FLOW MONITORING

MARCH 2021

14,082 Total movements observed at all FMPs

1,433 Movements observed at Obock

42 Entries from Djibouti's western borders

2,343 Arrivals from Yemen (*)

OVERVIEW

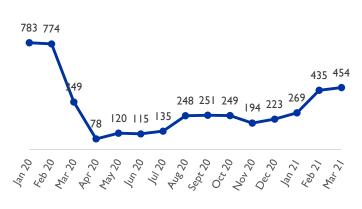

During the month of March 2021, 14,082 movements were observed at flow monitoring points in Djibouti representing a daily average of 454 movements. This is a 4% increase from the 435 average daily movements observed in Februrary 2021.

Of these 14,082 movements, 10% were observed at Obock. This coastal region of Djibouti is used by migrants traveling to the Arab Peninsula, crossing the Gulf of Aden on boats along the Eastern Route.

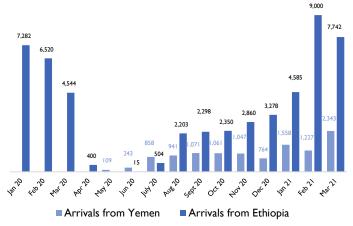

From January 2020 to June 2020, the number of entries from Djibouti's western borders decreased by 99% due to the closure of Ethiopian borders. Since Djibouti and Ethiopia resumed land services in July, the number of entries from Ethiopia have increased sharply; they went from 504 movements observed in July 2020 to 7,742 in March 2021.

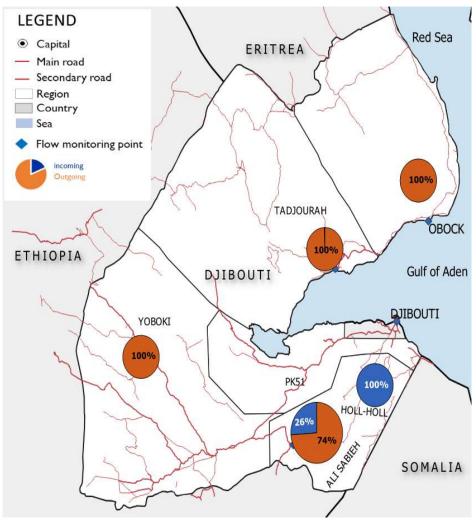

At the same time, due to movement restrictions due to COVID-19 in Yemen and Saudi Arabia, more than 11, 222 Ethiopians have returned from Yemen since May 2020. Between May 2020 and February 2021, the number of arrivals from Yemen has been multiplied by 21, from 109 in May 2020 to 2.343 in March 2021.

FLOW MONITORING

MARCH 2021

During the month of March 2021, the main intended final destinations were Yemen (35%), the Kingdom of Saudi Arabia (32%), Ethiopia (19%) and Djibouti (14%). The majority of the observed population were male (70% adults and 19% children), while 11% of identified persons were female (8% adults and 3% children). The identified persons were mainly travelling by foot (71%), for economic reasons (94%) and others returned home (9%).

ARRIVALS FROM ETHIOPIA

During the month of March 2021, the number of entries from Djibouti's western borders increased to 7,742 compared with 9,000 observed last month. From June 2020 to February 2021, 34,835 arrivals from Ethiopia have been recorded.

34,835

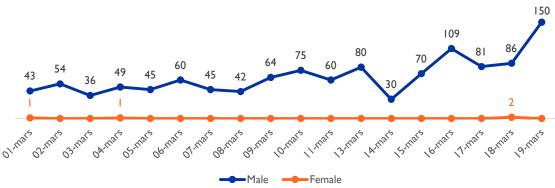

Arrivals from Ethiopia since June 2020

ARRIVALS FROM YEMEN

During the month of March 2021, a total of 2,343 migrants arrived from Yemen on the Djiboutian coast. The majority of the observed population were male (2,333), while 10 were female. From May 2020 to March 2021, 11,222 arrivals were recorded from Yemen, in total 10,444 male and 778 female.

Arrivals from
Yemen since May
2020

Flow monitoring

Flow monitoring is a component of the IOM's Displacement Tracking Matrix (DTM). The objective of the flow monitoring component is to regularly provide updated information on population flows and on the profile of populations on the move (migrants, internally displaced persons, returnees, etc.). The information and analyzes offered by the flow monitoring methodology provide a better understanding of the difficulties encountered by migrants throughout their migratory route or forced displacement in order to better define priorities in terms of assistance.

Arrivals from Yemen

Arrivals from Yemen is a component of the IOM's Displacement Tracking Matrix (DTM) which started in May 2020. The objective of the arrivals from Yemen is to provide updated information on population flows returning from Yemen following COVID-19 movement restrictions in Yemen and the Kinggdom of Saudi Arabia. The information and analyzes offered by DTM provide a better understanding of the current ifficulties encountered by migrants throughout their migratory route. While the number of arrivals is gathered through a well established system, all arrivals cannot be captured due to the coastal loation of the arrivals, thus the number of arrivals from Yemen is most probably higher.

DTM in Djibouti

IOM works in collaboration with the Government of Djibouti to better understand the migratory dynamics in Djibouti as well as the profile of migrants transiting the country. IOM implements flow monitoring, a DTM component which consists in collecting data in the localities through which migrants' transit (flow monitoring points). The data presented in this monthly report gives an overview of the movements and profiles of the mobile population in Djibouti.

Limitation

The spatial and temporal coverage of the surveys carried out is partial and does not allow all migratory flows in the country to be captured. The data presented in this report mainly shows migration trends. In addition, the data on the vulnerabilities are based on direct observations by the enumerators and should only be taken as an indication. Finally, it is possible that migrants crossing several flow monitoring points may be counted several times. Thus, the total number of migrants observed at the flow monitoring points does not necessarily reflect the true migratory flows in each region. All data included in this report are based on partial observations and are not representative of the entire migrant population. IOM guarantees the data included in this report; however we cannot give a complete picture of migratory movements.

MIGRATORY ROUTES THROUGH DJIBOUTI

The activities of the Displacement Tracking Matrix (DTM) are funded by:
