# DASHBOARD IOM UGANDA Ebola Virus Disease PoE Preparedness at Screening Points – BUNDIBUGYO District

Period: From 1-12-2019 to 31-12-2019

## DETAILS PER POE

The type of flows is influenced by an array of factors such as; the land configuration (mountainous, forest...) and the type of PoE (formal or informal), the type of access road (main road or rural road) as well as the reason for travelling. The presence of markets and agricultural activities acts as a pull factor and may attract more female than male adults.

It is worth noting that the high influx of children under 5 years in Mulungitanuwa 1B and other PoEs in Bundibugyo is attributable to children crossing with their mothers or in company of an adult female going for agricultural activities or trade activities.
