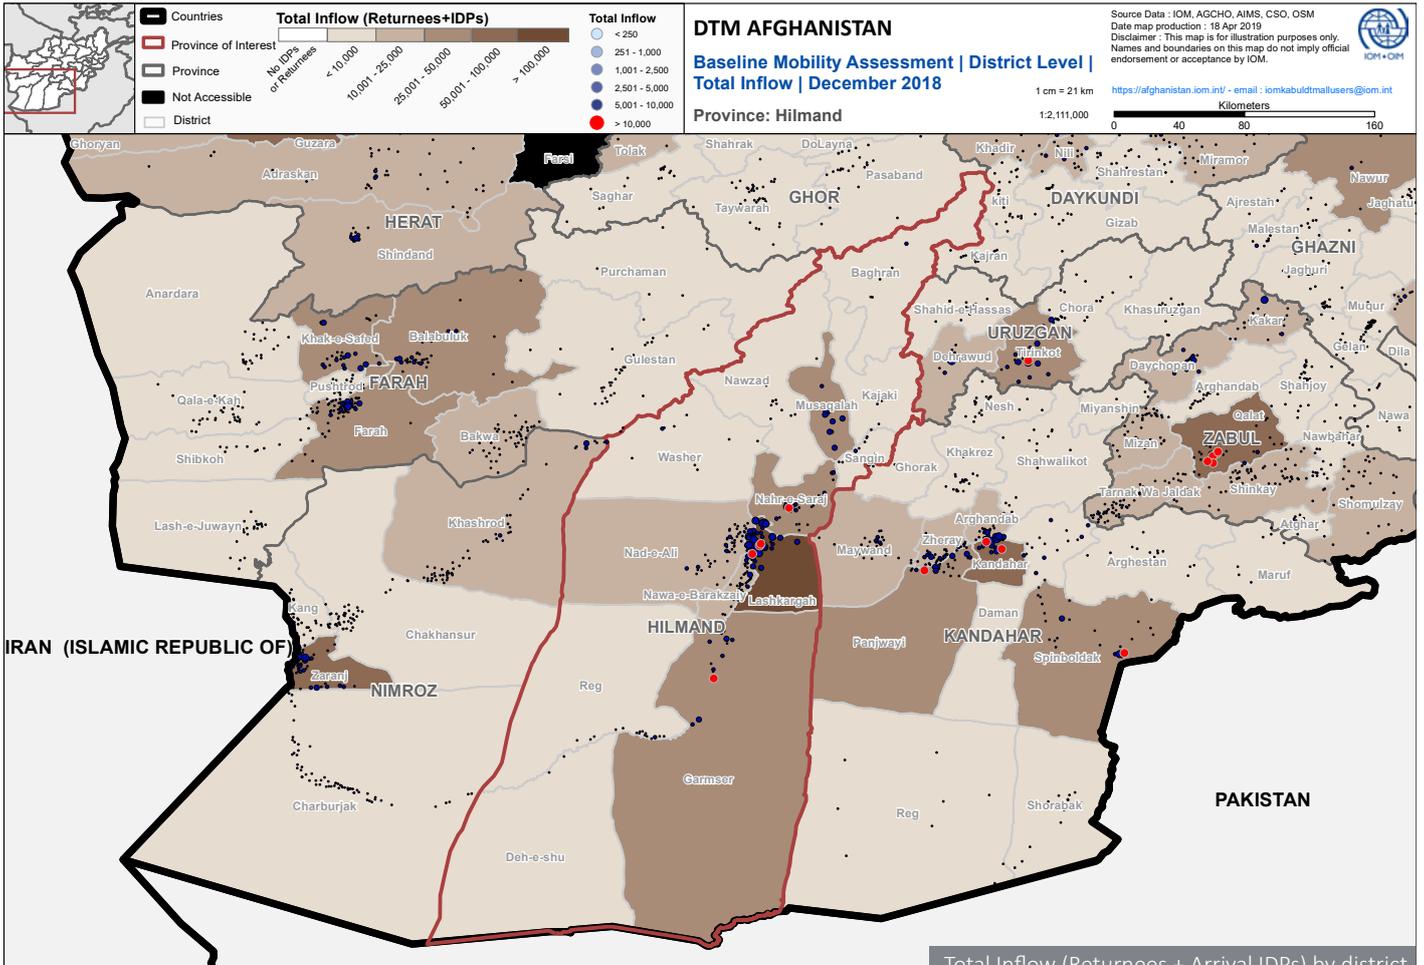

Overall, Helmand province hosts a total inflow of 434,173 returnees and IDPs, of which 21% (89,724) are returnees and 79% (344,449) are IDPs. The table below shows the 20 settlements in Helmand that are most affected by this influx. These 20 settlements (6% of the 291 settlements assessed in Helmand) host 47% of the province’s returnees and IDPs. These communities are especially fragile and susceptible to social instability induced by this large influx and the subsequent competition for limited, already overstretched resources and job opportunities. 16 of the 20 most affected settlements are in Lashkargah district, which have 82% (168,778) of the returnees and IDPs from this group.

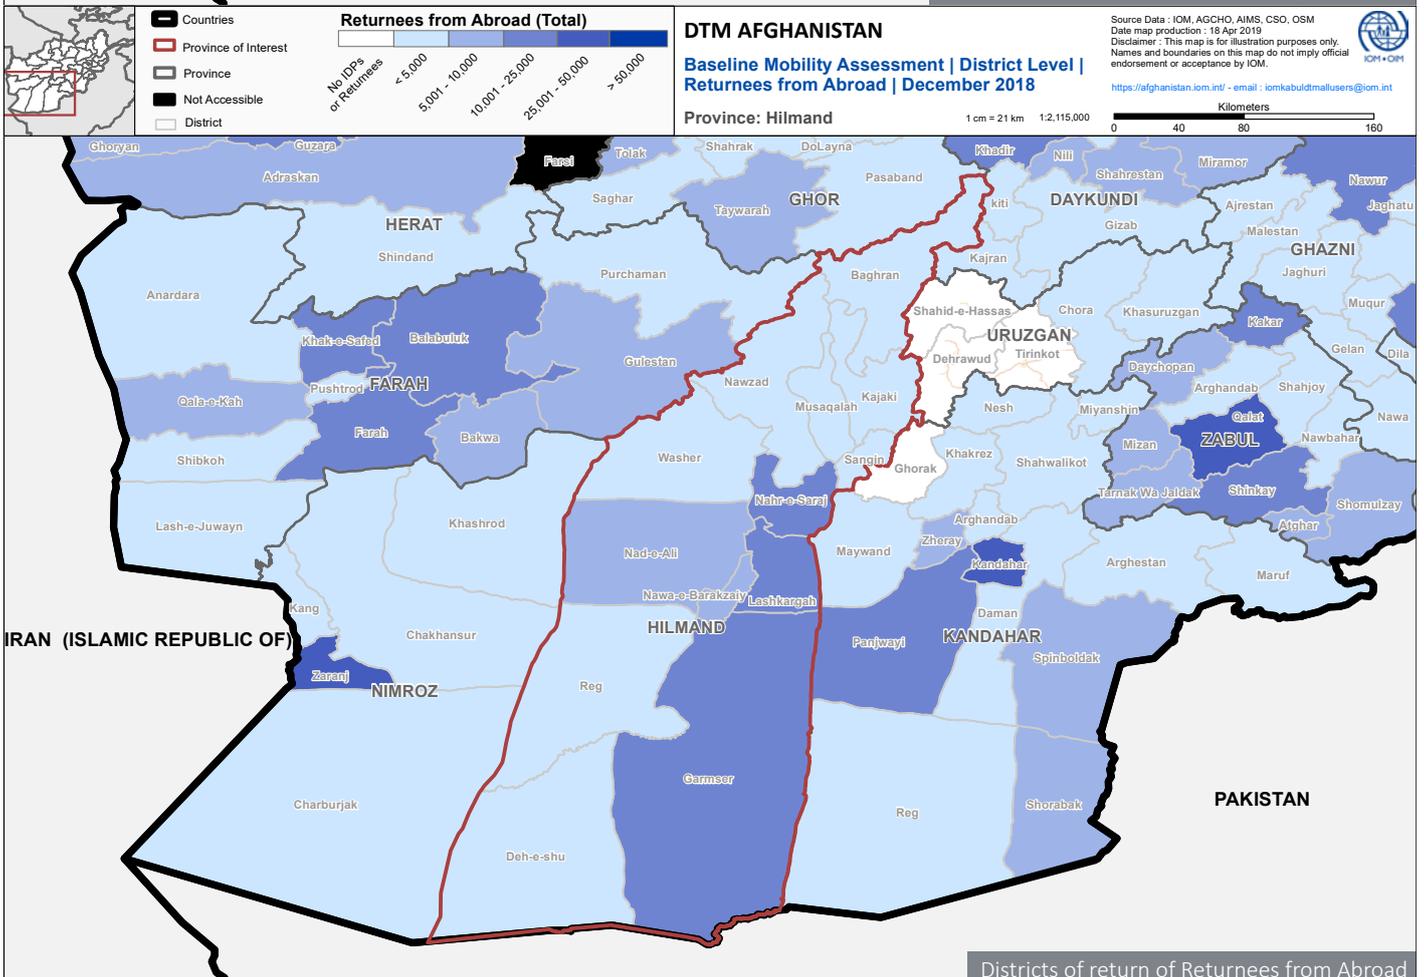

Rank	Settlement	District	Individuals
1	Karta-e- Lagan	Lashkargah	65,743

STORIES FROM THE DISPLACED

The Accident that Costs Him His Family

Sayed Matin Agha is from Dashti Bolan in Lashkargah district. For a year and half, there was heavy fighting between government forces and insurgents in his district. He and his thirteen family members fled along with the other villagers to a safer location within the province. Searching for a safe place, they found that there no room left in the government-run camp and renting a house proved too costly for Sayed Matin.

After a long period of struggling to find housing, he moved with his family to Nimroz province to be closer to other relatives who live there. They are among the 292,556 fled IDPs from Helmand province. However, sayed could not find any work in Nimroz and they were forced to borrow money from relatives.

After the conflict in his village ended, Sayed Matin wanted to move his family back to the village. When he returned home, he saw that his village was severely damaged and that homes were riddled with bullets from the fighting. Regardless, he called his son to bring the family back to Dashti Bolan.

On November 14th, 2017, whilst his family was returning to their place of origin from Nimroz province — their vehicle was involved in a very serious car crash. Eleven of his family members were killed instantly. The only survivor was his grandson, who still suffers from accident-related medical conditions.

80-year old Sayed Matin now lives with his wife, who was with him at the time of the accident, and his grandson in Dashti Bolan. He is yet to receive any assistance or reparations for the accident.

**Please note that the names have changed and village locations have been kept anonymous to protect the identity of the interviewee.*

Sayed Matin Agha, who has lost 11 members of his family whilst they were returning to their village, is awaiting assistance to pay for medical assistance for his only surviving grandson . © IOM 2018
