

# Abrouc and Fashoda

Market Assessment | 28 March - 04 April 2017

The International Organization for Migration (IOM) Displacement Tracking Matrix (DTM) team conducted a market assessment in Abrouc from 28 March – 4 April. The objective of the market assessment was to understand the available food commodities and shelter materials for the Abrouc area and their prices in order to assess the affordability of the commodities and materials for the internally displaced persons (IDPs) staying in Abrouc. Assessment findings indicate that shelter materials are unaffordable for majority of the IDPs as total cost can add up to 3,500 SSP to 5,000 SSP on average to make one shelter.
