

BASELINE MOBILITY ASSESSMENT

**KANDAHAR
SUMMARY RESULTS
ROUND 7 • OCT – DEC 2018**

Shelter needs are high in Kandahar, especially among IDPs living in Maywand District. © IOM 2018

ABOUT DTM

The Displacement Tracking Matrix (DTM) is a system that tracks and monitors displacement and population mobility. It is designed to regularly and systematically capture, process and disseminate information to provide a better understanding of the movements and evolving needs of displaced populations, whether on site or en route. For more information about DTM in Afghanistan, please visit www.displacement.iom.int/afghanistan.

In Afghanistan, DTM employs the Baseline Mobility Assessment tool, designed to track mobility, determine the population sizes and locations of forcibly displaced people, reasons for displacement, places of origin, displacement locations and times of displacement, including basic demographics, as well as vulnerabilities and priority needs. Data is collected at the settlement level, through key informant interviews, focus group discussions, and direct observations.

DTM enables IOM and its partners to deliver evidence-based, better targeted, mobility-sensitive and sustainable humanitarian assistance, reintegration, community stabilization and development programming.

5 TARGET POPULATIONS

Through the Baseline Mobility Assessments, DTM tracks the locations, population sizes, and cross-sectoral needs of five core target population categories:

- 1. Returnees from Abroad**
Afghans who had fled abroad for at least 6 months and have now returned to Afghanistan
- 2. Out-Migrants**
Afghans who moved or fled abroad
- 3. Fled IDPs**
Afghans from an assessed village who fled as IDPs to reside elsewhere in Afghanistan
- 4. Arrival IDPs**
IDPs from other locations currently residing in an assessed village
- 5. Returned IDPs**
Afghans from an assessed village who had fled as IDPs in the past and have now returned home

Data on population sizes for the 5 target population categories is collected by time of displacement, using each of the following time frames: 2012-2015 • 2016 • 2017 • 2018.

HIGHLIGHTS

Due to funding limitations and comparatively lesser presence of IDPs and returnees, Kandahar was not assessed in 2018. Therefore, there is no 2018 data to report and, consequently, all of the charts in this report show a value of zero for 2018.

-  **16** districts assessed
-  **384** settlements assessed
-  **2,096** key informants interviewed
-  **76,388** returnees from abroad [2012-2018]
-  **181,511** IDPs [2012-2018] currently in host communities
-  **87,992** former IDPs have returned to their homes [2012-2018]
-  **16,559** out-migrants fled abroad [2012-2018]
-  **156** out-migrants fled to Europe (1% of out-migrants)
-  **11,946** returnees and IDPs live in tents or in the open air – Kandahar has the 4th highest need of shelter nationwide
-  **1 in 4** 24% of families have no access to schools – Kandahar has the 2nd greatest need of schools nationwide
-  **97,080** individuals have no access to markets
-  **2 in 5** 37% of all returnees and IDPs in Kandahar reside in Kandahar district
-  **23,571** individuals (63%) in Spinboldak District have no access to potable water

Kandahar has high shelter needs — many IDP and returnee families are currently living in open air without any shelter. Like this family in Maywand District, many do not even have a tent to live in. © IOM 2018

METHODOLOGY

The overall objective of DTM's Baseline Mobility Assessment in Afghanistan is to track mobility and displacement, provide population estimates, locations and geographic distribution of displaced, return and migrant populations, as well as refugees, nomads, cross-border tribal groups, and both domestic and international labour migrants. DTM captures additional mobility information, including reasons for displacement and return, places of origin and destination, times of displacement and return, secondary displacements, and population demographics, vulnerabilities and multi-sectoral needs.

DTM predominantly employs enumerators who originate from the areas of assessment. Enumerators collect quantitative data at the settlement level, through focus group discussions with key informants (KIs). Through direct observations, enumerators also collect qualitative data on living conditions, basic services, and security and socio-economic situation.

Due to security risks, enumerators cannot carry smart-phones or tablets in the field, therefore they collect data, daily, using a paper-based form, which is pre-filled with data from the previous round for verification of existing data and to expedite the assessment process. Completed forms are submitted weekly to the provincial DTM office and verified for accuracy by the team leader and data entry clerk. Once verified, the data is entered electronically via mobile devices, using KoBo forms, and submitted directly into DTM's central SQL server in Kabul, where it is systematically cleaned and verified daily, through automated and manual systems. This stringent review process ensures that DTM data is of the highest quality, accuracy and integrity.

When DTM assesses a province for the first time, enumerators collect data through two rounds of two-layered assessments:

1. District-level assessment (B1): this assessment aims to identify settlements with high inflows and outflows of Afghan nationals and provide estimated numbers of each target population category.
2. Settlement-level assessment (B2): based on the results of B1, this assessment collects information on inflows and outflows of each target population category at each settlement (village), identified through B1. Additional villages are also identified and assessed, based on referrals from KIs.

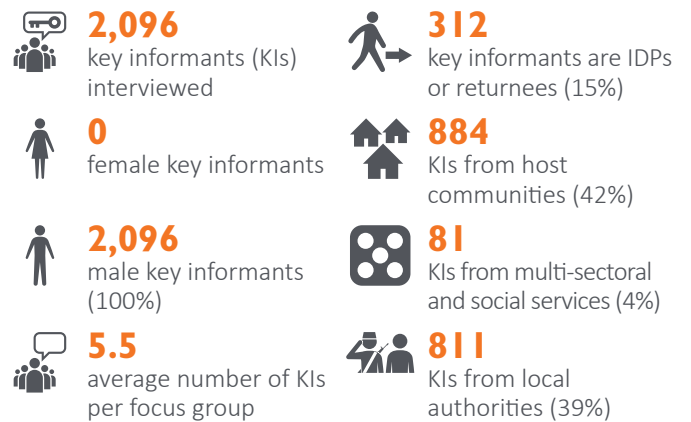

Since DTM has now assessed all 34 provinces, only settlement-level assessments will be conducted in the future. Pending continued funding, DTM aims to conduct baseline mobility assessments, nationwide, twice per year.

KEY INFORMANTS

DTM's field enumerators collect data at the settlement level, predominantly through focus group discussions with key informants. While assessing communities, enumerators also observe the living conditions and availability of multi-sectoral services. In the rare case that DTM's District Focal Points cannot physically reach a community, due to insecurity, conflict, or risk of retaliation, DFPs meet the focus groups at safe locations outside their communities or conduct the assessments by phone.

By actively recruiting more female enumerators in country level, though challenging, DTM has made significant strides to improve gender inclusion in focus group discussions, although there is much room for improvement. In addition, there were no female key informants in Kandahar, due to social norms and sensitivities.

Key Informants by Type and Sex | Kandahar

RETURNNEES

Returnees are Afghan nationals who have returned to Afghanistan in the assessed location after having spent at least six months abroad. This group includes both documented returnees (Afghans who were registered refugees in host countries and then requested voluntary return with UNHCR and relevant national authorities) and undocumented returnees (Afghans who did not request voluntary return with UNHCR, but rather returned spontaneously from host countries, irrespective of whether or not they were registered refugees with UNHCR and relevant national authorities).

The number of returnees from abroad to Kandahar decreased by 53% in 2016 compared to the period between 2012 and 2015. In 2017, there was a further decrease of 25%. Kandahar was not assessed in 2018; therefore, there is no returnee data to report (all 2018 values on the charts are 0).

ARRIVAL IDPs

Arrival IDPs (IDPs) are Afghans who fled from other settlements in Afghanistan and have arrived and presently reside at the assessed location / host community, as a result of, or in order to avoid, the effects of armed conflict, generalized violence, human rights violations, protection concerns, or natural and human-made disasters. Kandahar was not assessed in 2018; therefore, there is no IDP data to report (all 2018 values on the charts are 0).

+ **TOTAL INFLOW** [RETURNEES + ARRIVAL IDPs]

Total Inflow (Returnees + IDPs) | Kandahar

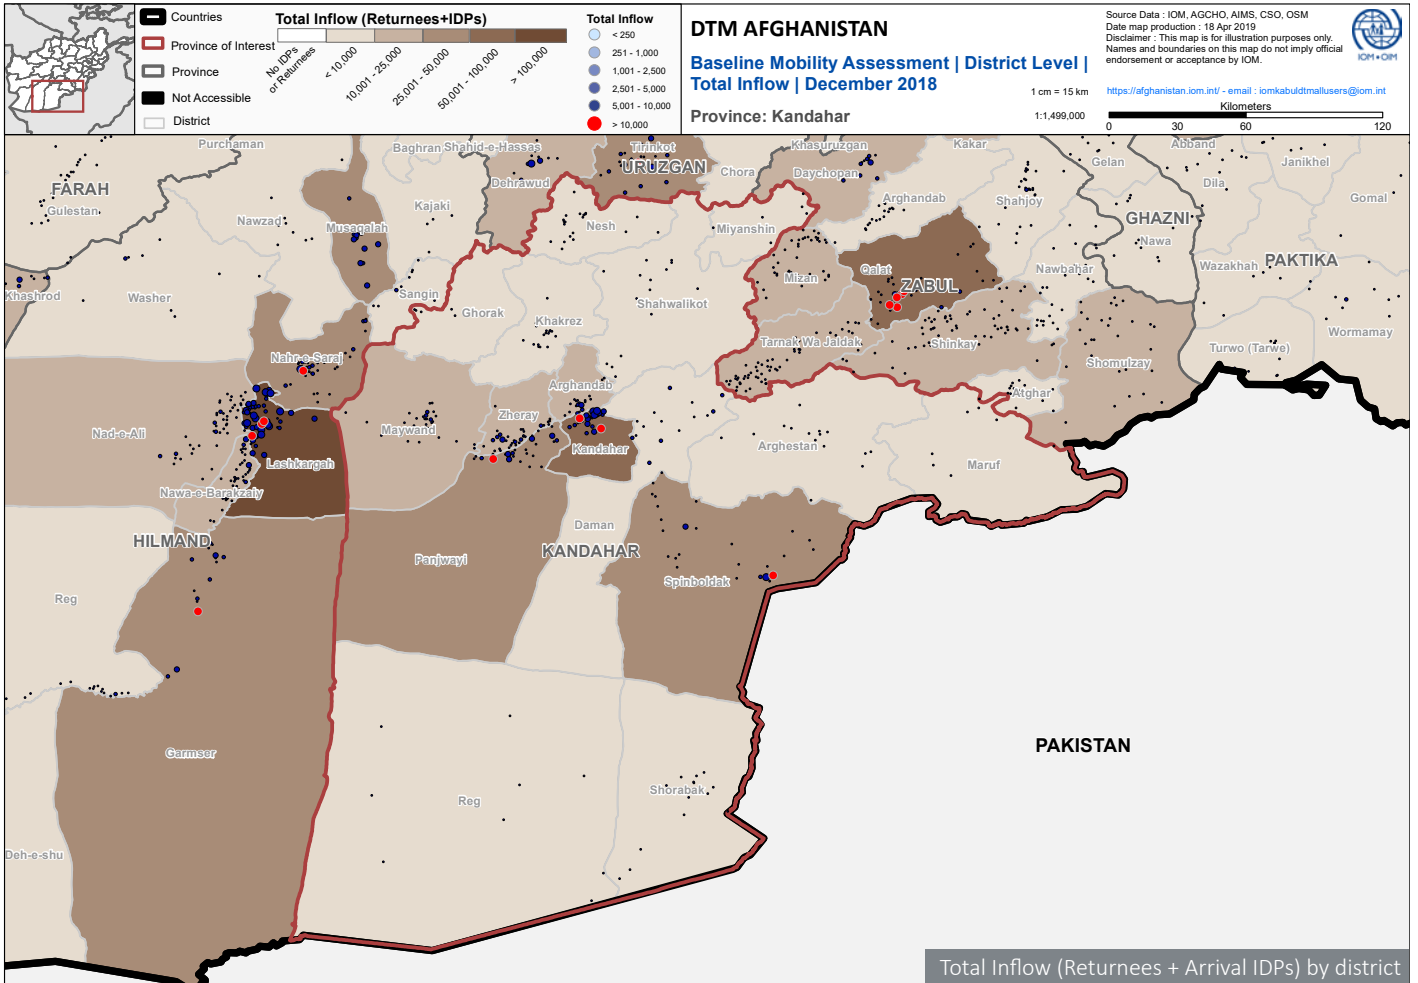

Overall, Kandahar province hosts a total inflow of 257,899 returnees and IDPs, of which 30% (76,388) are returnees and 70% (181,511) are IDPs. The table below shows the 20 settlements in Kandahar that are most affected by this influx. These 20 settlements (5% of the 384 settlements assessed in Kandahar host 50% of the province’s returnees and IDPs. These communities are especially fragile and susceptible to social instability induced by this large influx and the subsequent competition for limited, already overstretched resources and job opportunities. 13 of the 20 most affected settlements are in Kandahar district, which have 56% (72,032) of the returnees and IDPs from this group.

FLED IDPS

Fled IDPs are Afghans who have fled from an assessed location or settlement within which they previously resided and now currently reside in a different settlement in Afghanistan, as a result of, or in order to avoid, the effects of armed conflict, generalized violence, human rights violations, protection concerns, or natural and human-made disasters. Kandahar was not assessed in 2018; therefore, there is no IDP data to report (all 2018 values on the charts are 0).

STORIES FROM THE DISPLACED

Former Prisoner and Refugee Happy About Returning Home

Noorullah Durani lives in a small town in Kandahar province, close to the Pakistan border, in an area where there is a lot of cross-border transport and trade. The area is also a hotbed for insurgent activity, and in 2011 insurgents attacked his village, blocking off roads and capturing hundreds of civilians, including Noorullah.

Noorullah was consequently arrested and sent to prison for 24 days. In the meantime, his family was suffering the adverse impact of insurgents' occupation—lack of access to food and medical clinics and the temporary closure of shops and local businesses. After Noorullah was released from prison, he and his wife and children left Afghanistan for Quetta, Pakistan.

After being arrested by border officials in Pakistan, the family had to pay a bribe in order to avoid deportation. Noorullah started to work as a bricklayer, where he earned \$3 per day — not enough for all family expenses. His family's expenses include food, rent and medicine for his younger daughter who had recently been diagnosed with pneumonia.

In 2016, they were arrested by Pakistani officials and deported back to Afghanistan. They were among the 17,918 returnees from Pakistan returning that year. They returned to their village that, to their great surprise and joy, had undergone a positive transformation. Roads, markets, and local services were open and could be accessed safely. Noorullah was able to start working on his former land and his children were readmitted to school.

The Durani family consider themselves blessed and fortunate to be safe and comfortable back in their hometown.

**Please note that the names have changed and village locations have been kept anonymous to protect the identity of the interviewee.*

Noorullah is happy that he returned with his family from Pakistan to Kandahar, because he can now work and send his children to school. © IOM 2018
