- No screening
- Active Screening
- Smartphone provided
- Laptop provided
- Data Manager
- Tent/Shelter
- Infrared Thermo. provided

Children

Males: XX

Females: XX

XX Number of screenings Democratic Republic of the CONGO

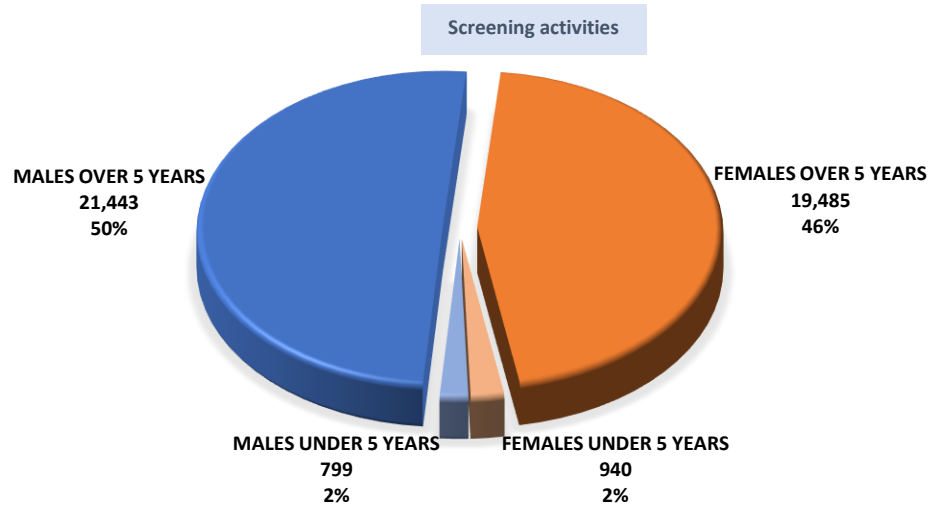

Overview

Screening operation

- Two (2) of the referenced Points of Entry (PoEs) had active screening activities during the reporting period. One (1) of them is an official PoE (Ishasha2).
- A total of 42,667 people were screened through two (2) PoEs during the reporting period.
- 23,511 persons were registered in Munyaga1 and 19,156 in Ishasha2.

Demographic

- Ratio of adult males and adult females was 50:46.
- More adult males than adult females crossed at Ishasha2 (56%) mainly due to cross-border trading activities at Ishasha2 official PoE.
- 4% of the registered flow were children under 5 years old. The children under 5 years old were mostly in the company of female parents or relatives that were crossing to Kanungu to trade.

The type of flows is influenced by the land configuration (mountainous, forest...) and the type of PoE (formal or informal). The type of access road (main road or rural road) influences the type of flow as well as the reason for travelling. The presence of markets and agricultural activities is a pull factor and may attract more adult women than men.
