

The DTM Emergency Event Tracking (EET) is deployed to track sudden displacement and population movements, provide more frequent updates on the scale of displacement, and quantify the affected population when needed. As a subcomponent of the new Mobility Tracking methodology in Sudan ([Round Two](#)), and activated on a need basis, EET utilises a broad network of key informants to capture best estimates of the affected population presence per location – a useful tool for humanitarian response planning and design.

Event Overview

DTM teams activated EET to monitor the displacement of individuals affected by inter-communal violence between the Al-Bani and Al-Sharfa tribes on 10 and 11 September 2021 in Wajage village, Mukjar locality. The first EET update estimates a total number of 2,545 individuals (450 households) currently seeking shelter in Buru village (100%) in Mukjar locality, Central Darfur. Data collected by the Shelter Indicator suggests that all households are currently staying in the host community or with host families.

Field teams indicate that there have been six deaths, three individuals are reported to be injured, and four individuals report lost goods, cattle, and/or livestock. All affected individuals are Sudanese nationals. DTM teams identified at least 517 cases of additional vulnerabilities in need of assistance and support. Based on a ranking scale, the three priority needs across the caseload are Emergency Shelter, Food, and Health (Medical Needs).
